Federal Bureau of Prisons
Psychology Data System

Date-Title: 05-26-2009 - Intake Screening
Reg Number-Name: 02775-093 - PEARLMAN, LOUIS J.
Author: HEATHER L. HORNE, PSYCHLGY PREDOCTORAL INTERN
Institution: COL - COLEMAN LOW FCI

TREATMENT/MENTAL HEALTH HISTORY:

Inmate **PEARLMAN** reported no treatment/mental health history

ABUSE HISTORY:

Inmate PEARLMAN reported no abuse history

MENTAL STATUS:

During the screening interview no mental status items were noteworthy.

His psychological stability for custody is judged to be **FAVORABLE** .

DRUG ABUSE HISTORY:

Inmate PEARLMAN does not report a history of substance abuse.

PROGRAM TREATMENT RECOMMENDATIONS:

No programs/treatment are recommended at this time.

Inmate PEARLMAN reported NO interest in participating programs/treatment.

COMMENTS:

Inmate Pearlman was seen for his Admission and Orientation intake screening. Limits of confidentiality were explained and he indicated his understanding. Information contained in this screening comes from inmate self-report, PDS, and SENTRY notes.

Inmate Pearlman is a 54 year-old single Caucasian male who denies children. He is currently serving a 25 year sentence with 3 years SRT for conspiracy to commit offenses against the U.S., money laundering, and false claims in bankruptcy. He has a PRD of 03-24-2029.

He denied a history of psychological treatment including psychotropic medications. He denied current or historical suicidal or homicidal ideation, intent, plan, or attempt. He denied a history of violence and SENTRY has no conflicting information. He denied head injury or seizure. He denied being the victim or perpetrator of sexual assault while in prison.

He reports no medical concerns at this time. He stated that he is "borderline diabetic and is receiving medications to care for this condition. He requested to whom he should place a cop out for "soft shoes". He was told to turn his cop out in to medical or he could go by on an open move.

He reported being a "social drinker" and defined this as 1-2 glasses of wine 1-2 times per week. He has SENTRY codes of DRG I NONE.

Inmate Pearlman was alert and oriented times four and free from overt psychosis. His thought processes appeared

linear, organized, and goal directed. His mood was euthymic with congruent affect. He was pleasant and cooperative throughout the session. He was appropriately groomed and dressed. His hygiene appeared adequate. His speech was clear and free from obvious impediment. His movements were unremarkable.

He denies difficulty adjusting to COL. A code of MDS does not appear warranted. No follow up is planned. He is aware of how to access psychological services should he need to do so.

BOP FOIA 2016-07384

Federal Bureau of Prisons
Psychology Data System

Date-Title: 09-05-2008 - SHU Review
Reg Number-Name: 02775-093 - PEARLMAN, LOUIS J.
Author: STANETTE PINNIX HALL, Pinnix Hal, DRUG ABUSE PROG COORD
Institution: ATL - ATLANTA USP

Inmate **PEARLMAN** was placed in the Special Housing Unit on **08-25-2008**. In accord with Discipline and SHU policy, a psychological review was conducted.

At the time of this review, inmate PEARLMAN was housed in the Special Housing Unit with a quarters assignment of **ADMIN. DETENTION** .

Inmate PEARLMAN was interviewed. Other staff members and/or available records were consulted as necessary and appropriate.

The findings of this review are:

MENTAL STATUS: Current mental status, emotional expression, and behavior do not suggest significant mental health problems.

ADJUSTMENT: Based on available information, current adjustment to Special Housing Unit appears to be **SATISFACTORY**

THREAT TO SELF: Precise prediction of self-injurious behavior is difficult and should be modified over time as individual circumstances change. Based on the inmate's history, existing conditions, and other information available at the time of the review, the current risk of self-harm is judged to be **LOW** .

THREAT TO OTHERS: Precise prediction of dangerousness is difficult and should be modified over time as individual circumstances change. Based on the inmate's history, existing conditions, and other information available at the time of the review, the current potential for harm to others is judged to be **LOW** .

Comments:

Inmate PEARLMAN was interviewed during routine rounds in SHU. He was oriented and coherent and showed no visible signs of a thought disorder or a mood disorder. He did not appear distressed and reported no current mental health concerns. He is aware of how to contact Psychology Services should he need to.

INFORMATION ON VACCINATION (CONSENT/DECLINATION) FOR INFLUENZA VACCINE

U.S. DEPARTMENT OF JUSTICE FEDERAL BUREAU OF PRISONS

Influenza Vaccine (Flu Shot) for 2008-2009 **(Year)**

NOTE: CONSULT THE CENTERS FOR DISEASE CONTROL FOR ANNUAL UPDATES CONCERNINGVACCINE INFORMATION

Influenza is a serious disease caused by a virus that spreads from infected persons to the nose or throat of others. The "influenza season" in the U.S. is from November through April each year. Influenza can cause fever, sore throat, cough, headache, chills, and muscle aches. People of any age can get influenza. Most people are ill with influenza for only a few days, but some get much sicker and may need to be hospitalized. Influenza causes thousands of deaths each year, mostly among the elderly. Influenza vaccine can prevent influenza. Influenza Vaccine Influenza viruses change often. Therefore, influenza vaccine is updated each year to make sure it is as effective as possible. Protection develops about 2 weeks after getting the vaccination and may last up to a year.

Persons who should receive the influenza vaccine:

Individuals in any of the following categories:

1. Chronic disorders of the cardiovascular or pulmonary systems,
2. Health individuals 65 years of age or older,
3. Adults with chronic metabolic diseases, including diabetes mellitus, renal dysfunction, anemia, or immunosuppression,
4. Anyone who has extensive contact with high risk individuals,
5. Pregnant women with a medical condition that increases the risk of complications from influenza (should be given after the first trimester),
6. Persons living in dormitories or in other crowded conditions, to prevent outbreaks,
7. Anyone who wants to reduce their chance of catching influenza.

Persons who should not receive the influenza vaccine:

1. Those who have allergic sensitivity to eggs, chicken feathers, chickens or chicken dander,
2. Those who have a hypersensitivity to any components of the vaccine,
3. Have a history of Guillain-Barre Syndrome (GBS),
4. Anyone with a current febrile illness.

When should I get influenza vaccine?

Because influenza activity can start as early as December, the best time to get influenza vaccine is during October and November. But getting the vaccine after November can still provide protection. A new vaccination is needed each year. Influenza vaccine can be given at the same time as other vaccines, including pneumococcal vaccine.

Can I get influenza even if I get the vaccine this year?

Yes. Influenza viruses change often, and they might not always be covered by the vaccine. But vaccinated people who do get influenza often have a milder case than those who did not get the injection. Also, many people call any illness with fever and cold symptoms "the flu." They may expect influenza vaccine to prevent these illnesses, but influenza vaccine is effective only against illness caused by influenza viruses, and not against other illnesses.

Name: Louis J. Pearlman	
Register No. 02775-093	SSN:
Institution USP/FPC ATLANTA	

BOP FOIA 2016-07384

What are the risks from influenza vaccine?

A vaccine, like any medicine, is capable of causing serious problems, such as severe allergic reactions. The risk of a vaccine causing serious harm, or death, is extremely small. Almost all people who get influenza vaccine have no serious problems. The viruses in the vaccine are killed, so you cannot get influenza from the vaccine. Mild problems include soreness, redness, swelling where the injection was given, fever, and body aches. If these problems occur, they usually begin soon after the vaccination and last 1-2 days. Life-threatening allergic reactions are very rare. If they do occur, it is within a few minutes to a few hours after the injection.

****

I, _____, have read the above statement about the influenzavaccination. I have provided with updated information and have had the opportunity to ask questions about the benefits and risks receiving this vaccination.

FOR WOMEN

Pregnancy can increase the risk for complications from the flu, and pregnant women are more likely to be hospitalized from complications of the flu than non-pregnant women of the same age. In previous worldwide outbreaks of the flu (pandemics of 1918-19 and 1957-58), deaths among pregnant women were associated with the flu. Pregnancy can change the immune system in the mother, as well as affect her cardiovascular system (heart and lung function). These changes may place pregnant women at increased risk for complications from the flu.

Because the flu vaccination is made from inactivated viruses (the viruses are killed), many experts consider flu vaccinations safe during any stage of pregnancy. However, since miscarriages (spontaneous abortion) most often occur in the first trimester of pregnancy, experts have traditionally not given a flu vaccination during the first trimester to avoid a coincidental association with miscarriage.

Women who will be beyond the first 3 months of pregnancy during the flu season should get a flu vaccination. Pregnant women who have medical problems that increase their risk for complications from the flu should get a flu vaccination before the flu season, no matter their stage of pregnancy.

_____ _____

Signature of the Recipient Signature of Witness

****

DECLINATION FOR VACCINE

I do not want to receive the influenza vaccination at this time.

Date-Title: 11-19-2009 - SHU Review
Reg Number-Name: 02775-093 - PEARLMAN, LOUIS J.
Author: DEXTER JAMES, Psy.D, STAFF PSYCH
Institution: COM - COLEMAN MED FCI

Inmate **PEARLMAN** was placed in the Special Housing Unit on **08-11-2009**. In accord with Discipline and SHU policy, a psychological review was conducted.

At the time of this review, inmate PEARLMAN was housed in the Special Housing Unit with a quarters assignment of **ADMIN. DETENTION** .

Inmate PEARLMAN was interviewed. Other staff members and/or available records were consulted as necessary and appropriate.

The findings of this review are:

MENTAL STATUS: Current mental status, emotional expression, and behavior do not suggest significant mental health problems.

ADJUSTMENT: Based on available information, current adjustment to Special Housing Unit appears to be **SATISFACTORY**

THREAT TO SELF: Precise prediction of self-injurious behavior is difficult and should be modified over time as individual circumstances change. Based on the inmate's history, existing conditions, and other information available at the time of the review, the current risk of self-harm is judged to be **LOW** .

THREAT TO OTHERS: Precise prediction of dangerousness is difficult and should be modified over time as individual circumstances change. Based on the inmate's history, existing conditions, and other information available at the time of the review, the current potential for harm to others is judged to be **LOW** .

Comments:

Inmate PEARLMAN was seen for a 30-day SHU review. He was alert, oriented, and did not appear to be responding to any internal stimuli. No significant mental health issues or concerns were reported, nor did he report experiencing any acute distress. He will contact Psychology Services on an as needed basis. Psychology Services will continue to monitor through regular rounds.

BOP FOIA 2016-07384

Attachment 1.3. Influenza-Like-Illness (ILI) Screening Form

This form should be used to when screening large groups for pandemic influenza, e.g., at intake or at triage/sick-call. Everyone's temperature should be taken, and an ILI Screening Form should be filled out for those with a temperature *greater than* 100.4°F (38°C).

Name PEARLMAN, LOUIS # 0275-093

Clinical Criteria for Influenza-Like Illness = In the context of circulating influenza in the community, a temperature greater than 100.4° F (38°C) *and* at least one of the following: cough, or sore throat, or shortness of breath.

1. **Temperature:** 98.4
   ☐ Fever greater than 100.4° F (38°C) Date onset of fever:_____

   AND

2. **At least one of these symptoms:**
   ☐ Cough
   ☐ Sore Throat
   ☐ Shortness of breath; if present check respiratory rate:_____
   ☑ None of the above

   ☐Other signs and symptoms: _____

If the above criteria for influenza-like illness are met, assess for pandemic flu risk factors:

3. Have you traveled, within ten days prior to your symptoms (listed above)?
   ☐ Yes. Where? _____ Check CDC web site to see if pandemic cases are being reported from this country: http://www.cdc.gov/flu/avian/
   ☐ No
4. Within ten days prior to your symptoms, have you been within three feet of any type of live poultry?
   ☐ Yes
   ☐ No
5. Within ten days prior to your symptoms, have you been within three feet of someone with pneumonia or flu-like symptoms?
   ☐ Yes
   ☐ No

Level of awareness:	☐Alert	Oriented to: ☐person	☐place	☐time	☐Confused	☐Lethargic
History of:	☐seasonal flu vaccine (mo/yr) ___/___			☐pneumococcal vaccine		

Note 1: If ILI clinical criteria is met, individuals should have a surgical/procedure mask placed over their mouth and nose, and then be transported to the identified area of isolation for influenza cases.

Note 2: Given that the symptomatic presentation of pandemic flu cannot be predicted, this form may need to be updated based upon guidance from the BOP Medical Director.

U.S. DEPARTMENT OF JUSTICE FEDERAL BUREAU OF PRISONS

Inmate Name: Louis Pearlman	Register No: 07775-093	Institution: FCC OKLAHOMA CITY
Inmate Received From: ☐ Court ☐ Jail ☐ Self-surrender ☑ Other FCC Coleman		

INMATE: PLEASE COMPLETE ITEMS 1-14.
For non-English speaking, template provided in: ☐ Spanish ☐ Other _____

1. MEDICATIONS: Please list all current medications, doses, and date/time last taken:

(1) Hydrochlorothiazide 25mg	(5) Metformin 500 mg (twice per day)
(2) Glyburide 5mg	(6) Metoprolol Tartrate 50mg (twice per day)
(3) Lisinopril 40mg	(7) Simvastatin 20 mg
(4) Aspirin 81mg	

2. ALLERGIES: Please check any allergies you have had.

☐ Medications: Penecillin	
☐ Foods (list): Pork - NO PORK	☐ Other:

3. MEDICAL ILLNESSES: Please check any conditions you currently have or have had in the past:

☐ Heart Attack/disease	☐ Blood clot	☐ Angina	☐ Diabetes	☐ Sickle cell disease
☐ Lung disease	☐ Asthma	☐ Stroke	☐ High blood pressure	☐ Seizures/Epilepsy
☐ Cancer Type:_____ When:_____		☐ Other _____		

4. INFECTIOUS DISEASE: Please check any conditions you currently have or have had in the past.

☐ Positive TB skin test	☐ Tuberculosis ☐ Cough up blood ☐ Persistent cough- how long?_____		☐ Night sweats
☐ Chickenpox or shingles	☐ Gonorrhea	☐ Chlamydia	☐ Do you currently have a rash, open sore or wound? Where: _____
☐ HIV (how long) _____	☐ Hepatitis (Type):_____	☐ Herpes	☐ Blood transfusion
☐ Recent travel outside US: When: _____ Where: _____	☐ Syphilis ☐ Treated? When: _____ Where: _____		When: _____ Why: _____

Are you at risk for HIV and/or hepatitis due to sharing needles, high-risk sex or tattooing?
☐ Yes ☐ No ☐ Don't know
(If you do not know, please discuss any concerns with a health care provider and request testing if appropriate)

5. NERVOUS CONDITIONS: Please check any conditions you currently have or have had in the past.

Have you ever had a mental illness? ☑ No ☐ Yes Specify:		
☐ Suicidal thoughts When: _____	☐ Head injury When: _____ How: _____	☐ Loss of Consciousness When: _____ How: _____
☐ Suicide Attempt When: _____	How: _____	

6. DRUGS AND ALCOHOL: Are you now using, or have you in the past used any of the following:

SUBSTANCE	HOW USED (Needle, Smoked, Snorted, Pills)	DATE OF LAST USE
☐ Tranquilizers (Valium, Xanax, etc)		
☐ Opiates (Heroin, Methadone, Oxycontin, Vicodin, other)		
☐ Barbiturates (phenobarbital, Seconal, other)		
☐ LSD/Hallucinogens/PCP		
☐ Marijuana		
☐ Other		

BOP FOIA 2016-07384

Type used: (beer, wine, vodka, etc.)	How often: (daily, weekly)	Usual Amount	Date of last drink

Have you ever had, or are you now having, any withdrawal symptoms when you have stopped using drugs or alcohol:
☒ No ☐ Yes
If yes, please describe: _____

Do you use:

Tobacco: ☐ Yes ☑ No How much? _____ Pack/Day How long? _____ Years

7. PAIN ASSESSMENT: ① Lower level Bottom Bunk ② No prolonged standing over 20 minutes

Do you currently suffer from any painful condition? ☐ No ☒ Yes - Location: Back ache - Kidney

8. DENTAL: Do you currently have any of the following:

☐ Pain in teeth or mouth	☐ Swelling in mouth, jaws, or neck	☐ Dental emergency which you feel must be addressed immediately

9. HISTORY OF ABUSE: Please complete the following: if applicable: ☑ Not applicable

TYPE OF ABUSE	WHAT AGE(s) OR WHEN
☐ Physical	
☐ Emotional	
☐ Sexual	

10. FEMALE HEALTH: Women please complete the following:

Date of last menstrual period: _____ # of Pregnancies: _____ Are you pregnant now?: ☐ Yes ☐ No ☐ Don't know

Date of last pap smear: _____
Results: ☐ Normal ☐ Abnormal ☐ Don't know

Date of last mammogram: _____
Results: ☐ Normal ☐ Abnormal ☐ Don't know

Type of Birth Control:
☐ Birth Control Pills ☐ IUD ☐ Diaphragm ☐ None ☐ Other: _____

Are you taking hormones for menopause or after hysterectomy? ☐ Yes ☐ No

Check vaccinations you have had:
☑ Measles ☐ Mumps ☐ Rubella

Have you ever had any of the following? (If yes, what year?)
☐ Abnormal Pap _____
☐ Breast Biopsy _____
☐ Hysterectomy _____

11. ALL INMATES - Please describe any other medical or mental health concerns you have:

12. DIET:

☐ Diabetic	☐ Low salt	☐ Low fat	☐ Vegetarian	☑ Other NO PORK
Current weight: 245		Usual weight: 240		

13. IMMUNIZATIONS: Have you received any of the following vaccinations:

☐ Tetanus (when): _____	☐ Hepatitis A	☐ Hepatitis B	☐ Pneumonia ["Pneumovax"] (when): _____

I have answered all questions truthfully and to the best of my ability.

Version 2.4.0

Attachment 1.3. Influenza-Like-Illness (ILI) Screening Form

This form should be used to when screening large groups for pandemic influenza, e.g., at intake or at triage/sick-call. Everyone's temperature should be taken, and an ILI Screening Form should be filled out for those with a temperature *greater than* 100.4°F (38°C).

Name ~~X~~ _____ # ~~X~~ 02775093

Clinical Criteria for Influenza-Like Illness = In the context of circulating influenza in the community, a temperature greater than 100.4° F (38°C) *and* at least one of the following: cough, or sore throat, or shortness of breath. PEARMAN LOU / 2

1. **Temperature:** 98.6
   ☐ Fever greater than 100.4° F (38°C) Date onset of fever: _____

AND

2. **At least one of these symptoms:**
   ☐ Cough
   ☐ Sore Throat
   ☐ Shortness of breath; if present check respiratory rate: _____
   ☑ None of the above

   ☐Other signs and symptoms: _____

If the above criteria for influenza-like illness are met, assess for pandemic flu risk factors:

3. Have you traveled, within ten days prior to your symptoms (listed above)?
   ☐ Yes. Where? _____ Check CDC web site to see if pandemic cases are being reported from this country: http://www.cdc.gov/flu/avian/
   ☐ No
4. Within ten days prior to your symptoms, have you been within three feet of any type of live poultry?
   ☐ Yes
   ☐ No
5. Within ten days prior to your symptoms, have you been within three feet of someone with pneumonia or flu-like symptoms?
   ☐ Yes
   ☐ No

Level of awareness:	☐Alert Oriented to: ☐person ☐place ☐time ☐Confused ☐Lethargic
History of:	☐seasonal flu vaccine (mo/yr) ___/___ ☐pneumococcal vaccine

Note 1: If ILI clinical criteria is met, individuals should have a surgical/procedure mask placed over their mouth and nose, and then be transported to the identified area of isolation for influenza cases.

Note 2: Given that the symptomatic presentation of pandemic flu cannot be predicted, this form may need to be updated based upon guidance from the BOP Medical Director.

BOP FOIA 2016-07384

Attachment 1.3. 2009 H1N1 Screening Form *(Clinical Use)* (revised May 7, 2009)

This form should be used for screening large groups of inmates for 2009 H1N1 Influenza A, e.g., at intake or at triage/sick-call. Each person should have a temperature taken and be screened for the symptoms below.

Inmate Name: Pearlman, Louis **Number:** 02775-093

Clinical criteria for *acute febrile respiratory illness*: = Temperature greater than 100° F (37.8°C) *and* at least one of the following: rhinorrhea or nasal congestion, cough, sore throat.

1. **Temperature:** N/A
   ☐ Fever greater than 100° F (37.8°C) Date onset of fever:_____

AND

2. **At least one of these symptoms:**
   ☐ cough
   ☐ sore throat
   ☐ rhinorrhea (runny nose) or nasal congestion

Inmates who meet the above criteria for *acute febrile respiratory illness* should be placed in isolation. Individuals should have a surgical/procedure mask placed over their mouth and nose, and then be transported to the identified area for isolation for influenza cases.

*** Emergency warning signs that require urgent medical attention include:**

- ☐ Difficulty breathing or shortness of breath
- ☐ Pain or pressure in the chest or abdomen
- ☐ Sudden dizziness
- ☐ Confusion
- ☐ Severe or persistent vomiting

N/A

Note: This form may need to be updated based upon updated guidance on the Centers for Disease Control Case Definition for H1N1 virus. This guidance was based on CDC [homepage on the internet]. Interim guidance on case definitions to be used for investigations of swine-origin influenza A (H1N1) Cases (May6, 2009). Available from: http://www.cdc.gov/h1n1flu/casedef.htm

Attachment 1.3. 2009 H1N1 Screening Form *(Clinical Use)* **(revised May 7, 2009)**

This form should be used for screening large groups of inmates for 2009 H1N1 Influenza A, e.g., at intake or at triage/sick-call. Each person should have a temperature taken and be screened for the symptoms below.

Inmate Name: Pearlman, Louis **Number:** 02775-093

Clinical criteria for *acute febrile respiratory illness*: = Temperature greater than 100° F (37.8°C) *and* at least one of the following: rhinorrhea or nasal congestion, cough, sore throat.

1. **Temperature:** 98.2°
   ☐ Fever greater than 100° F (37.8°C) Date onset of fever:_____

   AND

2. **At least one of these symptoms:** none
   - ☐ cough
   - ☐ sore throat
   - ☐ rhinorrhea (runny nose) or nasal congestion

Inmates who meet the above criteria for *acute febrile respiratory illness* should be placed in isolation. Individuals should have a surgical/procedure mask placed over their mouth and nose, and then be transported to the identified area for isolation for influenza cases.

*** Emergency warning signs that require urgent medical attention include:** none

- ☐ Difficulty breathing or shortness of breath
- ☐ Pain or pressure in the chest or abdomen
- ☐ Sudden dizziness

BP-S489.061 **HIV COUNSELING DOCUMENTATION** CDFRM
SEP 03
U.S. DEPARTMENT OF JUSTICE **FEDERAL BUREAU OF PRISONS**

Directions:

Use the following criteria to counsel the patient who is tested for the HIV antibody. Check off each item as they are discussed. Write NA beside any item that is inappropriate to the situation. The reverse side of this form will be utilized to document seronegative and inconclusive test results. **File in the patient's record, documenting in progress notes that counseling was completed.**

Explained in: (circle) English Spanish Other_____ (specific language)

PRE-TEST:

____ 1. Explain purpose of session.

____ 2. Explain confidentiality.

____ 3. Explain HIV antibody test.

- ____ a. What AIDS is
- ____ b. What the test is
- ____ c. Test Procedure
- ____ d. Meaning of test results
- ____ e. Inability of detecting early infection (false negatives)
- ____ f. Potential need for additional testing
- ____ g. Significance of a positive test.

____ 4. List risk factors/clinical signs: (check all that apply)

- ____ a. Injecting drug use, sharing drug or tattoo equipment
- ____ b. Unprotected or multiplex sex partners
- ____ c. Treated for: sexually transmitted infections, hepatitis, or TB
- ____ d. Clinical s/s: fever or illness of unknown cause, symptoms of AIDS opportunistic infections.
- ____ e. Exposure: recent occupational or non-occupational exposure/incident.
- ____ f. Pregnant female
- ____ g. Other:

____ 5. Obtain informed consent (when applicable)

____ 6. Risk Reduction Behaviors: Educational material given.

____ 7. Patient Reactions/Comments.

____ 8. Explain how the patient will be notified of the results.

The above information has explained to me in a language I can understand.

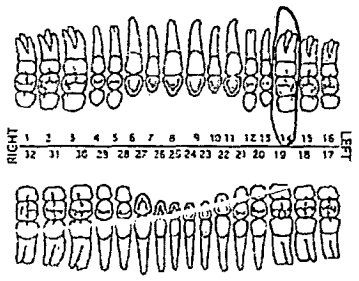
CONSENT FORM FOR ORAL SURGICAL PROCEDURES

Explained in: (circle) (English) Spanish Other_____(specific language)

You have a right to be informed about your diagnosis, the planned surgery, and the possible risks involved so that you may make an informed decision as to consenting to undergo the procedure(s) described below. You have a responsibility to follow the dentist's instruction as to post-operative care and to take any medication, if any, as prescribed. You have the responsibility to notify the dentist if you are experiencing any post-operative pain or complications you consider extraordinary.

Procedure: Extraction #14



TIME OUT TAKEN TO VERIFY WHICH TOOTH(TEETH) IS(ARE) TO BE EXTRACTED. Patient asked a second time to indicate which is(are) the tooth(teeth) causing discomfort.

X _____ _____
Patient Dentist

Alternatives to surgery:

I understand that if this procedure is not performed my condition may worsen resulting in complications including but not limited to:

BP 164/77 P 80

1. Infection
2. Pain
3. Health complications beyond the present problem.

Possible complications which have been explained to me:

1. Pain or soreness
2. Dry socket (alveolitis) (pain occurring for a few days after the extraction)
3. Infection
4. Decision to leave a small piece of tooth root in the jaw when its removal would require extensive surgery and increased risk of complications.
5. Bleeding and bruising, which may be prolonged, as a result of the surgical procedure or the injection of local anaesthetics
6. Swelling
7. Injury to adjacent teeth or restorations
8. Maxillary sinus involvement: due to the proximity of upper posterior teeth's roots to the sinus; root tip or fragment may go into the sinus or a small opening (fistula) may occur
9. Nerve injury: Paresthesia, or residual numbness, which may be of undeterminable duration or even permanent as a result of trauma to a nerve during extraction of teeth or injection of local anaesthetics
10. Bone/jaw fractures may rarely occur, particularly with lower third molars
11. Temporomandibular joint disorder (jaw problems) or restricted opening of the mouth
12. Adverse drug reactions or allergies
13. Sharp ridges or bone splinters which may require additional surgery to smoothen the area

Rare complications may include nerve or blood vessel injury, allergic or unexpected drug reactions, pneumonia, heart attack, stroke and/or death.

I have had the opportunity to discuss and to ask questions about my surgery. Applicable alternative treatment approaches have been explained to me. I am aware of the potential risks and complications associated with the surgery. I understand that the B.O.P. is not obligated to replace any teeth extracted during this procedure.

I Louis Pearlman, Register Number 02775-093, consent to the surgery as described above.

The above information has been explained to me in a language I can understand.

I CERTIFY THAT I HAVE READ AND FULLY UNDERSTOOD THIS DOCUMENT

I VOLUNTARILY GIVE THIS CONSENT AND RECOGNIZE THAT I CAN WITHDRAW IT AT ANY TIME PRIOR TO THE DENTIST BEGINNING. IF THE DENTIST IS IN THE MIDST OF THE PROCEDURE, STOPPING MAY NOT BE POSSIBLE WITHOUT LEADING TO COMPLICATIONS DETRIMENTAL TO MY ORAL HEALTH.

Allergies:

Allergy	Reaction	Date Noted
Penicillins	Nausea	08/04/2008

Active Prescriptions

Albuterol Inhaler HFA (6.7 GM) 90mcg
Inhale 2 puffs by mouth four times daily
Rx#: 36259-TEX **Doctor:** Kahl, Andrew MD
Start: 01/15/10 **Exp:** 02/14/10 **Pharmacy Dispensings:** 6.7 GM in 2435 days

Aspirin 81 MG EC Tab
Take one tablet by mouth each day
Rx#: 34764-TEX **Doctor:** Trejo, Sergio MLP
Start: 12/16/09 **Exp:** 06/14/10 **D/C:** 01/15/10 **Pharmacy Dispensings:** 60 TAB in 2465 days

Aspirin 81 MG EC Tab
Take one tablet by mouth each day
Rx#: 36251-TEX **Doctor:** Kahl, Andrew MD
Start: 01/15/10 **Exp:** 07/14/10 **D/C:** 07/06/10 **Pharmacy Dispensings:** 158 TAB in 2435 days

Clotrimazole Cream 1% 30 GM
Apply sparingly to the affected areas twice daily -- feet
Rx#: 36260-TEX **Doctor:** Kahl, Andrew MD
Start: 01/15/10 **Exp:** 02/14/10 **Pharmacy Dispensings:** 30 GM in 2435 days

glyBURIDE 5 MG Tab
Take one tablet by mouth each morning
Rx#: 34765-TEX **Doctor:** Trejo, Sergio MLP
Start: 12/16/09 **Exp:** 06/14/10 **D/C:** 01/15/10 **Pharmacy Dispensings:** 60 TAB in 2465 days

glyBURIDE 5 MG Tab
Take one tablet by mouth each morning
Rx#: 36252-TEX **Doctor:** Kahl, Andrew MD
Start: 01/15/10 **Exp:** 07/14/10 **D/C:** 07/06/10 **Pharmacy Dispensings:** 158 TAB in 2435 days

BOP FOIA 2016-07384

Active Prescriptions

Hydrochlorothiazide 25 MG Tab
Take one tablet by mouth each morning
Rx#: 34766-TEX **Doctor:** Trejo, Sergio MLP
Start: 12/16/09 **Exp:** 06/14/10 **D/C:** 01/15/10 **Pharmacy Dispensings:** 60 TAB in 2465 days

Hydrochlorothiazide 25 MG Tab
Take one tablet by mouth each morning
Rx#: 36253-TEX **Doctor:** Kahl, Andrew MD
Start: 01/15/10 **Exp:** 07/14/10 **D/C:** 07/06/10 **Pharmacy Dispensings:** 158 TAB in 2435 days

Hydrocortisone Cream 2.5%, 20 GM
Apply sparingly to the affected areas twice daily
Rx#: 36261-TEX **Doctor:** Kahl, Andrew MD
Start: 01/15/10 **Exp:** 02/14/10 **Pharmacy Dispensings:** 20 GM in 2435 days

Ibuprofen 600 MG Tab
Take one tablet by mouth four times daily for 2 days
Rx#: 36365-TEX **Doctor:** Whitehead, Robert DDS
Start: 01/19/10 **Exp:** 01/21/10 **Pharmacy Dispensings:** 8 TAB in 2431 days

Ibuprofen 600 MG Tab
Take one tablet by mouth three times daily for 10 days as needed with food
Rx#: 43545-TEX **Doctor:** Gulley, JoAnn NP
Start: 05/25/10 **Exp:** 06/04/10 **Pharmacy Dispensings:** 30 TAB in 2305 days

Lisinopril 40 MG Tab
Take one tablet by mouth each day
Rx#: 34767-TEX **Doctor:** Trejo, Sergio MLP
Start: 12/16/09 **Exp:** 06/14/10 **D/C:** 01/15/10 **Pharmacy Dispensings:** 60 TAB in 2465 days

Lisinopril 40 MG Tab
Take one tablet by mouth each day
Rx#: 36254-TEX **Doctor:** Kahl, Andrew MD
Start: 01/15/10 **Exp:** 07/14/10 **D/C:** 07/06/10 **Pharmacy Dispensings:** 158 TAB in 2435 days

metFORMIN 500 MG Tab
Take one tablet by mouth twice daily
Rx#: 34768-TEX **Doctor:** Trejo, Sergio MLP
Start: 12/16/09 **Exp:** 06/14/10 **D/C:** 01/15/10 **Pharmacy Dispensings:** 120 TAB in 2465 days

Active Prescriptions

metFORMIN 500 MG Tab
Take one tablet by mouth twice daily
Rx#: 36255-TEX **Doctor:** Kahl, Andrew MD
Start: 01/15/10 **Exp:** 07/14/10 **D/C:** 07/06/10 **Pharmacy Dispensings:** 360 TAB in 2435 days

Metoprolol Tartrate 50 MG Tab
Take one tablet by mouth twice daily
Rx#: 34769-TEX **Doctor:** Trejo, Sergio MLP
Start: 12/16/09 **Exp:** 06/14/10 **D/C:** 01/15/10 **Pharmacy Dispensings:** 120 TAB in 2465 days

BP-S489.061 **HIV COUNSELING DOCUMENTATION** CDFRM
SEP 03
U.S. DEPARTMENT OF JUSTICE **FEDERAL BUREAU OF PRISONS**

Directions:

Use the following criteria to counsel the patient who is tested for the HIV antibody. Check off each item as they are discussed. Write NA beside any item that is inappropriate to the situation. The reverse side of this form will be utilized to document seronegative and inconclusive test results. **File in the patient's record, documenting in progress notes that counseling was completed.**

Explained in: (circle) English Spanish Other_____ (specific language)

PRE-TEST:

____ 1. Explain purpose of session.

____ 2. Explain confidentiality.

____ 3. Explain HIV antibody test.

- ____ a. What AIDS is
- ____ b. What the test is
- ____ c. Test Procedure
- ____ d. Meaning of test results
- ____ e. Inability of detecting early infection (false negatives)
- ____ f. Potential need for additional testing
- ____ g. Significance of a positive test.

____ 4. List risk factors/clinical signs: (check all that apply)

- ____ a. Injecting drug use, sharing drug or tattoo equipment
- ____ b. Unprotected or multiplex sex partners
- ____ c. Treated for: sexually transmitted infections, hepatitis, or TB
- ____ d. Clinical s/s: fever or illness of unknown cause, symptoms of AIDS opportunistic infections.
- ____ e. Exposure: recent occupational or non-occupational exposure/incident.
- ____ f. Pregnant female
- ____ g. Other:

____ 5. Obtain informed consent (when applicable)

____ 6. Risk Reduction Behaviors: Educational material given.

____ 7. Patient Reactions/Comments.

____ 8. Explain how the patient will be notified of the results.

The above information has explained to me in a language I can understand.

BOP FOIA 2016-07384

HIV Post Counseling Documentation

Seronegative

____ 1. Explain purpose of session.

____ 2. Review confidentiality.

____ 3. Test Information

- ____ a. Inform patient of negative test result.
- ____ b. Explain purpose of test.
- ____ c. Identify remaining risks.
- ____ d. Explain inability of test to detect early infections.(false negatives)

____ 4. Explain risk reduction behaviors (high risk)

____ 5. Discuss follow-up testing (high risk)

____ 6. Give additional education material if requested.

____ 7. Patients Reactions/Level of Understanding/Comments

The above information has been explained to me in a language I can understand.

Signature of Inmate X	Signature of Staff Counselor

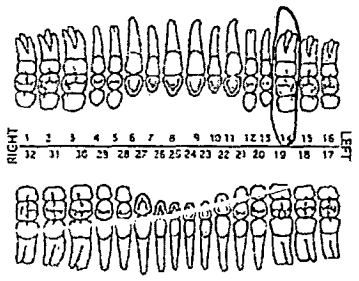
CONSENT FORM FOR ORAL SURGICAL PROCEDURES

Explained in: (circle) (English) Spanish Other_____(specific language)

You have a right to be informed about your diagnosis, the planned surgery, and the possible risks involved so that you may make an informed decision as to consenting to undergo the procedure(s) described below. You have a responsibility to follow the dentist's instruction as to post-operative care and to take any medication, if any, as prescribed. You have the responsibility to notify the dentist if you are experiencing any post-operative pain or complications you consider extraordinary.

Procedure: Extraction #14



TIME OUT TAKEN TO VERIFY WHICH TOOTH(TEETH) IS(ARE) TO BE EXTRACTED. Patient asked a second time to indicate which is(are) the tooth(teeth) causing discomfort.

X _____ _____
Patient Dentist

Alternatives to surgery:

I understand that if this procedure is not performed my condition may worsen resulting in complications including but not limited to:

BP 164/77 P 80

1. Infection
2. Pain
3. Health complications beyond the present problem.

Possible complications which have been explained to me:

1. Pain or soreness
2. Dry socket (alveolitis) (pain occurring for a few days after the extraction)
3. Infection
4. Decision to leave a small piece of tooth root in the jaw when its removal would require extensive surgery and increased risk of complications.
5. Bleeding and bruising, which may be prolonged, as a result of the surgical procedure or the injection of local anaesthetics
6. Swelling
7. Injury to adjacent teeth or restorations
8. Maxillary sinus involvement: due to the proximity of upper posterior teeth's roots to the sinus; root tip or fragment may go into the sinus or a small opening (fistula) may occur
9. Nerve injury: Paresthesia, or residual numbness, which may be of undeterminable duration or even permanent as a result of trauma to a nerve during extraction of teeth or injection of local anaesthetics
10. Bone/jaw fractures may rarely occur, particularly with lower third molars
11. Temporomandibular joint disorder (jaw problems) or restricted opening of the mouth
12. Adverse drug reactions or allergies
13. Sharp ridges or bone splinters which may require additional surgery to smoothen the area

Rare complications may include nerve or blood vessel injury, allergic or unexpected drug reactions, pneumonia, heart attack, stroke and/or death.

I have had the opportunity to discuss and to ask questions about my surgery. Applicable alternative treatment approaches have been explained to me. I am aware of the potential risks and complications associated with the surgery. I understand that the B.O.P. is not obligated to replace any teeth extracted during this procedure.

I Louis Pearlman, Register Number 02775-093, consent to the surgery as described above.

The above information has been explained to me in a language I can understand.

I CERTIFY THAT I HAVE READ AND FULLY UNDERSTOOD THIS DOCUMENT

I VOLUNTARILY GIVE THIS CONSENT AND RECOGNIZE THAT I CAN WITHDRAW IT AT ANY TIME PRIOR TO THE DENTIST BEGINNING. IF THE DENTIST IS IN THE MIDST OF THE PROCEDURE, STOPPING MAY NOT BE POSSIBLE WITHOUT LEADING TO COMPLICATIONS DETRIMENTAL TO MY ORAL HEALTH.

BP-A0807 **INFORMATION ON VACCINATION (CONSENT, DECLINATION) CDFRM**
SEP 10 **FOR INFLUENZA VACCINE - INMATES**

U.S. DEPARTMENT OF JUSTICE **FEDERAL BUREAU OF PRISONS**

Influenza Vaccine (Flu Shot) ***NOTE: Consult the Centers for Disease Control for Annual Updates***

Why get vaccinated?

Influenza ("flu") is a contagious disease. It is caused by the influenza virus, which can be spread by coughing, sneezing, or nasal secretions. Anyone can get influenza. For most people, symptoms last only a few days. They include: fever, sore throat, chills, fatigue, cough, headache, and muscle aches. Other illnesses can have the same symptoms and are often mistaken for influenza.

Infants, the elderly, pregnant women, and people with certain health conditions-- such as heart, lung or kidney disease or a weakened immune system--can get much sicker. Flu can cause high fever and pneumonia, and make existing medical conditions worse. Each year thousands of people die from seasonal influenza and even more require hospitalization.

By getting vaccinated you can protect yourself from influenza and may also avoid spreading influenza to others. Influenza viruses are always changing, so annual vaccination is recommended. Each year scientists try to match the viruses in the vaccine to those most likely to cause flu that year. The 2010-2011 vaccine provides protection against A/H1N1 (pandemic) influenza and two other influenza viruses – influenza A/H3N2 and influenza B. It will not prevent illness caused by other viruses.

Who should get inactivated influenza vaccine and when?

WHO: All people 6 months of age and older should get flu vaccine. Vaccination is especially important for people at higher risk of severe influenza and their close contacts, including healthcare personnel and close contacts of children younger than 6 months. People who got the 2009 H1N1 (pandemic) influenza vaccine, or had pandemic flu in 2009, should still get the 2010-2011 seasonal influenza vaccine.

Vaccination of pregnant women protects both women and newborns. Therefore influenza vaccination is generally recommended for pregnant women.

WHEN: Getting the vaccine as soon as it is available will provide protection if the flu season comes early. You can get the vaccine as long as illness is occurring in your community. Influenza can occur at any time, but most influenza occurs from November through May. In recent seasons, most infections have occurred in January and February. Getting vaccinated in December, or even later, will still be beneficial in most years. Adults need one dose of influenza vaccine each year. It takes up to 2 weeks for protection to develop after the shot. Protection lasts about a year.

Some people should not get inactivated influenza vaccine or should wait.

Tell your healthcare provider if you have any severe (life-threatening) allergies. Allergic reactions to influenza vaccine are rare. Influenza vaccine virus is grown in eggs. People with a severe egg allergy should not get influenza vaccine. A severe allergy to any vaccine component is also a reason not to get the vaccine. If you ever had a severe reaction after a dose of influenza vaccine, tell your healthcare provider. Also, tell your healthcare provider if you ever had Guillain-Barré Syndrome (a severe paralytic illness). Your provider will help you decide whether the vaccine is recommended for you.

(PRINT) Inmate Name (Last, First)	Register Number	Institution
Louis Pearlman	02775-093	

BOP FOIA 2016-07384

People who are moderately or severely ill should usually wait until they recover before getting flu vaccine. If you are ill, talk to your healthcare provider about whether to reschedule the vaccination. People with a mild illness can usually get the vaccine.

What are the risks from inactivated influenza vaccine?

A vaccine, like any medicine, could possibly cause serious problems, such as severe allergic reactions. The risk of a vaccine causing serious harm, or death, is extremely small. Serious problems from inactivated influenza vaccine are very rare. The viruses in inactivated influenza vaccine have been killed, so you cannot get influenza from the vaccine. Mild problems include: soreness, redness, or swelling where the shot was given; hoarseness; sore, red or itchy eyes; cough; fever; and aches. If these problems occur, they usually begin soon after the shot and last 1-2 days. Life-threatening allergic reactions from vaccines are very rare. If they do occur, it is usually within a few minutes to a few hours after the shot. In 1976, a type of inactivated influenza (swine flu) vaccine was associated with Guillain-Barré Syndrome (GBS). Since then, flu vaccines have not been clearly linked to GBS. However, if there is a risk of GBS from current flu vaccines, it would be no more than 1 or 2 cases per million people vaccinated. This is much lower than the risk of severe influenza, which can be prevented by vaccination. Note: Depending upon the manufacturer, each dose of flu vaccine may contain trace amounts of the preservative thimerosal, a mercury derivative.

What if there is a severe reaction? What should I look for?

Any unusual condition, such as a high fever or behavior changes. Signs of a severe allergic reaction can include difficulty breathing, hoarseness or wheezing, hives, paleness, weakness, a fast heart beat or dizziness. If these symptoms occur go to health services right away. Tell the provider what happened, the date and time it happened, and when the vaccine was given.

If you have any questions about flu vaccination ask a health care provider.

Yes	No	**Health Questions Prior to Vaccination** (Check Yes or No)
	✓	Are you sick today?
	✓	Do you have allergy to eggs or to a component of the vaccine?
	✓	Have you ever had serious reaction to influenza vaccine?
	✓	Have you had Guillain-Barré syndrome (progressive paralysis)?

Consent/Declination for Influenza Vaccine

I have read the BOP information statement about the influenza vaccine and had the opportunity to ask questions about benefits and risks of vaccination.

☐ I **DO** want to receive the influenza vaccine at this time.

☒ I **DO NOT** want to receive the influenza vaccine at this time.

Active Prescriptions

Aspirin 81 MG EC Tab
Take one tablet by mouth each day
Rx#: 54928-TEX **Doctor:** Nash, Clay MD, CD
Start: 12/23/10 **Exp:** 06/21/11 **D/C:** 02/01/11 **Pharmacy Dispensings:** 60 TAB in 2093 days

Aspirin, E.C. 325 MG Tab
Take one tablet by mouth each day with food
Rx#: 57134-TEX **Doctor:** Nash, Clay MD, CD
Start: 02/02/11 **Exp:** 08/01/11 **D/C:** 07/14/11 **Pharmacy Dispensings:** 180 TAB in 2052 days

Flunisolide Nasal (Nasalide) 0.025%, 25ml SOL
Inhale two sprays in each nostril twice daily
Rx#: 54947-TEX **Doctor:** Nash, Clay MD, CD
Start: 12/23/10 **Exp:** 01/22/11 **Pharmacy Dispensings:** 25 ml in 2093 days

glyBURIDE 5 MG Tab
Take one tablet by mouth twice daily
Rx#: 54942-TEX **Doctor:** Nash, Clay MD, CD
Start: 12/23/10 **Exp:** 06/21/11 **D/C:** 02/01/11 **Pharmacy Dispensings:** 120 TAB in 2093 days

glyBURIDE 5 MG Tab
Take one tablet by mouth twice daily
Rx#: 57057-TEX **Doctor:** Nash, Clay MD, CD
Start: 02/01/11 **Exp:** 07/31/11 **D/C:** 04/01/11 **Pharmacy Dispensings:** 120 TAB in 2053 days

glyBURIDE 5 MG Tab
Take one tablet by mouth twice daily -- hold medication for 3 days 04/04/2011 to 04/06/2011
Rx#: 60539-TEX **Doctor:** Nash, Clay MD, CD
Start: 04/06/11 **Exp:** 10/03/11 **D/C:** 07/14/11 **Pharmacy Dispensings:** 240 TAB in 1989 days

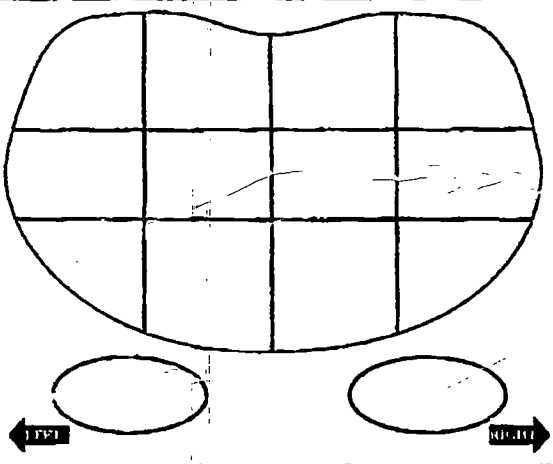
Diagnosis Summary

Prostate gland needle biopsies A, B, C, D, E, F, G, and H: Benign prostatic tissue. No evidence of invasive adenocarcinoma of prostate or high grade PIN identified. Mild focal acute and chronic inflammation present.

Prostate Biopsy Diagram



Photomicrograph

Micro Description

Sections A-H consist of 16 fragments of prostate gland from 8 areas. There is no evidence of invasive adenocarcinoma of prostate or high grade PIN identified in any of the fragments. Mild chronic inflammation and acute inflammation is noted along with occasional gland atrophy.

TEXARKANA CARDIOLOGY ASSOCIATES
CARDIOLITE REPORT

Nuclear Cardiology
Accredited Nuclear Cardiology Laboratory

Patient Name:	**PEARLMAN , LOUIS**	**Study Date:**	**23-Mar-2011**
Patient ID:	**0000**	**Referring Physician:**	**Brent Robinson, MD**
Age/Sex:	**56 yo Male**	**Reporting Physician:**	**Kiran Kurichety, MD**
Height: 70 in	**Weight: 265 lbs**	**BSA: 2.35 m^2**	

INDICATIONS: Stroke, Dyphoresis, Hypertension

MYOCARDIAL PERFUSION SUMMARY

(1) Small to moderate sized mild severity inferoseptal and inferior rest defect consistent with diaphragm artifact in the territory typical of the distal RCA.

Pt was infused with 0.4ml (5mg) IV Lexiscan during GXT when pt was unable to reach max predicted HR at peak exercise level. Stress had a normal blood pressure response. Stress had a Normal ST response.

LV myocardial perfusion was abnormal. Global LV function was normal. LV regional wall motion was normal.

Scan significance was abnormal and indicates an uncertain risk for hard cardiac events. LV dilation was abnormal suggestive of multi-vessel ischemia.

LVEF: 69%

REVIEWED
APR 14 2011
Cardiac Doctor

STRESS PROTOCOL: Lexiscan (Regadenoson)
The patient was given a rapid injection of 0.4 mg/5mo of regadenoson; followed immediately by saline flush and radiopharmaceutical. The patient's heart rate increased from 59 bpm at rest to 113 at peak stress. The patient's blood pressure at rest was 150/80 mmHg and increased to 174/82 mmHg at peak stress. Blood pressure response was normal.

STRESS TEST FINDINGS: Adequacy of Stress:

	STRESS EKG DATA	REST EKG DATA
Test Status	normal	normal
Rhythm	normal sinus rhythm	normal sinus rhythm
AV Block	none	none
IV Conduction	normal	normal
Arrhythmias	none	none
ST Response	Normal	
Repolarization		normal repolarization

IMAGING PROTOCOL: Rest Cardiolite / Gated Stress Cardiolite
Rest imaging was performed approximately 48 minutes following the intravenous injection of 12.1 mCi of Cardiolite at rest. Stress imaging was performed; 34.0 mCi of Cardiolite were injected intravenously 15-20 seconds after the injection of Lexiscan. The heart was imaged beginning approximately 139 minutes post-injection.

RE: Utilization Review Committee Case Review Decision for Prostate Bx

Dear Patient:

☑ Your case was reviewed and approved. Your procedure/evaluation will be scheduled accordingly.

☐ Your case was reviewed and will need a follow up by your primary care provider or staff physician. Re-submission of the request will be considered if medically indicated.

☐ Your case was reviewed and determined the procedure is contraindicated, due to unacceptable risk to you if it is performed. We will continue to monitor and provide treatment as necessary; re-submission of the request will be considered if medically indicated.

☐ Your case was reviewed and determined it will be referred to Medical Designations for request to be transferred to a Federal Medical Center for further care. If that request is denied, re-submission to the committee will be considered.

☐ Your case was reviewed and denied. We will continue to monitor and provide treatment as necessary. The denial is based on the following reason.

- ☐ It is considered an elective procedure that can wait until you are released from Federal custody.
- ☐ The procedure will provide little or no medical value and/or is not likely to provide substantial long-term gain.
- ☐ Due to your imminent release date, there is not enough time to complete appropriate evaluations/studies/treatment, prior to your release.

NOTE: Should you have any questions regarding this notification, submit an Inmate Request to Staff Member (copout) addressed to the Clinical Director.

Exam Date Time: 12/02/101917
Exam:
1202-0008 CT/HEAD/BRAIN WO CONT

Exam CPT: 70450

CT head

History: Facial droop.

Axial 5 mm slices were obtained from the skull base to the vertex. Initial images had considerable motion artifact, and a portion of the exam was repeated. Right basal ganglia has an eight x 25 mm area of encephalomalacia and demyelination anterolaterally. Right caudate head and body have encephalomalacia and mild volume loss. Additional patchy areas of ill-defined demyelination are present adjacent to the mid body of right lateral ventricle and of the anterior and posterior margins of left lateral ventricle. There is no hemorrhage, abnormal mass effect or extra-axial fluid collection. Skull and sinuses visualized are unremarkable.

Impression: CVA involving right basal ganglia and caudate. Additional demyelination and encephalomalacia in the periventricular white matter bilaterally. No definite acute intracranial pathology on this noncontrast exam. If symptoms persist, a repeat exam with IV contrast or MRI may be helpful if clinically indicated.

Exam CPT: 71010

AP chest: There is mild respiratory motion artifact. Cardiac silhouette projects mildly enlarged but is accentuated by AP technique. Upper lobe vessels are not congested. There is no consolidation or effusion. Bones are moderately osteoporotic.

Impression: Mild respiratory motion artifact. Borderline to mild cardiomegaly without congestive failure.

Exam Date Time: 12/03/100700
Exam:
1203-0022 MRI/BRAIN W/WO

Exam CPT: 70553

Brain MRI with and without contrast

TECHNIQUE: Routine MR protocol for the brain with and without contrast was performed and diffusion weighted sequences were included.

FINDINGS: Diffusion weighted sequences demonstrate a roughly wedge-shaped area of increased signal consistent with acute ischemic infarct involving the parietal white matter posteriorly on the right adjacent to the lateral ventricle. Slight increased T2 signal consistent with edema. Evidence of prior microvascular white matter infarcts seen within the deep parietal white matter bilaterally. Linear encephalomalacia present within the basal ganglia on the right. Mild generalized cortical atrophy is present. Areas of demyelination are seen within a periventricular distribution most consistent with gliosis likely secondary to small vessel white matter ischemic disease. No abnormal intra-axial or extra-axial fluid collections are present and no mass or mass-effect is seen. Post-contrast images show no abnormal enhancement. Cervicomedullary junction structures and those of the cerebellopontine angle show normal signal. Normal signal is present within the paranasal sinuses.

IMPRESSION:
1. ACUTE ISCHEMIC INFARCT WITHIN THE RIGHT POSTERIOR PARIETAL WHITE MATTER. NO HEMORRHAGE, MIDLINE SHIFT, OR ABNORMAL ENHANCEMENT DEMONSTRATED.
2. REMOTE RIGHT BASAL GANGLIA LACUNAR INFARCT AND FOCAL MICROVASCULAR WHITE MATTER INFARCTS INVOLVING THE DEEP PARIETAL WHITE MATTER BILATERALLY.
3. ATROPHY AND WHITE MATTER DEGENERATIVE CHANGES.

CHRISTUS ST MICHAEL HEALTH SYSTEM
HISTORY AND PHYSICAL

Pearlman, Louis

Patient: PEARLMAN, LOUIS DOB: 06/19/1954
Unit #: MB00473917 Acct #: AM0706759744
Facility: St. Michael Health Care Center Age/Sex: 56 / M
Attending: JOHN J HARRIS, MD Room:
Admit Date: 12/02/2010

CHIEF COMPLAINT:
Left sided weakness upper and lower extremity.

HISTORY OF PRESENTING ILLNESS:
This is a 56-year-old white male inmate of FCI who presents with a left-sided weakness of his upper and lower extremities since 11:00 today. He said he went to see the nurse for a "cold-like" symptoms, cough productive of greenish sputum, sore throat, rhinorrhea and felt his left arm and leg began to droop. He said he also had some facial droop and slurring of speech. The patient denies any blurry vision, diaphoresis, chest pain, shortness of breath, nausea, vomiting, abdominal pain, diarrhea, constipation and dysuria.

PAST MEDICAL HISTORY:
For diabetes, hypertension, dyslipidemia.

PAST SURGICAL HISTORY:
For a right kidney embolization for right kidney cyst.

ALLERGIES:
To penicillin.

MEDICATIONS:
Aspirin EC 81 milligrams p.o. daily, fluticasone nasal spray, glyburide 5 milligrams p.o. q.a.c., HCTZ 25 milligrams p.o. q.a.c., lisinopril 40 milligrams p.o. daily, metformin 500 milligrams p.o. b.i.d., metoprolol 50 milligrams p.o. b.i.d. petrolatum gel 28.4 grams b.i.d. and simvastatin 20 milligrams p.o. nightly.

SOCIAL HISTORY:
Denies tobacco, alcohol and illicit.

FAMILY HISTORY:
Father MI at 73.

REVIEW OF SYSTEM:
Weight loss. The patient is trying.

PHYSICAL EXAM:
VITAL SIGNS: Temperature 97.3, heart rate 71, respirations 22, blood pressure 249/114, 98% on 2 liters nasal cannula.
GENERAL: This an obese male lying in bed in no acute distress.
HEENT: Normocephalic, atraumatic. Pupils equal, round, reactive to light and accommodation. Extraocular muscles intact. Nostrils no discharge. Throat clear and no exudates.
NECK: Thick, supple. No palpable lymph nodes. Thyroid no masses.
Left sided facial droop mild.
CVS: S1-S2 regular rate and rhythm. No murmur, rub or gallop.
RESPIRATORY: Lungs clear to auscultation bilaterally.

BOP FOIA 2016-07384

ABDOMEN: Bowel sounds positive, soft, nontender, obese.
EXTREMITIES: No clubbing, cyanosis or edema. Positive pedal pulse bilaterally.
NEURO: Alert and oriented x3. Cranial nerves II-XII grossly intact. Minus the right facial droop, 4/5 strength in left upper and left lower extremity, 5/5 strength the right upper and right lower extremity. Sensation grossly intact.

LABS:
White blood cell count 8.6, hemoglobin 14.6, hematocrit 41.8, platelets 273. Sodium 134, potassium 3.4, chloride 97, bicarb 29, BUN 14, creatinine 0.91, blood sugar 352, calcium 8.9, total bili 1.0, AST 24, ALT 29, alk phos 99, CK-MB 2.3, troponin 0.00, albumin 4.0, PT 10.8, INR 0.9, PTT 26.6. EKG showed normal sinus rhythm. Guaiac was negative. Head CT shows old CVAs involving the right basal ganglia and caudate. Additional demyelination and encephalomalacia in the periventricular white matter bilaterally. No definite acute pathology.

ASSESSMENT/PLAN:
1. Stroke versus transient ischemic attack. We will admit to telemetry. We will continue aspirin, get neuro checks, dysphagia screen, fasting lipid profile in the morning. We will also get an MRI with and without contrast in the morning as well carotid Dopplers.
2. Diabetes mellitus. Accu-Cheks q.a.c. and nightly. Medium dose sliding scale insulin. Will hold metformin for now. Hemoglobin A1c.
3. Hypertensive urgency. The patient is on IV Cardene now. We will continue and titrate to a systolic blood pressure of 160. Will start back on home HP meds.
4. Dyslipidemia. Will check fasting lipid profile in the morning. Will continue simvastatin.
5. Hypokalemia. Will replete.
6. Deep venous thrombosis prophylaxis. Lovenox 40 milligrams subcu daily.

Dear Dr. Nash,

Mr. Pearlman underwent a Colonoscopy-EGD on 12/15/2011.

INDICATIONS:
- Gastrointestinal hemorrhage

FINDINGS ON THE COLONOSCOPY:

Protruding Lesions: A single sessile 3 mm polyp of benign appearance was found in the splenic flexure. Cold forceps biopsies were performed for histology. Medium internal hemorrhoids were noted.

Excavated Lesions: Multiple diverticula were seen in the descending colon and sigmoid colon.

FINDINGS ON THE UPPER ENDOSCOPY:

Esophagus:

Mucosa: Grade 1 esophagitis was seen.

Stomach:

Lumen: A small size hiatal hernia was seen.

Mucosa: Patchy erosion of the mucosa was noted in the stomach body and antrum. These findings are compatible with erosive gastritis. Cold forceps biopsies were performed for histology.

Duodenum: Normal duodenum

C. OGDEN, RN CI - TEXARKANA, TX

There were no complications.

12/21/11

IMPRESSIONS:
- Small hiatal hernia
- Erosion in the stomach body and antrum compatible with erosive gastritis (biopsy)
- Grade 1 esophagitis

On Omeprazole

Diet ha[illegible] dog

BOP FOIA 2016-07384

- Internal hemorrhoids
- Diverticulosis of the descending colon and sigmoid colon
- Polyp in the splenic flexure (biopsy)
- Otherwise normal colonoscopy-egd to second part of the duodenum and cecum

RECOMMENDATIONS:

- Follow-up pathology results
- Protonix 40 mg (SIG: 1 po q day, Qty: 30, Refills: 11)

Thank you very much for allowing me to participate in the care of Mr. Pearlman.

Sincerely,

John C. Cozart, MD

RE: Utilization Review Committee Case Review Decision for EGD/colonoscopy

Dear Patient:

☑ Your case was reviewed and approved. Your procedure/evaluation will be scheduled accordingly.

☐ Your case was reviewed and will need a follow up by your primary care provider or staff physician. Re-submission of the request will be considered if medically indicated.

☐ Your case was reviewed and determined the procedure is contraindicated, due to unacceptable risk to you if it is performed. We will continue to monitor and provide treatment as necessary; re-submission of the request will be considered if medically indicated.

☐ Your case was reviewed and determined it will be referred to Medical Designations for request to be transferred to a Federal Medical Center for further care. If that request is denied, re-submission to the committee will be considered.

☐ Your case was reviewed and denied. We will continue to monitor and provide treatment as necessary. The denial is based on the following reason.

- ☐ It is considered an elective procedure that can wait until you are released from Federal custody.
- ☐ The procedure will provide little or no medical value and/or is not likely to provide substantial long-term gain.
- ☐ Due to your imminent release date, there is not enough time to complete appropriate evaluations/studies/treatment, prior to your release.

NOTE: Should you have any questions regarding this notification, submit an Inmate Request to Staff Member (copout) addressed to the Clinical Director.

MEDICAL RECORD	REQUEST FOR ADMINISTRATION OF ANESTHESIA AND FOR PERFORMANCE OF OPERATIONS AND OTHER PROCEDURES

A. IDENTIFICATION

OPERATION OR PROCEDURE

Therapeutic/Diagnostic Injection

B. STATEMENT OF REQUEST

1. The nature and purpose of the operation or procedure, potential benefits and drawbacks, potential problems related to recuperation, likelihood of success, possible results of non-treatment, and any significant alternatives have been fully explained to me. I have also been informed that there are other risks, which include but are not limited to severe loss of blood, infection, and cardiac arrest, that are attendant to the performance of any surgical procedure. I acknowledge that no guarantees have been made to me concerning the results of the operation or procedure. I understand the nature of the operation or procedure to be: (Description of operation or procedure in layman's language)

Injection techniques are helpful for diagnosis and therapy in a wide variety of conditions. The injections may be used to determine the cause of the condition (diagnostic), to treat the condition (therapeutic), or both diagnostic and therapeutic. Often, a diagnosis can be made from analysis of tissue, cells, or fluid. In addition, the assessment of pain relief and increased range of motion can be used as a diagnostic tool. Therapeutic indications include the delivery of local anesthetics for pain relief and the delivery of corticosteroids for suppression of inflammation.

which is to be performed by or under the direction of Garry Allen

On 04/17/2012 (date)

2. I request the performance of the above - named operation or procedure and of such additional operations or procedures as are found to be necessary or desirable, in the judgment of the professional staff of the below - named medical facility, during the course of the above - named operation or procedure.
3. I request the administration of such anesthesia as may be considered necessary or advisable in the judgment of the professional staff of the below named facility.
4. Exceptions to surgery or anesthesia, if any, are:
5. I request the disposal by authorities of the below - named medical facility of any tissues or parts which it may be necessary to remove.
6. I understand that photographs and movies may be taken of this operation , and that they may be viewed by various personnel undergoing training or indoctrination at this or other facilities. I consent to the taking of such pictures and observation of the operation by authorized personnel, subject to the following conditions.
   a. The name of the patient and his/her family is not used to identify said pictures.
   b. Said pictures be used only for purposes of medical/dental study or research.

C. SIGNATURES (Appropriate items in Parts A and B must be completed before signing)

1. COUNSELING PRACTITIONER: I have counseled this patient as to the nature of the proposed procedure(s), attendant risks involved, and expected results, as described above.

G. Allen, RN, NP-C
FCI - Texarkana (Signature of Counseling Practitioner) G Allen, RN, NP-C 4/17/2012 1250

2. PATIENT: I understand the nature of the proposed procedure(s), attendant risks involved, and expected results, as described above, and hereby request such procedure(s) be performed.

(x) These estimates vary with age, ethnicity, family and DRE results.
(*) The diagnostic usefulness of % Free PSA has not been established in patients with total PSA below 2.6 ng/mL
(+) In men with PSA above 10 ng/mL, prostate cancer risk is determined by total PSA alone.

PSA was performed using the Beckman Coulter Immunoassay method. Values obtained from different assay methods cannot be used interchangeably. PSA levels, regardless of value, should not be interpreted as absolute evidence of the presence or absence of disease.

Note Date:	01/29/2013 20:12	Provider:	Dusseau, Charles RN	Unit:	Z01

Patient Education Encounter encounter performed at Special Housing Unit.

Administrative Notes:

ADMINISTRATIVE NOTE 1 **Provider:** Dusseau, Charles RN

Patient placed in SHU to be NPO pending procedure tomorrow. Advised by custody staff that patient appeared to have excess medications in his locker. All medications were collected and the following excess over a 30 days supply were noted.

#54 Aspirin 325mg
#52 Simvastatin 20mg
#19 HCTZ
#35 Metoprolol
#41 Metformin
#8 lisinopril
#11 amlodipine
#152 glyburide 5mg
#186 Dipyridamole 25 MG

Discussed this with patient and he states that he takes his medicine as prescribed. Advised patient on importance of taking medication as prescribed. Advised patient that a 30 day supply of all his medicines will be available for pick up in pharmacy when he returns from his scheduled procedure tomorrow.

Schedule:

Activity	Date Scheduled	Scheduled Provider
Counseling	01/31/2013 00:00	Nurse 01

Patient found with excess medication in his locker. See note 1/29/13. Of particular importance approx
2 months supply of asa, and simvastatin found
5 months supply of glyburide found.
See if he is taking these meds especially glyburide. Reinforce compliance.

BOP FOIA 2016-07384

323466

NORTHEAST TEXAS SURGICAL CENTER
OPERATIVE REPORT

PATIENT NAME: PEARLMAN, LOUIS **DATE OF OPERATION:** 01/30/13
HOSPITAL NUMBER: 3466
DATE OF BIRTH: 06/19/1954
SURGEON: CHRISTOPHER PAYNE, M.D.

PREOPERATIVE DIAGNOSIS: Elevated prostate-specific antigen.

POSTOPERATIVE DIAGNOSIS: Elevated prostate-specific antigen.

OPERATION PERFORMED: Transrectal ultrasound of the prostate with ultrasound guidance for prostate needle biopsy.

ANESTHESIA: IV sedation.

ESTIMATED BLOOD LOSS: None.

COMPLICATIONS: None.

FINDINGS: Prostate measurement 4.31 x 4.92 x 5.19 cm. Calculated volume was 57.6 mL. Two biopsy cores taken each from the right and left lateral, mid, base, and apex of the prostate, total of 16 biopsy cores were taken.

INDICATIONS: The patient is a 58-year-old white male with elevated PSA. He presents now for prostate needle biopsy with sedation. The risks and benefits of this procedure were explained to the patient included but not limited to pain, bleeding, infection and possibility for acute prostatitis requiring hospital admission. The patient understands these risks and agreed to proceed.

DESCRIPTION OF PROCEDURE: After obtaining informed consent, the patient was taken to surgical suite and placed in left lateral decubitus position on the stretcher. Digital rectal exam was performed under anesthesia. There were no palpable nodules. Transrectal ultrasound probe was placed in the rectal vault. Prostate needle biopsies were taken as described above. The patient tolerated the procedure well and was taken to the recovery room in stable condition. He will be discharged back to the institution. My office will call or fax the report out there in 1-2 weeks.

Patient Name: Louis Pearlman
DOB: 06/19/1954
Age: 58
Sex: M
Tape #: 13/560
MR#:
DX: Cerebrovascular accident

Date: 04/30/13
Referring Physician: Dr. Nash (FCI)
HR: 53
BP:
BSA:
Sonographer: Lisa

INDICATIONS FOR THE STUDY
This is a 58 year old patient with a history of cerebrovascular accident and a cardiac murmur that is newly diagnosed. The patient has hypertension and diabetes.

M-MODE/2-D MEASUREMENTS

COLOR FLOW AND DOPPLER INTERPRETATION

1. Technically overall somewhat difficult study with 2D color flow, M-mode and spectral Doppler.
2. The patient has normal left ventricular internal dimension. Wall thickness appears normal. Regional wall motion is normal. Estimated ejection fraction of 55%.
3. There is aortic valve sclerosis with some mild to moderate calcific aortic valve stenosis. Peak velocity from the apical position measures 3 m/s giving a peak gradient of 37 mmHg and a mean gradient of 21 mmHg. This would suggest mild to moderate aortic stenosis. No significant aortic insufficiency is noted. The aortic root is mildly dilated.
4. The mitral valve leaflets are mildly sclerotic but open well. The left atrium is mildly dilated. There is a trace of mitral regurgitation. Mitral valve Doppler profile suggests Grade I diastolic dysfunction.
5. Right atrial and right ventricular dimensions do not appear to be enlarged. Tricuspid valve appears normal. Right ventricular function appears normal. The pulmonic valve is not well seen. There is a trace of tricuspid insufficiency. Estimated right ventricular systolic pressure is 20-25 mmHg.
6. There are no obvious masses or thrombi seen on transthoracic imaging.
7. There is no significant pericardial effusion.

IMPRESSION
Findings suggest mild to moderate aortic stenosis with good systolic function.

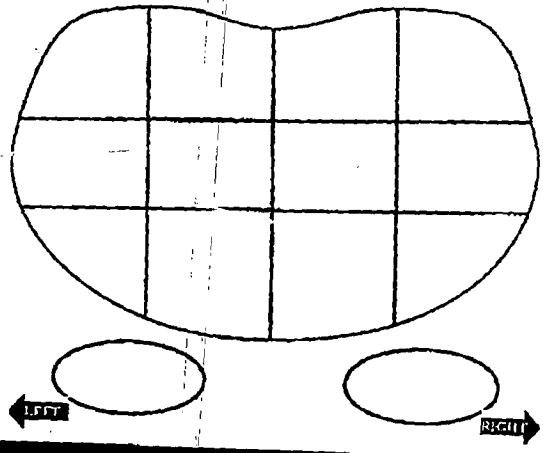
Diagnosis Summary

Surgery Center of Northeast Texas, Acct#: 3466.
Prostate gland needle biopsies A,B,C,D,E,F,G, and H: Benign prostatic tissue. No evidence of invasive adenocarcinoma or high grade prostatic intraepithelial neoplasia identified. Scattered areas of chronic inflammation and gland atrophy noted.

Prostate Biopsy Diagram



Photomicrograph

Micro Description

The sections A through H consist of 16 fragments of prostate from 8 areas. There is no evidence of invasive adenocarcinoma or high grade prostatic intraepithelial neoplasia identified. Scattered mild chronic inflammation and gland atrophy is noted.

MEDICAL RECORD	REQUEST FOR ADMINISTRATION OF ANESTHESIA AND FOR PERFORMANCE OF OPERATIONS AND OTHER PROCEDURES

A. IDENTIFICATION

OPERATION OR PROCEDURE

Therapeutic/Diagnostic Injection

B. STATEMENT OF REQUEST

1. The nature and purpose of the operation or procedure, potential benefits and drawbacks, potential problems related to recuperation, likelihood of success, possible results of non-treatment, and any significant alternatives have been fully explained to me. I have also been informed that there are other risks, which include but are not limited to severe loss of blood, infection, and cardiac arrest, that are attendant to the performance of any surgical procedure. I acknowledge that no guarantees have been made to me concerning the results of the operation or procedure. I understand the nature of the operation or procedure to be: (Description of operation or procedure in layman's language)

Injection techniques are helpful for diagnosis and therapy in a wide variety of conditions. The injections may be used to determine the cause of the condition (diagnostic), to treat the condition (therapeutic), or both diagnostic and therapeutic. Often, a diagnosis can be made from analysis of tissue, cells, or fluid. In addition, the assessment of pain relief and increased range of motion can be used as a diagnostic tool. Therapeutic indications include the delivery of local anesthetics for pain relief and the delivery of corticosteroids for suppression of inflammation.

which is to be performed by or under the direction of Beverly Stuart

On 10/03/2013 (date)

2. I request the performance of the above - named operation or procedure and of such additional operations or procedures as are found to be necessary or desirable, in the judgment of the professional staff of the below - named medical facility, during the course of the above - named operation or procedure.
3. I request the administration of such anesthesia as may be considered necessary or advisable in the judgment of the professional staff of the below named facility.
4. Exceptions to surgery or anesthesia, if any, are:
5. I request the disposal by authorities of the below - named medical facility of any tissues or parts which it may be necessary to remove.
6. I understand that photographs and movies may be taken of this operation , and that they may be viewed by various personnel undergoing training or indoctrination at this or other facilities. I consent to the taking of such pictures and observation of the operation by authorized personnel, subject to the following conditions.
   a. The name of the patient and his/her family is not used to identify said pictures.
   b. Said pictures be used only for purposes of medical/dental study or research.

C. SIGNATURES (Appropriate items in Parts A and B must be completed before signing)

1. COUNSELING PRACTITIONER: I have counseled this patient as to the nature of the proposed procedure(s), attendant risks involved, and expected results, as described above.

Beverly Stuart PAC

Your response must come from the departmental mail box. Responses from personal mailboxes WILL NOT be delivered to the inmate.

Inmate Message Below

I'm sorry to bother you but I was just wondering how much longer until my name reaches the top of the Dental waiting list? Thank you.

You were placed on the dental waiting list on 2-2-10. You are on the schedule to be seen within the next couple of weeks. Please continue to watch the call out.

Thank You,
R. Flanery, Dental Tech.

MLP has evaluated and signed off of this document. MLP will follow up all pending, previous, and future labs, radiographic studies, consults, and follow ups with the exception of the physician mandated reviews and follow ups. Risk factors and preventative medical interventions and follow ups will be done by the MLP in accordance with BOP program statements and guidelines. MLP understands such and will follow up with the above. MLP will assure that, at a minimum, standards of care are met at according to current medical guidelines.

MEDICAL TREATMENT REFUSAL

CDFRM

U.S. DEPARTMENT OF JUSTICE — FEDERAL BUREAU OF PRISONS

5-22-2014
Date

I, LOUIS PEARLMAN 02775-093 , **refuse treatment recommended by the Federal Bureau of Prisons Medical staff for the following condition(s):**

DESCRIBE CONDITION IN LAYMAN'S TERMINOLOGY:

previous stroke causing Left leg deficit

The following treatment(s) was/were recommended:

Staff supervised physical therapy

Federal Bureau of Prisons Medical staff members have carefully explained to me that the following possible consequences and/or complications may result because of my refusal to accept treatment:

staff will not be available to correct exercise procedures as needed, possibly resulting in injury or negative results.

I understand the possible consequences and/or complications, listed above, and still refuse recommended treatment. I hereby assume all responsibility for my physical and/or mental condition, and release the Bureau of Prisons and its employees from any and all liability for respecting and following my expressed wishes and directions.

Free PSA(%)	Sensitivity(%)	Specificity(%)
< or = 25	85	19
< or = 30	93	9

(3) Catalona et al.:JAMA 277: 1452-1455 (1997)
(4) Catalona et al.:JAMA 279: 1542-1547 (1998)

(x) These estimates vary with age, ethnicity, family and DRE results.
(*) The diagnostic usefulness of % Free PSA has not been established in patients with total PSA below 2.6 ng/mL
(+) In men with PSA above 10 ng/mL, prostate cancer risk is determined by total PSA alone.

PSA was performed using the Beckman Coulter Immunoassay method. Values obtained from different assay methods cannot be used interchangeably. PSA levels, regardless of value, should not be interpreted as absolute evidence of the presence or absence of disease.

CREATININE, RANDOM URINE	106		20-370 mg/dL
MICROALBUMIN, RANDOM URINE (W/CREATININE)			
MICROALBUMIN	1.9		mg/dL
			Reference Range Not established
MICROALBUMIN/CREATININE RATIO, RANDOM URINE	18		<30 mcg/mg creat

The ADA defines abnormalities in albumin excretion as follows:

Category	Result (mcg/mg creatinine)
Normal	<30
Microalbuminuria	30-299
Clinical albuminuria	> OR = 300

The ADA recommends that at least two of three specimens collected within a 3-6 month period be abnormal before considering a patient to be within a diagnostic category.

large mole on right middle back

ASSESSMENT:

Skin Integrity, Alteration in

Patient states accidentally hit his back with edge of locker door. He states door hit his mole on back.

BOP FOIA 2016-07384

Patient has large dark mole (Aprox 12mm round mole/growth) on right middle back that is partially cut, Approx 6 mm liner cut. Patient had moderate amount of bleeding in the area but stopped with pressure.
Patient mole is large dark, irregularly shaped growth with uneven redish/ brown, coloring.
Wound was cleaned with NS. dry, applied beta dine and placed 2x2 and covered with Tegaderm.
Patient was instructed to return to the clinic next day for dressing change and to come to "Sick Call" during next business hours to have mole evaluated by MLP/MD
Patient verbalize understanding.

PLAN:

Schedule:

Activity	Date Scheduled	Scheduled Provider
Assessment	10/14/2014 10:00	MLP 01
Please evalate patient mole on back.		

Disposition:

Follow-up at Sick Call as Needed
To be Evaluated by Provider

Transfer Intake Screening

Inmate Name:	PEARLMAN, LOUIS J			Reg #:	02775-093
Date of Birth:	06/19/1954	Sex:	M Facility: MIA	Unit Team:	G
Date:	09/18/2014 08:32	Provider:	Vincent, Nichole Psychology		

Date of Intrasystem Transfer: 09/09/2014 Transfered From: TEX--TEXARKANA FCI

1. **Review of Inmate's PSIQ indicates that an in-person interview is clinically indicated?** No
2. **Review of Inmate's MENTAL HEALTH record indicates that an in-person interview is clinically indicated?** No
3. **Review of Inmate's SENTRY record indicates that an in-person interview is clinically indicated?** No
4. **Is there any other information which indicates current need or request for Psychological Services?** No

Summary

This transfer intake screening was completed by Ms. Vincent, M.S., predoctoral practicum student, under the licensed supervision of Dr. Skibinski. After a review of the PSIQ, mental health, and SENTRY data, no clinical indications are present which warrant a clinical interview. The Inmate Handbook contains information concerning Psychology Services and the inmate will attend an Admission and Orientation session where Psychology Services will be reviewed.

Completed by Vincent, Nichole Psychology Intern on 09/18/2014 08:44

MEDICAL RECORD — **REQUEST FOR ADMINISTRATION OF ANESTHESIA AND FOR PERFORMANCE OF OPERATIONS AND OTHER PROCEDURES**

A. IDENTIFICATION

OPERATION OR PROCEDURE

Therapeutic/Diagnostic Injection

B. STATEMENT OF REQUEST

1. The nature and purpose of the operation or procedure, potential benefits and drawbacks, potential problems related to recuperation, likelihood of success, possible results of non-treatment, and any significant alternatives have been fully explained to me. I have also been informed that there are other risks, which include but are not limited to severe loss of blood, infection, and cardiac arrest, that are attendant to the performance of any surgical procedure. I acknowledge that no guarantees have been made to me concerning the results of the operation or procedure. I understand the nature of the operation or procedure to be: (Description of operation or procedure in layman's language)

Injection techniques are helpful for diagnosis and therapy in a wide variety of conditions. The injections may be used to determine the cause of the condition (diagnostic), to treat the condition (therapeutic), or both diagnostic and therapeutic. Often, a diagnosis can be made from analysis of tissue, cells, or fluid. In addition, the assessment of pain relief and increased range of motion can be used as a diagnostic tool. Therapeutic indications include the delivery of local anesthetics for pain relief and the delivery of corticosteroids for suppression of inflammation.

which is to be performed by or under the direction of Beverly Stuart

On 08/26/2014 (date)

2. I request the performance of the above - named operation or procedure and of such additional operations or procedures as are found to be necessary or desirable, in the judgment of the professional staff of the below - named medical facility, during the course of the above - named operation or procedure.
3. I request the administration of such anesthesia as may be considered necessary or advisable in the judgment of the professional staff of the below named facility.
4. Exceptions to surgery or anesthesia, if any, are:
5. I request the disposal by authorities of the below - named medical facility of any tissues or parts which it may be necessary to remove.
6. I understand that photographs and movies may be taken of this operation , and that they may be viewed by various personnel undergoing training or indoctrination at this or other facilities. I consent to the taking of such pictures and observation of the operation by authorized personnel, subject to the following conditions.
   a. The name of the patient and his/her family is not used to identify said pictures.
   b. Said pictures be used only for purposes of medical/dental study or research.

C. SIGNATURES (Appropriate items in Parts A and B must be completed before signing)

1. COUNSELING PRACTITIONER: I have counseled this patient as to the nature of the proposed procedure(s), attendant risks involved, and expected results, as described above.

Beverly J. Stuart PAC

Hospital Summary

Mr. Pearlman is a 60 year old male inmate with a PMH of hypertension, DM, previous CVA in 2010. He was admitted to LCH after a shave biopsy performed by the dermatology team returned positive for malignant melanoma with involved borders and a Breslow thickness of 7 mm with staging at pT4b.

Patient was admitted on 4/6/15 for follow up of shave biopsy that was performed on 3/30/15. The lesion that was biopsied was painless and originally noticed in October. During bedside wound inspection, the wound was 3-4 cm in diameter, granulation tissue was present, borders were red and raised, and there was yellow/green exudate. The pathology results of the biopsy were discussed with the patient. General Surgery, Wound Care, and Heme/Onc were all consulted.

On 4/7/15, patient had no complaints and there were no events overnight. General surgery recommended CXR and baseline hepatic studies. Patient s BP was 148/65 despite being on multiple hypertensive medications including amlodipine, HCTZ, metoprolol, and prinivil, thus a renal US was ordered to rule out renal association with hypertension. US showed small cyst at the mid pole of the left kidney. The radiology team recommended CT abd/pelvis for for further evaluation.

On 4/8/2015 the patient had wide excisional surgery of malignant melanoma on the skin of the back with sentinel lymph node biopsy of the right axilla with gamma probe. Two lymph nodes were removed from the right axilla and sent to pathology along with the excisional specimen. Patient had no complications post op and quickly advanced to a regular diet.

Hematology/Oncology team recommended PET scan. The PET scan was performed along with CT Abd/pelvis. After the imaging was performed, it was determined that the patient was clinically stable enough for discharge with follow up at the outpatient Hematology/Oncology clinic to review the results of his PET scan, biopsy results, special biopsy stains, and CT abd/pelvis.

SUBJECTIVE:
This is a 60-Year-Old Incarcerated Male Patient with a Medical History of kidney cyst, recent negative colonoscopy and prostate biopsy that presented on 04/06/2015 from the Prison for follow-up to a shave biopsy with tissue pathology consistent with malignant melanoma.

The patient first noticed the lesion in October. The patient reports a 65lb weight loss since a CVA in 2010, but denies any other constitutional symptoms such as fever, chills, night sweats, or fatigue. The patient is received a wide excisional biopsy of lesion with right axilla lymph node sentinel biopsy on 04/08/2015. The patient underwent a PET/CT and 2D Echocardiogram on 04/10/2015.

The patient was seen and examined at bedside. The patient is AAOx3, in no acute distress, and denies any complaints of headache, chest pain, shortness of breath, palpitations, abdominal pain, N/V/C/D, lower extremity swelling, or urinary complaints.

OBJECTIVE:
Vital Signs as Above
Physical Exam
General: NAD, well groomed and nourished.
HEENT: No Scleral Icterus, No Exudates, No post pharyngeal erythema or areas of hyperpigmentation
Neck: No Bruits, No lesions seen, No masses, No lymphadenopathy
Cardiovascular: No axillary LAD, +S1/S2, RRR, 1/6 SEM
Lungs: CTA B/L No R/R/W.
Abd: +BSA4Q, Soft, NT/ND, Obese, No HSM
Ext: Dorsalis pedis pulse 1/4 wnl bil. radial pulse wnl 2/4 bil. (-) pitting Edema. (-)homan bil
Skin: Extensive freckling present bil UE/face/LE. 1cm scab lesion on bil mid-tibia. mild discoloration bil feet. Fair skinned with light colored hair and eyes. (+)ecchymosis bil knees. Right upper back with wide-excisional biopsy that is clean/dry/non-erythematous, wound dressing back in place. Right axilla incision clean/dry/non-erythematous.
Psych: good eye contact, denies hallucinations auditory/visual/tactile. denies SI/HI. calm. engaged and interactive. pleasant and polite. Speech is linear and goal focused.
Neuro: GCS: 15
MS: AOx4/4. Able to follow 3-step complex command that crosses midline. Spontaneous speech fluent, non-dysarthic, and demonstrates moderate fund of knowledge.
CN: Left facial droop with depressed Left nasolabial fold. otherwise CN 2-12 grossly intact. Motor: tone wnl. strength mildly decreased left UE 4-/5, LE 4-/5 and right 5/5 UE and LE. Intact to LT bil UE and LE.

Labs:
As Above

OTHER:
PAHTOLOGY:
Wide excisional biopsy and sentinel node biopsy (04/09/2015) -
1) Pending Report, Grossed

Pathology per records:
1) Malignant melanoma Breslow 7 mm, Clark's level 4, ulceration present, mitotic rate 14/mm2 stage P24B margins not clear

IMAGING:
PET/CT (04/10/2015) - Performed, pending read

MRI Brain - Cancelled

2D Echo (04/09/2015) - Performed, pending read

Scint exam b/l axilla and groin (04/08/2015) - Pending read

Xray B/L Knees (04/08/2015) -

CXR (04/07/2015) - No Acute Process

Renal US (04/07): Left Kidney Mid-pole cyst

ASSESSMENT/PLAN:
1) Malignant Melanoma -
- On 04/08/2015 wide excisional and axilla lymph node biopsy performed, awaiting pathology.
- PET scan w/CT skull-thigh performed, awaiting read
- MRI Brain w/ and w/o contrast cancelled per Dr. Wolf.
- If sentinel biopsy is positive, the patient will need an axillary dissection.
- If negative, then watchful waiting
- Options for therapy include systemic adjuvant interferon vs monoclonal therapy.

2) Fall 2/2 vasovagal vs. other -
- Defer to primary care tx
- Nexxus criteria negative
- Orthostatic vitals are: negative, standing HR 60, BP 137/60, laying down HR 66, BP 154/71

3) Systolic Murmur -
- ECHO performed, awaiting official

COMMENTS:
If sentinel biopsy is positive then he will require an axillary lymph node dissection. If negative then watchful waiting will ensue. Pt will likely require systemic interferon or monoclonal antibody regime.

From the Hem Onc perspective, the patient is clear for discharge. Hem Onc is suggesting the patient to follow-up at the Multispecialty Clinic on Tuesday 04/14/2015 to review tissue pathology from the sentinel lymph node and results from PET/CT scan.

PEDRO KILIDDJIAN, M.D.

SURGICAL CONSULTATION

DOS: 04/09/2015

Sixty-year-old patient seen through the courtesy of Internal Medicine with a history of diagnostic melanoma of the right upper back. The patient states having dark lesion in the back with no itching, no pain and no bleeding. This lesion has been increasing in size and was seen by the dermatologist. We did shave biopsy with the result of melanoma. I was called for surgical treatment. I explained to the patient the surgical treatment, the benefits of having wide excision with sentinel lymph _____ (nodes) removal and he understood, and has agreed with the procedure, so we are going to go ahead with wide excision of melanoma of the right upper back and removal of sentinel lymph _____ (node) of the right axilla.

PEDRO KILIDDJIAN, M.D.

SURGICAL CONSULTATION

DOS: 04/07/2015

The patient is a 60-year-old obese patient with a lesion in the right upper back approximately 1.5 to 2 cm in diameter. It is a flat skin lesion that does not bother him, no pain, no itching, no bleeding, and has been increasing in size, seen by the dermatologist who performed a shave biopsy, which showed melanoma without _____. The rest of the back is normal. There are no satellite lesion. The neck is completely normal with no palpable masses. The thyroid gland is normal. Both supraclavicular fossae are completely normal with no palpable masses. The right axilla is due to the obesity of the patient there is no palpable masses as well. I explained to the patient the surgery, which is going to be a wide excision of the lesion with localization of satellite lymph nodes. This is the procedure to be performed, I repeat with wide excision of the tumor. I explained the benefits and complications and he has agreed to have this procedure performed.

OPERATIVE REPORT

DOS: 04/08/2015

SURGEON: Dr. Kiliddjian.

FIRST ASSISTANT: _____ (Dr. Philip Prakt.)

PREOPERATIVE DIAGNOSIS: Melanoma of right upper back.

POSTOPERATIVE DIAGNOSIS: Melanoma of right upper back.

PROCEDURES:
1. Wide excision of right upper back and melanoma.
2. Right axillary dissection and removal of right sentinel lymph node.

JUSTIFICATION: This is a 60-year-old patient that was seen with the courtesy of Dr. J.D. Suarez with a history of upper back lesion for many years and who had punch biopsy by the dermatologist with the diagnosis of melanoma send to me to be removed and a wide excision of the right upper back lesion was scheduled with right axillary dissection to remove the right sentinel lymph nodes. I explained to the patient the benefits and complications and he has agreed to have this procedure performed.

SURGICAL DESCRIPTION: Under adequate general anesthesia the patient was placed in supine position and the axilla was prepared in aseptic usual fashion. The surgical field was limited with sterile labs with probe and finding the _____ (signal), transverse incision was performed in the upper axilla. The subcu was entered with second scalpel as well as the fat tissue. With the help of the probe the sentinel lymph nodes were localized and removed and sent to Pathology.

OPERATIVE REPORT

DOS: 04/08/2015

Then the area was reviewed for bleeders, irrigation was done with saline, subcu was closed with 3-0 Vicryl interrupted stitches and the skin with 4-0 Monocryl subcuticular stitch. Then the patient was placed laterally in left lateral position and the right upper back was prepared in aseptic usual fashion. A 2 cm for each direction was marked in ink and the wide excision of the lesion was done in this fashion. The incision was taken down to subcutaneous tissue and the lesion was completely removed marking the upper end at 12 o'clock and the lower end at 6 o'clock with different marking stitches. The both flaps are undermined and reviewed for bleeders and the subcu closed with 3-0 Vicryl interrupted stitches and the skin with 4-0 Monocryl subcuticular stitches. This incision was infiltrated with Marcaine 0.25%. The patient sent back to recovery room in stable condition

Larkin Community Hospital

Name	Pearlman, Louis J	Date of Service	Apr-08-2015 0701	DOB	Jun-19-1954 (M)
Attending	MICHEL GEORGE J MD	Admitted	Apr-06-2015	Encounter	704026
Primary	RICOTTI CARLOS MD	Discharged	-	MRN	309861

Plan

1) Malignant melanoma of right lower back
- POD # 0 s/p wide excision of melanoma on back with sentinel node biopsy of the right axilla with gamma probe
- Pathology report from last week's shave biopsy showed malignant melanoma with a Breslow thickness of 7 mm, current staging: pT4b
- Pending special staining and BRAF testing results

2) Diabetes Mellitus
- Hemoglobin A1C elevated at 7.9
- Glucose checks elevated and ranging from 159 to 275
- Will increase Novolog SSI from mild to moderate
- Continue to monitor glucose and adjust medications as needed
- Will start on clear liquids and advance diet as tolerated
- Morning labs tomorrow

3) HTN
- BP today 121/65
- Patient is currently on multiple anti-hypertensive medications including metoprolol, HCTZ, prinivil, and amlodipine
- Renal US showed a small cyst at the mid pole of the left kidney. Radiology recommends a CT scan of the abdomen and pelvis for further evaluation.

4) Dyslipidemia
- Triglycerides elevated at 226, HDL at 23, LDL at 68, VLDL 45.2
- Currently on Lipitor 10 mg qhs

Patient seen with Dr. Michel who agrees with assessment and plan.

HPI / Subjective

Mr. Pearlman was seen and examined at bedside this morning. He is POD #1 s/p excisional surgery of malignant melanoma and sentinel LN biospy. He denies any pain currently. Yesterday he was started on a clear liquid diet that was advanced quickly to a regular diet which he is tolerating well. He ate a full breakfast this morning without incident.

Nursing denies any acute events overnight. He currently denies any fever, chills, nausea, vomiting, diarrhea, chest pain or SOB.

Thank you for your consult on this pt.
Discussion: 04/09/2015 Pt MRI Brain and PET/CT scan outstanding. Miami Nueroscience aware of MRI order. Sentinel Node biopsy/ECHO performed and pending read.

If sentinel biopsy is positive then he will require an axillary lymph node dissection. If negative then watchful waiting will ensue. Pt will likely require systemic interferon or monoclonal antibody regime. thank you

From the Hem Onc perspective, the patient is clear for discharge. Hem Onc is suggesting the patient to follow-up at the Multispecialty Clinic on Tuesday 04/14/2015 to review tissue pathology from the sentinel lymph node and results from PET/CT scan.

Pt S&E. Case discussed and plan formulated w/attending Dr.Dominguez.

Hospital Summary

Mr. Pearlman is a 60 year old male inmate with a PMH of hypertension, DM, previous CVA in 2010. He was admitted to LCH after a shave biopsy performed by the dermatology team returned positive for malignant melanoma with involved borders and a Breslow thickness of 7 mm with staging at pT4b.

Patient was admitted on 4/6/15 for follow up of shave biopsy that was performed on 3/30/15. The lesion that was biopsied was painless and originally noticed in October. During bedside wound inspection, the wound was 3-4 cm in diameter, granulation tissue was present, borders were red and raised, and there was yellow/green exudate. The pathology results of the biopsy were discussed with the patient. General Surgery, Wound Care, and Heme/Onc were all consulted.

On 4/7/15 patient had no complaints and there were no events overnight. General surgery recommended CXR and baseline hepatic studies. Patient's BP was 148/66 despite being on multiple hypertensive medications including amlodipine, HCTZ, metoprolol, and prinivil, thus a renal US was ordered to rule out renal association with hypertension. US showed small cyst at the mid pole of the left kidney. The radiology team recommended CT abd/pelvis for for further evaluation.

On 4/8/2015 the patient had wide excisional surgery of malignant melanoma on the skin of the back with sentinel lymph node biopsy of the right axilla with gamma probe. Two lymph nodes were removed from the right axilla and sent to pathology along with the excisional specimen. Patient had no complications post op and quickly advanced to a regular diet.

Hematology/Oncology team recommended PET scan. The PET scan was performed along with CT Abd/pelvis. After the imaging was performed, it was determined that the patient was clinically stable enough for discharge with follow up at the outpatient Hematology/Oncology clinic to review the results of his PET scan, biopsy results, special biopsy stains, and CT abd/pelvis.

HPI / Subjective

Patient seen and examined at bedside. Denies any current complaints. Nursing reports that he fell this morning around 6 am. He got up from the bed to use the restroom when he became dizzy and fell unto his knees. He denies hitting his head or losing consciousness. He was able to pick himself back up. The night team evaluated him and then ordered bilateral Xrays of the knees.

Patient is scheduled for surgery this morning at 11 am. He is scheduled for a scintigraphy scan of the bilateral axilla and groin, followed by wide excision of melanoma on back with sentinel lymph node biopsy of bilateral axilla and groin with gamma probe. Possible bilateral axillary lymph node dissection.

ROS: Currently denies any fever, chills, nausea, vomiting, HA, weakness, h/o seizures or h/o orthostatic hypotension.

Patient is a 60yo RHWM who presented to LCH on 04/06/2015 from Prison for fup to a shave biopsy from last week with results consistent of malignant melanoma per pathology report. His Lesion was reportedly noticed by himself in October. Past medical history includes kidney cyst, a recent clean colonoscopy and prostate biopsy. Intentional weight loss of 65lbs since his CVA in 2010 however no other constitutional symptoms. Pt is POD#1 from wide excisional biopsy of lesion with right axilla lymph node sentinenal biopsy as well.

S: Pt S&E this AM at bedside. Pt had breakfast this AM consisting of eggs that was tolerated well w/no N/V/Abd pain. Pt is AOx3, hopeful, and denies all complaints. Pt has had no falls today nor any episodes of pre-vasovagal. No overnight events.

ROS: (-)HA/vision changes/CP/SOB/Palpitations/N/V/Abd pain/N/V/F/C/paratheslas/weakness.

Physical Exam
General: NAD, well groomed and nourished.
HEENT:
Head: NCAT. no pharyngeal erythema or exudate. Gross Dentition wnl.

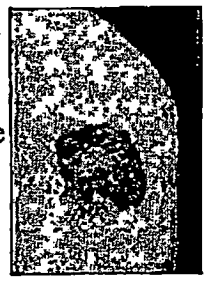
Melanoma Recurrence



When melanoma comes back after it has been treated, it is called a *recurrence* (or return). When a recurrence comes back in the same spot it was removed, it is called a local recurrence. It may come back in other parts of the body distant to this. This is called metastatic disease or metastases. If you have had melanoma in the past, you are at increased risk for recurrence. Some patients with a past history of melanoma develop a second primary tumor (a recurrence of the tumor in the same location) over time.

It is not usually possible to know what the rate of recurrence will be. The more advanced a melanoma is, the more likely it will be to recur. Melanomas which are thicker, ulcerated, or with some patches of melanoma nearby are more likely to reoccur. The following are descriptions of percentages of the rates of recurrence:

- Low-risk: less than 20% risk of recurrence
- Intermediate-risk: 20-50% risk of recurrence
- High-risk: greater than 50% risk of recurrence. High-risk melanoma has a high probability of having already spread at the time of treatment

CAUSES

Sunlight, passed from parents (*heredity*), and where you live all help to cause melanomas. UV (ultra-violet) light from the sun is damaging to the skin. There is more damage if you have fair skin. There are greater chances of getting skin cancer if you live in a hot, sunny climate. In other words, the same things that caused your first melanoma are at work to cause a recurrence.

DIAGNOSIS

A recurrent melanoma can often be diagnosed by an exam. This means your caregiver can tell by looking at it. This is often described as *in situ*, which means, remaining in place. It may be described as invasive, which means the growth, has spread. This is much more serious if it has spread. Sometimes a suspected abnormality must be removed and looked at under a microscope by a specialist (*pathologist*) to make a diagnosis.

TREATMENT

The treatment of recurrent melanomas is surgical and requires total removal of the melanoma. If the melanoma has spread before surgery can be done, then *chemotherapy* (use of medications to fight cancer) must be used. Your caregiver will discuss your treatment options with you. Continual work is being done to find better treatment for this disease.

If you have been diagnosed with melanoma before, you should follow up with your dermatologist regularly (every 6 months to a year) for skin checks.

 ©2015 ExitCare, LLC

BOP FOIA 2016-07384

You should also pay attention to your moles and bring attention to your doctor any changes in the moles (growth, change in color, bleeding, itching, etc). Look at your moles closely at least once a month. For areas hard to see, ask your spouse or someone else who is able to see these areas to help you look for changes. You may also use mirrors.

PREVENTION
The three S's:

- Slap on a hat (wide brimmed).
- Slip on a shirt (long sleeved).
- Slather on the sunscreen.

Avoid spending time out in the sun. Sunscreens with SPF 30 or higher and UVA and UVB block should be applied regularly. Sunscreen containing a physical block such as Zinc or Titanium oxide will also work. Apply sunscreen even for a brief exposure to sunlight. Reapply every 2 hours and after swimming or sweating. Wear sunscreen in all types of weather (cloudy, rainy, snowing, etc). Do not burn - avoid tanning, both indoor (using tanning beds) and outdoor. Prevention is the best therapy for this problem.

PATHOLOGY REPORT

PT: **PEARLMAN, LOUIS J.** AGE/SEX: 60 / M DOB: 6/19/1954 D15-22161

DR: LARKIN DERMATOLOGY CLINIC
6140 SW 70th Street, Second Floor
Miami, FL 33143

MR #: (305)-259-2100 COLLECTED: 03/30/15 REC'D: 03/30/15

02775_093

DIAGNOSIS:

SKIN, RIGHT LOWER BACK, SHAVE BIOPSY:
- MALIGNANT MELANOMA, BRESLOW'S THICKNESS 7 mm, CLARK'S LEVEL IV.
- ULCERATION: DETECTED.
- MITOTIC RATE: 14/mm2.
- STAGE: pT4b
- NOTE: Margins are involved. BRAF and special stain studies are being performed and an addendum report will follow.

NOTE: Report corrected to reflect patient's name and demographics as above 4-2-15 LK

PRE-OP/CLINICAL DX: Patient has a history of a lesion growing on right lower back changing color bleeding times 4 months.
Rule out MM.

SPECIMEN/SITE – GROSS DESCRIPTION:

SKIN, RIGHT LOWER BACK, SHAVE BIOPSY: This is an irregular portion of tissue measuring 3.8 cm; submitted complete (I-X).

MICROSCOPIC DESCRIPTION:

SKIN, RIGHT LOWER BACK, SHAVE BIOPSY:
Sections show an ulcerated nodular melanocytic proliferation arising from a superficially invasive melanoma. Atypical cells show various morphological features including epithelioid, round and spindle cell morphology. Tumor cells show hyperchromatic, enlarged nuclei and faintly pigmented cytoplasm. Tumor cells are present within the epidermis with a diffuse pagetoid scatter, involve the dermoepidermal junction and invade the dermis to Breslow thickness of 7 mm, Clark's level IV. 14 mitotic figures were counted on the millimeter squared. There is a patchy brisk lymphoid reaction associated with extensive regression. There is no evidence of lymphovascular, perineural invasion on the sections examined. No precursor lesion is identified. No significant tumor necrosis is present.

Surgery: Killiddjian

Hospital Summary

Mr. Pearlman is a 60 year old male inmate with a PMH of hypertension, DM, previous CVA in 2010. He was admitted to LCH after a shave biopsy performed by the dermatology team returned positive for malignant melanoma with involved borders and a Breslow thickness of 7 mm with staging at pT4b.

Patient was admitted on 4/6/15 for follow up of shave biopsy that was performed on 3/30/15. The lesion that was biopsied was painless and originally noticed in October. During bedside wound inspection, the wound was 3-4 cm in diameter, granulation tissue was present, borders were red and raised, and there was yellow/green exudate. The pathology results of the biopsy were discussed with the patient. General Surgery, Wound Care, and Heme/Onc were all consulted.

On 4/7/15, patient had no complaints and there were no events overnight. General surgery recommended CXR and baseline hepatic studies. Patient s BP was 148/65 despite being on multiple hypertensive medications including amlodipine, HCTZ, metoprolol, and prinivil, thus a renal US was ordered to rule out renal association with hypertension. US showed small cyst at the mid pole of the left kidney. The radiology team recommended CT abd/pelvis for for further evaluation.

On 4/8/2015 the patient had wide excisional surgery of malignant melanoma on the skin of the back with sentinel lymph node biopsy of the right axilla with gamma probe. Two lymph nodes were removed from the right axilla and sent to pathology along with the excisional specimen. Patient had no complications post op and quickly advanced to a regular diet.

Hematology/Oncology team recommended PET scan. The PET scan was performed along with CT Abd/pelvis. After the imaging was performed, it was determined that the patient was clinically stable enough for discharge with follow up at the outpatient Hematology/Oncology clinic to review the results of his PET scan, biopsy results, special biopsy stains, and CT abd/pelvis.

ASSESSMENT:

Initial assessment

Inmate returned from consult where he has been given the result of a PET/CT performed on 4/10/15.
There is Positive Metastatic Melanoma to one Lymph Node(1) Immunohistochemical Stains for S-100 and Melan A.
Recommendations:
1) MRI brain with and w/o contrast to r/o brain Mets.
2) Patient be referred to general surgery for R axillary lymph node dissection.
3) Following this procedure he will require adjuvant interferon alpha. However he will need to be transferred to Jackson memorial hospital since such treatment is not provided by Larkin.

Melanoma c sentinel nodes #2 removed. One positive and two second one Negative of metastasis Oncologyst advised strongly an axillary disection (Rt) to have more information of the rest of nodes and so the treatment the pt will have. This have been explained to the patient. Benefits and complications also explain Dx Melanoma c + sentinel node.

Completed By: Plan Surgery → Rt axillary disection.

Report may be hand-written or (preferably) typed on this form. If dictated on office or hospital letterhead to follow, please indicate essential findings or recommendations to be acted upon pending final report.

Follow-up services and primary responsibility for inmate health care remains with Bureau of Prisons staff. While discussion of diagnostic/treatment options with the inmate may be appropriate, they are subject to review by the inmate's primary care provider, the institution utilitzation review committee and/or the BOP National Formulary.

Please notify institution prior to scheduling surgery dates or follow-up appointments.

Inmate not to be informed of appointment dates.

Larkin Community Hospital

02775-093

Name:	Pearlman, Louis J	Date of Service:	May-05-2015 1301	DOB:	Jun-19-1954 (M)
Referring:	DOMINGUEZ CARLOS J	Entered:	May-05-2015	Encounter:	706563
Provider:	DOMINGUEZ CARLOS J MD	Cosigned:	-	MRN:	309861

60y Incarcerated Male Patient with a Medical History of kidney cyst, recent negative colonoscopy and prostate biopsy that was originally seen on 04/06/2015 from the Prison for follow-up to a shave biopsy with tissue pathology consistent with malignant melanoma.

The patient first noticed the lesion in October. The patient reports a 65lb weight loss since a CVA in 2010, but this has been intentional with increased exercise. Denies any other constitutional symptoms such as fever, chills, night sweats, or fatigue. The patient is received a wide excisional biopsy of lesion with right axilla lymph node sentinel biopsy on 04/08/2015. The patient underwent a PET/CT on 04/10/2015. Results as below.

The patient was seen and examined at bedside. Denies any complaints of headache, chest pain, shortness of breath, palpitations, abdominal pain, N/V/C/D, lower extremity swelling, or urinary complaints.

OBJECTIVE:
Vital Signs as Above
Physical Exam
General: NAD, resting comfortably
Neck: No Bruits, No lesions seen, No masses, No lymphadenopathy
Cardiovascular: +S1/S2, RRR, 1/6 SEM
Lungs: CTA B/L No R/R/W.
Abd: +BSA4Q, Soft, NT/ND, Obese, No HSM
Extr: trace b/l LE edema
Skin: Extensive freckling present bil UE/face/LE. Right upper back with wide-excisional biopsy that is clean/dry/non-erythematous, Right axilla incision clean/dry/non-erythematous, well healed.

OTHER:
PATHOLOGY:
03/30/15 R lower back skin shave biopsy:
- MALIGNANT MELANOMA, BRESLOW'S THICKNESS 7 mm, CLARK'S LEVEL IV. - ULCERATION: DETECTED. - MITOTIC RATE: 14/mm2. - STAGE: pT4b

04/09/15 Wide excision of right upper back melanoma with right axillary dissection and removal of sectional node.
1: - ONE LYMPH NODE, NEGATIVE FOR METASTATIC MELANOMA (0/1). - IMMUNOHISTOCHEMICAL STAINS FOR S-100 AND MELAN-A ARE NEGATIVE. B AXILLARY LYMPH NODE, RIGHT, TISSUE

2: - METASTATIC MELANOMA TO ONE (1) LYMPH NODE, (1/1). - IMMUNOHISTOCHEMICAL STAINS FOR S-100 AND MELAN-A ARE POSITIVE.

- FOCALLY ULCERATED SKIN WITH ACUTE AND CHRONIC INFLAMMATION, EDEMA AND PURULENT EXUDATE CONSISTENT WITH PREVIOUS BIOPSY SITE. - NO EVIDENCE OF RESIDUAL MELANOMA IDENTIFIED. - RESECTION MARGINS ARE NEGATIVE.

IMAGING:
PET/CT (04/10/2015) - IMPRESSION: - 1. MILD HYPERMETABOLIC ACTIVITY SEEN AT THE SURGICAL BED OF THE RIGHT BACK - WHICH IS NONSPECIFIC AND CONTINUED FOLLOW-UP IS RECOMMENDED. - 2. ADDITIONAL AREA OF HYPERMETABOLIC ACTIVITY NOTED WITHIN THE RIGHT AXILL ARY REGION WHICH IS LIKELY INFLAMMATORY IN THIS POSTOPERATIVE PATIENT. HOWE VER, CONTINUED FOLLOW-UP IS RECOMMENDED.

ASSESSMENT/PLAN:
1) Malignant Melanoma -
- On 04/08/2015 wide excisional and axilla lymph node biopsy performed, pathology confirms lymph node positive for metastatic melanoma.
- PET scan w/CT skull-thigh from 04/10/15 does not demonstrate any other sites of metastatic disease (results as above).
- Recommend MRI Brain w/ and w/o contrast to r/o brain mets.
- Recommend patient be referred to general surgery for R axillary lymph node dissection.
- Following this procedure he will require adjuvant interferon alpha. However Larkin hospital will be unable to provide this medication, recommend his care be transferred to a different facility such as Jackson hospital after the R axillary lymph node dissection.

DISCHARGE SUMMARY

DOS: 05/22/2015

ADMITTING DATE: 05/19/2015

DISCHARGE DATE: 05/22/2015

Mr. Pearlman is a 60-year-old inmate patient. The patient came to the hospital from the Detention Center and has been admitted at this time to Larkin Community Hospital with an admitting diagnoses of:
1. Malignant neoplasm of lymph node axilla, arm.
2. History of TIA.
3. Diabetes mellitus.
4. Hypertension, NOS.

HISTORY OF PRESENT ILLNESS: Mr. Louis Pearlman is a 60-year-old male patient. The patient presented to the hospital with right upper back melanoma. The patient presented also with lymph node metastasis. The patient has been admitted at this time to Larkin Community Hospital.

PAST MEDICAL HISTORY: The patient has a history of TIA, stroke, malignant melanoma of the trunk, diabetes mellitus, hypertension, cardiac dysrhythmia.

For admitting medications: Please refer to MAR. The consultant in this case is Dr. Pedro Kiliddjian.

On 05/21/2015, Dr. Kiliddjian saw and evaluated the patient. The patient is a 60-year-old male patient who had a right upper back melanoma removed with the sentinel lymph nodes _____ to rule out lymph node metastasis. The patient went to oncologist and oncologist preferred to have full resection of the right axilla in order to place in chemotherapy properly.

DISCHARGE SUMMARY

DOS: 05/22/2015

I explained to the patient again the procedure, the benefits and complications. I explained to the patient possibility of having it drained according to the extent of the dissection of the right axilla and he has agreed to have this procedure done. At this point in time, after obtaining informed consent, the patient is going to be taken to OR for a procedure. The procedure performed at this time is a right axilla dissection. Postoperative diagnosis is right upper back melanoma. After the procedure, patient tolerated the procedure well and was taken to the recovery room stable.

On 05/22/2015, the patient has been seen. The chart has been reviewed. The patient is a 60-year-old male patient status post excision of axillary lymph node. The patient is stable at this time. The patient denies any shortness of breath, nausea, vomiting or diarrhea. No headache, no dizziness. No chest pain. Please be advised, the patient is allergic to penicillin. The patient's vital signs are stable with blood pressure of 137/78, heart rate 78, respiratory rate 17, temperature 98.2. Labs show glucose of 169, BUN 17, creatinine 0.89, sodium 137, potassium 4, chloride 100. WBC 6.5, hemoglobin 13.4, hematocrit 38.9, platelet count 281. The patient today is going to be discharged back to the Detention Center stable at this time.

For discharge medications, please refer to MAR. This information has been provided to the patient and caretaker. The patient was discharged back to the Detention Center stable at this time. Please be advised, education was provided to the patient and family members. Please be advised, the patient needs to be followed up by primary within 3 to 10 days from discharge date.

DR: GEORGE J. MICHEL, M.D.
PEDRO KILIDDJIAN, M.D.
LARKIN HOSPITAL
HOSPITAL#: 0707894 COLLECTED: 05/21/15 REC'D: 05/22/15

PRE-OP/CLINICAL DX: Metastatic melanoma, right axillary node

SURGICAL PROCEDURES: Right axillary node dissection.

SPECIMEN/SITE – GROSS DESCRIPTION:

AXILLARY, RIGHT, NODE, DISSECTION: Multiple lipomatous tissue fragments in aggregate 8.5 x 6.2 x 4.5 cm. Cut section through the largest fragment reveals a 3.5 x 2.5 cm. white gray, indurated stellate shaped area consistent with a scar surrounded by multiple foci of white yellow gray tissue consistent with fat necrosis. Sections are coded 1 to 4. The remaining tissue is lipomatous. Cut section through the remaining tissue fragments reveals a 1.0 cm. in diameter yellow gray nodule. Bisected and submitted coded 5. Random sections are coded 6 to 10. (ARM/msh 05/22/15)

DIAGNOSIS:

AXILLARY, RIGHT, NODE, DISSECTION:
- **FOUR (4) LYMPH NODES WITH SIGNIFICANT XANTHOGRANULOMATOUS INFLAMMATION, FAT NECROSIS AND REACTIVE FIBROSIS.**
- **NEGATIVE FOR ATYPIA OR MALIGNANCY.**

NOTE: 88307- TC x 1

PEDRO KILIDDJIAN, M.D.

OPERATIVE REPORT

DOS: 05/21/2015

SURGEON: Dr. Kiliddjian.

FIRST ASSISTANT: Dr. Quoc Dang.

PREOPERATIVE DIAGNOSIS: Right upper back melanoma.

POSTOPERATIVE DIAGNOSIS: Right upper back melanoma.

PROCEDURE: Right axillary dissection.

JUSTIFICATION: This is a 60-year-old patient who had a right upper back melanoma removed with sentinel lymph nodes done to rule out lymph node metastasis. The patient went to oncologist and oncologist preferred to have full axillary dissection of the right axilla in order to place in chemotherapy properly. I explained to the patient again the procedure, the benefits and complications. I explained to the patient possibility of having a drain according to the extent of dissection of the right axilla and he has agreed to have this procedure performed. The patient had preoperative antibiotic and will stay after surgery in the unit.

SURGICAL DESCRIPTION: Under adequate general anesthesia the patient was placed in supine position and the right arm was placed in 90 degrees. The right axilla was prepped as usual and after a correct time-out the incision was done following the previous one. This new incision is a little bit bigger in extent to the previous one to facilitate the dissection. The subcutaneous tissue was entered and a lot of fibrotic tissue was found from previous dissection.

PEDRO KILIDDJIAN, M.D.

OPERATIVE REPORT

DOS: 05/21/2015

These fibrotic tissues are removed and the _____ fat tissue of the rest of the axilla was completely removed from the lower or external edge of the right pectoralis muscle to the right latissimus dorsi muscle in the external aspect. The upper limits of the dissection was far from the brachial plexus and vessels and with blunt and sharp dissection of the soft fat tissue was removed and sent to Pathology. No vessels, no nerves, and no veins are injured and the area was reviewed for bleeders as usual as well as irrigation with saline solution was performed. The subcutaneous tissue was closed with 3-0 Vicryl interrupted stitches after placing a #7 Jackson Pratt and exteriorized through a stab wound. The skin was closed with 4-0 Monocryl subcuticular stitches. The patient remained stable. No complications. Sponge and needle count is correct. Send back to recovery room in stable condition.

General Surgery Consult History and Physical

Larkin Community Hospital

Name	Pearlman, Louis J	Date of Service	May-19-2015 1816	DOB	Jun-19-1954 (M)
Attending	MICHEL GEORGE J MD	Admitted	May-19-2015	Encounter	707994
Primary	MICHEL GEORGE J MD	Discharged	-	MRN	309861

Assessments

Malignant melanoma
Secondary malignant neoplasm of lymph node

Recommendations

Plan for right axillary lymph node dissection
Will discuss case with attending

Chief Complaint

Consult h/o melanoma

HPI / Subjective

60 y/o M with PMHx melanoma, DLD, HTN, DM, and CVA admitted for melanoma. General surgery was consulted for further work up for malignancy and lymph node dissection. Pt is s/p local excision for melanoma with one positive lymph node on sentinel node biopsy. Most recent PET/CT showed inflammation in the right axilla.

Patient seen and examined at bedside; he is AAO x 3 and appears to be in NAD. He complains of headache and dizziness to which he attributes to not having a meal since 11 am. He denies any CP, SOB, fever, chills, or new skin lesions. He reports not being in any pain or experiencing any discomfort.

Past Medical and Psychiatric History

Dyslipidemia
Malignant melanoma of back
Diabetes mellitus
Cerebrovascular accident
Hypertensive disorder

Surgical History

Tonsillectomy
Embolization of the Kidney
Wide excision of melanoma on back with sentinel node biopsy on right axilla with gamma probe - 08 APR 2015

Medications

Atorvastatin
Gliburide
Metformin
Dypyrimadole
Lisinopril
Aspirin
Hydrochlorothiazide

Allergies

Penicillin - see modify comment

Social History

Denies: Alcohol Use, Tobacco abuse, Drug abuse

Family History

Parents
Father Deceased
Father Deceased Myocardial infarction @ 73
Mother Deceased Complication of procedure @ 75
Complication from orthopedic hip surgery

PE - HEENT

PE - Head

Negative For: Facial swelling, Facial grimacing, Ptosis of eyelid, Paralysis, Traumatic AND/OR non-traumatic injury

PE - Eyes

Bilateral Pupils equal, Pupils accommodating
Positive For: Eye movements normal, Bilateral Pupil round, Pupil reactive to light.
Negative For: Conjunctival discharge, Conjunctival hemorrhage, Conjunctival Erythema, Conjunctival Injection, Conjunctival edema, Exudate

PE - Ears

Negative For: Bloody discharge, External drainage

PE - Nose

Negative For: Epistaxis, External drainage

PE - Neck

Supple
Positive For: Symmetry.
Negative For: Tenderness, Swelling

PE - Respiratory

No adventitious sounds, Symmetry of chest movement
Positive For: Normal breath sounds - clear and equal.
Negative For: Chest pain on breathing, Expiratory wheezing, Inspiratory wheezing, Tachypnea, Rales, Rhonchi, SOB - Shortness of breath, Wheezing

PE - Cardiovascular

Regular, Heart sounds (S1 and S2 can be appreciated on auscultation)
Negative For: Heart murmur, Gallop, Irregular pulse, Bradycardia, Tachycardia

PE - Abdomen

bowel sounds normal, Soft (Soft)
Positive For: Obese.
Negative For: Abdominal mass, Distention, Tenderness

PE - Peripheral Vascular

Pulse (2/4 in all extremities), Warm skin
Negative For: Cold extremities, Edema of the upper extremity, Peripheral cyanosis, Edema of lower extremity

Other Results

EKG 12 Lead (05/20/2015): outstanding
CXR (05/20/2015): outstanding

PET/CT (4/10/2015):
1. Mild hypermetabolic activity seen at the surgical bed of the right back which is nonspecific and continued follow-up is recommended.

2. Additional area of hypermetabolic activity noted within the right axillary region which is likely inflammatory in this postoperative patient.

HPI: 60 yo male inmate here for f/u bx proven malignant melanoma (4.5 x 2.5 cm) right upperback s/p wide local excision and sentinel LN bx. Pt also has hx of stroke. Pt is followed by Dr. Dominguez (Hematology), Surgery Dr. KILIDDJIAN, and Neurology Dr. Deochand.

O: Right upper back and right axilla surgical incisions well healed with minimal erythema. No sign of infection or recurrence. Right axilla 2cm lymphadenopathy

LABS
Pathology
A AXILLARY LYMPH NODE, RIGHT, TISSUE 1: - ONE LYMPH NODE, NEGATIVE FOR METASTATIC MELANOMA (0/1). - IMMUNOHISTOCHEMICAL STAINS FOR S-100 AND MELAN-A ARE NEGATIVE.

B AXILLARY LYMPH NODE, RIGHT, TISSUE 2: - METASTATIC MELANOMA TO ONE (1) LYMPH NODE, (1/1). - IMMUNOHISTOCHEMICAL STAINS FOR S-100 AND MELAN-A ARE POSITIVE.

C BACK MELANOMA, RIGHT UPPER, TISSUE: - FOCALLY ULCERATED SKIN WITH ACUTE AND CHRONIC INFLAMMATION, EDEMA AND PURULENT EXUDATE CONSISTENT WITH PREVIOUS BIOPSY SITE. - NO EVIDENCE OF RESIDUAL MELANOMA IDENTIFIED. - RESECTION MARGINS ARE NEGATIVE.

Full body PET CT

1. MILD HYPERMETABOLIC ACTIVITY SEEN AT THE SURGICAL BED OF THE RIGHT BACK

- WHICH IS NONSPECIFIC AND CONTINUED FOLLOW-UP IS RECOMMENDED.

- 2. ADDITIONAL AREA OF HYPERMETABOLIC ACTIVITY NOTED WITHIN THE RIGHT AXILL

ARY REGION WHICH IS LIKELY INFLAMMATORY IN THIS POSTOPERATIVE PATIENT. HOWEVER, CONTINUED FOLLOW-UP IS RECOMMENDED.

Assessment / Plan

1. Biopsy proven malignant melanoma right upper back s/p surgical excision
-Completely excised
-No sign of recurrence
-Pt needs to follow up with Dermatology every month for skin exam

2. Biopsy proven metastatic malignant melanoma right axillary lymph node
- pt needs axillary lymph node dissection with Dr. Killijian
- pt needs to follow up with Dr. Dominguez for systemic interferon or monoclonal antibody regimen

3. Hx of stroke
-Follow up with Dr. Deochand
-Pt is scheduled for MRI

Patient seen and examined with Dr. Ricotti who agrees with assessment and plan

INFECTIOUS DISEASE CONSULT

DOS: 08/03/2016

CBC shows a white blood count of 13, hemoglobin 8, hematocrit of 25 with a platelet count of 292.

RADIOLOGY: Chest x-ray was performed shows no effusions, no consolidations.

IMPRESSION:
1. Bacteremia, secondary to gram-positive cocci.
2. Leukocytosis secondary to #1.
3. Anemia.
4. Atrial fibrillation.

PLAN: I went ahead and spoke to Dr. Michel. I probably would go ahead and get a TEE on this patient at this point in time.

My concern and I will go ahead and address this should I change this patient from vancomycin to daptomycin seeing this patient has hardware.

We will also discuss the possibility of transferring this patient back to his original place of surgery. We will follow up with Dr. Michel.

JOHN DYLEWSKI, M.D.

CONSULT

DOS: 08/03/2016

REFERRING PHYSICIAN: George Michel, M.D.

CLINICAL INFORMATION: The patient is a 62-year-old white prisoner who was admitted on 07/26/2016 with shortness of breath and dizziness. The patient has a history of recent aortic valve replacement. He now has been placed on telemetry ward where sinus rhythm has been documented. The patient has increasing murmur, which was found on physical exam. In addition, he had a cerebrovascular accident on left side with weakness six years ago. He has been unable to get out of bed due to significant weakness at Rehab. He has been having chills and generalized weakness and shakes. He is subsequently admitted to the hospital for further evaluation. I have been asked to evaluate patient with regard to performing a transesophageal echocardiogram to evaluate valve function.

On further questioning, patient has had no fever, but chills has been noted. He has dyspnea on exertion, shortness of breath with activities of daily living, generalized weakness, shakes and palpitations and shortness of breath. There has been some weakness _____ treated. The patient has not been able to ambulate very far in his wheelchair. He has no gastrologic or urological symptomatology. There is no syncope. No visual changes or auditory changes. The patient has significant fatigue.

PAST MEDICAL HISTORY: Includes melanoma, right axillary lymph node dissection on May 21, 2015, diabetes mellitus, adult onset; dysmetabolic syndrome, morbid obesity, hypertension, cerebrovascular accident with MRI on 12/2010 with an acute ischemic infarct with right posterior parietal white matter changes.
No hemorrhage. Allergic rhinitis, sciatica trigger finger, elevated PSA, cardiac arrhythmia, bradyarrhythmia, low back pain. He has been chronic, valve heart disease, aortic valve.

PAST SURGICAL HISTORY: There is also history of anemia of chronic disease, coronary artery disease, cerebrovascular accident left side six years ago.

PAST SOCIAL HISTORY: Recent valve surgery.

JOHN DYLEWSKI, M.D.

CONSULT

DOS: 08/03/2016

PHYSICAL EXAMINATION:
VITAL SIGNS: Blood pressure 90s-100s/60s. Pulse 70. Respiratory rate 16. Temperature afebrile.
GENERAL: Pleasant obese, white gentleman, lying in bed, no distress.
HEENT: Head: Normocephalic, atraumatic.
NECK: Supple. There is no JVD.
CARDIAC: Regular rate and rhythm, there is a 3/6 murmur heard best at the right upper sternal border.
LUNGS: Bilateral breath sounds are clear to auscultation.
ABDOMEN: Soft, obese, nontender, nondistended.
EXTREMITIES: No clubbing or cyanosis. There is no evidence of lower extremity edema. There are palpable pulses bilaterally.
NEUROLOGIC: Oriented to person, place and time. He has some mild resting tremor.
CHEST: There is a sternal incision, which is closed. No evidence of infections.

DATABASE: Telemetry monitor reveals normal sinus rhythm. EKG reveals normal sinus rhythm, normal PR, QS, and QT interval. Nonspecific ST-T wave changes across the precordium, somewhat low forces also.

ASSESSMENT: This is a 63-year-old gentleman who presents status post valve placement, now with fatigue, shortness of breath, weakness. A transesophageal echocardiogram was requested for further evaluation of his aortic valve.

CONSULT

DOS: 08/03/2016

RECOMMENDATIONS: I have discussed at length with the patient the procedure of transesophageal echocardiogram and its risks and benefits. The patient has voiced understanding of the above and agreed to the above plan. Further recommendation is forthcoming following the transesophageal echocardiogram.

Thank you, for allowing me to participate in the care of your patient.

Chief Complaint

Decompensated Cardiac/ dizziness / SOB

Last known as asymptomatic

Patient last asymptomatic (Date/Time) Jul-26-2016 @ 0000

HPI / Subjective

62 yo male presented to LCH from federal prison complaining of dizziness and shortness of breath. Pt is s/p coronary bypass/aortic valve replacement 6/2015 and has a recent admission to LCH for cardiac rehab. Why admitted on last visit pt had some complaints of dizziness when rising from toilet and sob due to "room being too hot". Cardiac enzymes were drawn on two separate occasions on previous admission and were negative. There were no acute findings on any other cardiac workup. Pt was discharged 7/25.

Pt was brought back to LCH due to dizziness and SOB after walking and getting up. Per Pt, he feels it is that his Hg is too low. Pt denies chest pain, diaphoresis, abdominal pain

HPI / Subjective

62 yo male presented to LCH from federal prison complaining of dizziness and shortness of breath. Pt is s/p coronary bypass/aortic valve replacement 6/2016 and has a recent admission to LCH for cardiac rehab. During last admission pt had some complaints of dizziness when rising from toilet and sob due to "room being too hot". Cardiac enzymes were drawn on two separate occasions on previous admission and were negative. There were no acute findings on any other cardiac workup. Pt was discharged 7/25/2016. Patient has returned to LCH due to dizziness and dyspnea after walking and getting up.

Today the patient was seen and examined at bedside by attending, resident and medical students. He states he is feeling better and no longer has SOB or dizzy. He reports feeling generalized weakness. He denies CP/SOB/N/V/D.

Objective

Physical Exam

Assessments

Dyspnea
Dizziness
Weakness present
Acute injury of kidney
Normocytic anemia
Paroxysmal atrial fibrillation
Diabetes mellitus
Hypokalemia

Plan

1.Generalized weakness
-most likely secondary to chronic deconditioning after recent CABGx1 and aortic valve replacement vs. orthostatic hypotension. Infection is unlikely
-Trop x 2 negative
-CXR: no acute cardiopulmonary
-ordered orthostatics
-continue to trend H/H (hbg 10.2 at prior admission to 9.4 this am)
-Consulted cardiology
-ordered EKG
-ordered echo
-continue to monitor on tele
-continue PT/OT

2. AKI
-7/26/16 BUN 28, Creatinine 1.6, 7/27/16 BUN 25 and Creatinine 1.49.
- Started NS at 100mL/h w/ 20meq K
-Will re-evaluate CBC and BMP in the morning.

3. Normocytic anemia
-likely secondary to chronic disease
-Hb 9.4 with MCV 84.7. At previous admission Hb 10.2
-Continue ferrous sulfate 325mg tab PO daily
-Continue to monitor daily. Pt denies any active bleeding.

4. Paroxysmal Afib
- pt had only one episode of afib s/p CABG
-EKG :
-CHADSVASC: 4
-Continue home medication of amiodarone 200 mg daily
-Per cardiology recs at previous admission, continue ASA

5. Diabetes Mellitus (improved control)
-Accucheck ACHS
-Glucose 184 at admission
-Continue Levemir 34 units
-Novolog R 20 units TID
-Continue Novolin R on moderate SS
-Continue strict monitoring of Glucose

CONSULT

DOS: 07/28/2016

CHIEF COMPLAINT/REASON FOR CONSULTATION: Shortness of breath, chronic atrial fibrillation, hypokalemia.

HISTORY OF PRESENT ILLNESS: This is a 62-year-old male with multiple medical problems admitted to telemetry because of shortness of breath. He had an echo done yesterday and we were called in consultation for evaluation. The patient has been consistently hypokalemic. He is not on any diuretics. He was found sitting up on a recliner. He is complaining of dyspnea with minimal exertion. There are two correctional officers at bed site.

PAST MEDICAL HISTORY: Dyslipidemia, malignant melanoma of the back, diabetes, cerebrovascular accident, hypertension, coronary artery disease.

PAST SURGICAL HISTORY: Replacement of aortic valve in 2016, coronary artery bypass graft in 2016, coronary artery bypass graft and aortic valve replacement in June 2016 at University of Miami Hospital.

ALLERGIES: Penicillin.

REVIEW OF SYSTEMS:
Constitutional: Agrees to fatigue, malaise, weakness, shortness of breath. Denies chest, palpitations, positive orthopnea. Positive dyspnea with minimal exertion.

Electronically Signed By: VIERA OELSNER ARNP 2016-08-05 02:17:05

BOP FOIA 2016-07384

Larkin Community Hospital
7031 SW 62nd Avenue
South Miami, Florida 33143

PEARLMAN, LOUIS J
MRN: 309861
ACCT: 745421

OELSNER VIERA, ARNP

CONSULT

DOS: 07/28/2016

OBJECTIVE: Vital signs: Blood pressure 130/67, heart rate 72, respiration rate 19, temperature 98.7.

LABS: Glucose 134, BUN 24, creatinine 1.54, sodium 131, potassium 3.1, chloride 97, CO2 25. WBC 9.9, hemoglobin 9.2, hematocrit 26, platelet count 249.

Diagnostic chest x-rays shows no acute cardiopulmonary process. A cardiac silhouette is within normal limits. 2D echo that was done yesterday shows, due to poor quality of the echocardiogram the left ventricular ejection fraction cannot be assessed. The left ventricular ejection fraction is estimated to be 50%. Regional wall motion is now well-visualized. Mild diastolic dysfunction is present. Aortic valve is now well visualized. Aortic valve is replaced. The patient has severe aortic stenosis.

PHYSICAL EXAM:
GENERAL: Obese ill-looking male. Calm. No distress noted.
HEENT: Eyes: Pupils are equal, round, reactive to light. Nose: No epistaxis noted.
NECK: Supple. No JVD.
HEART: S1, S2, irregular rhythm.
LUNGS: Diminished breath sounds in bilateral lower lobes. No rales. No wheezing.
ABDOMEN: Bowel sounds x4. Soft, nontender, nondistended.
EXTREMITIES: Positive distal pulses. No edema noted.

ASSESSMENT: Chronic post CABG atrial fibrillation, mixed systolic and diastolic heart failure, severe aortic stenosis, hypokalemia.

PLAN: We are going to continue with current treatment. Low dose beta-blockers, low dose calcium channel blockers, aspirin and amiodarone. This patient is with severe symptomatic aortic stenosis, diuretics will reduce preload, on which the patient may depend for maintenance of cardiac output. Therefore, diuretics should be used with caution and we are now recommending them at this time. The patient is not exhibiting any signs of fluid overload

62 yo male presented to LCH from federal prison complaining of dizziness and shortness of breath. Pt is s/p coronary bypass/aortic valve replacement 6/2015 and has a recent admission to LCH for cardiac rehab. During last admission pt had some complaints of dizziness when rising from toilet and sob due to "room being too hot". Cardiac enzymes were drawn on two separate occasions on previous admission and were negative. There were no acute findings on any other cardiac workup. Pt was discharged 7/25/2016. Patient has returned to LCH due to dizziness and dyspnea after walking and getting up.

Today the patient was seen and examined at bedside by attending, resident and medical students in NAD. He reports feeling generalized weakness from lack of rest. He states that he has trouble sleeping at night d/t disruptions, but he was able to rest and sleep this morning. Pt denied feeling depressed, having change in appetite, or decreased interest in activities. He endorsed bilateral shoulder pain and stiffness that he attributed to laying in bed. He stated that pain is intermittent, independent of time, and started roughly 2 weeks ago. He described the pain as sharp and non-radiating when he first starts to move the shoulders. Pt rated the pain at 0/10 while laying still and 5/10 when he moves, but he is able to "work through it." He denied having recent Headache, dizziness, or CP/SOB/N/V/D today.

-continue PT/OT

2. AKI
-7/28/16 BUN 28, Creatinine 1.8, 7/28/16 BUN 19 and Creatinine 1.18.
- Started NS at 100mL/h w/ 20meq K
-Will re-evaluate CBC and BMP in the morning.

3. Normocytic anemia
-likely secondary to chronic disease
-Hb 10.4 with MCV 84.3 (07/28/2016) At previous admission Hb 10.2
-Continue ferrous sulfate 325mg tab PO daily
-Continue to monitor daily. Pt denies any active bleeding.

4. Paroxysmal Afib
- pt had only one episode of afib s/p CABG
-EKG :
-CHADSVASC: 4
-Continue home medication of amiodarone 200 mg daily
-Per cardiology recs at previous admission, continue ASA

5. Diabetes Mellitus (improved control)
-Accucheck ACHS
-Glucose 184 at admission
-Continue Levemir 34 units
-Novolog R 20 units TID
-Continue Novolin R on moderate SS
-Continue strict monitoring of Glucose

History/HPI

62 yo male presented to LCH from federal prison complaining of dizziness and shortness of breath. Pt is s/p coronary bypass/aortic valve replacement 6/2015 and has a recent admission to LCH for cardiac rehab. Pt was brought back to LCH due to dizziness and SOB after walking and getting up.

The patient was seen and examined at bedside by medical resident in NAD, AAO x3, stable and cooperative w/ exam. He reported feeling well rested. Pt denies fever, dizziness, CP, SOB, N/V/D/C, urinary or intestinal issues. Patient is cleared for discharge from family medicine standpoint this AM.

Physical Exam

Patient resting comfortably in bed in NAD

PE - General

Appearance consistent with age(Appearance consistent with age), Awake, Alert, Oriented to time, Oriented to place (finding), Oriented to person, Well nourished (Well nourished)

PROGRESS NOTE

DOS: 07/30/2016

SUBJECTIVE: The patient is found in bed, awake, alert, calm. Potassium is normal again today. He continues with mild shortness of breath on exertion. He is being followed by the Family Medicine team.

OBJECTIVE: Vital signs: Blood pressure 124/60, heart rate _____, respiratory rate 18, temperature 98.6.

LABS: Glucose 134, BUN 24, creatinine 1.54, sodium 131, potassium 3.5, chloride 97, CO2 25, WBC 9.9, hemoglobin 9.2, hematocrit 26, platelet count 249.

PHYSICAL EXAM:
GENERAL: Pale, ill-looking male, generally ill.
HEENT: Eyes: Pupils are equal, round and reactive to light. Nose: No epistaxis noted.
NECK: Supple. No JVD.
HEART: S1, S2, regular rhythm. Positive 2/6 systolic murmur.
LUNGS: Diminished breath sounds in bilateral lower lobes. Even and unlabored breathing.
ABDOMEN: Bowel sounds x4. Soft, nontender, nondistended.
EXTREMITIES: Positive distal pulses. No edema noted.

ASSESSMENT: Shortness of breath, combined, heart failure, paroxysmal atrial fibrillation, severe aortic stenosis.

PLAN: We will continue treatment and monitor labs. We will continue to monitor his cardiovascular status. Case discussed with the staff.

OELSNER VIERA, ARNP

CONSULT

DOS: 07/28/2016

CHIEF COMPLAINT/REASON FOR CONSULTATION: Shortness of breath, chronic atrial fibrillation, hypokalemia.

HISTORY OF PRESENT ILLNESS: This is a 62-year-old male with multiple medical problems admitted to telemetry because of shortness of breath. He had an echo done yesterday and we were called in consultation for evaluation. The patient has been consistently hypokalemic. He is not on any diuretics. He was found sitting up on a recliner. He is complaining of dyspnea with minimal exertion. There are two correctional officers at bed site.

PAST MEDICAL HISTORY: Dyslipidemia, malignant melanoma of the back, diabetes, cerebrovascular accident, hypertension, coronary artery disease.

PAST SURGICAL HISTORY: Replacement of aortic valve in 2016, coronary artery bypass graft in 2016, coronary artery bypass graft and aortic valve replacement in June 2016 at University of Miami Hospital.

ALLERGIES: Penicillin.

REVIEW OF SYSTEMS:
Constitutional: Agrees to fatigue, malaise, weakness, shortness of breath. Denies chest, palpitations, positive orthopnea. Positive dyspnea with minimal exertion.

Electronically Signed By: VIERA OELSNER ARNP 2016-08-05 07:17:05

Larkin Community Hospital
7031 SW 62nd Avenue
South Miami, Florida 33143

PEARLMAN, LOUIS J
MRN: 309861
ACCT: 745421

OELSNER VIERA, ARNP

CONSULT

DOS: 07/28/2016

OBJECTIVE: Vital signs: Blood pressure 130/67, heart rate 72, respiration rate 19, temperature 99.7.

LABS: Glucose 134, BUN 24, creatinine 1.54, sodium 131, potassium 3.1, chloride 97, CO2 25. WBC 9.9, hemoglobin 9.2, hematocrit 26, platelet count 249.

Diagnostic chest x-rays shows no acute cardiopulmonary process. A cardiac silhouette is within normal limits. 2D echo that was done yesterday shows, due to poor quality of the echocardiogram the left ventricular ejection fraction cannot be assessed. The left ventricular ejection fraction is estimated to be 50%. Regional wall motion is now well-visualized. Mild diastolic dysfunction is present. Aortic valve is now well visualized. Aortic valve is replaced. The patient has severe aortic stenosis.

PHYSICAL EXAM:
GENERAL: Obese ill-looking male. Calm. No distress noted.
HEENT: Eyes: Pupils are equal, round, reactive to light. Nose: No epistaxis noted.
NECK: Supple. No JVD.
HEART: S1, S2, irregular rhythm.
LUNGS: Diminished breath sounds in bilateral lower lobes. No rales. No wheezing.
ABDOMEN: Bowel sounds x4. Soft, nontender, nondistended.
EXTREMITIES: Positive distal pulses. No edema noted.

ASSESSMENT: Chronic post CABG atrial fibrillation, mixed systolic and diastolic heart failure, severe aortic stenosis, hypokalemia.

PLAN: We are going to continue with current treatment. Low dose beta-blockers, low dose calcium channel blockers, aspirin and amiodarone. This patient is with severe symptomatic aortic stenosis, diuretics will reduce preload, on which the patient may depend for maintenance of cardiac output. Therefore, diuretics should be used with caution and we are now recommending them at this time. The patient is not exhibiting any signs of fluid

DATE & TIME	
8/12/2016	UM CCU PROGRESS NOTE
7:15 AM	Pearlman, Louis

DATE OF ADMISSION: 8/10/2016
ATTENDING: Dr. Robert Hendel
CHIEF COMPLAINT:
Endocarditis
ID: 62 yo M with PMH of CVA (residual left facial droop), paroxysmal atrial fib, severe AS s/p valve replacement, CAD (anomalous right coronary from left sinus of valsalva) s/p CABGx1 (aorta to posterior descending), HTN, DM who underwent CABGx1 and AVR (23 mm bovine bioprosthesis) on 06/15 and now presents with mitral valve endocarditis with concern for possible perivalvular abscess.
SUBJECTIVE:
Patient was unable to be transferred to JMH yesterday for potential surgery due to administrative issues. Patient was seen by ENT due to dysphagia. Patient has R vocal cord paralysis. Febrile yesterday. Afebrile this morning after receiving Tylenol. Patient seen this morning. He is on bipapintermittent bipap. He stated that he wants to be transferred in order to have surgery.
OBJECTIVE:
Vitals Last 24 hours and Most Recent in Parenthesis
Temp 100.5 (0000, afebrile since)
RR 15-30 (22)
HR 84-120 (87)
NIBP 112-119/59-80 (114/59)
A line 105-145/46-65 (121/59)
MAP 63-98 (74)
CVP 6-18 (14)
O2sat 90-100 (100)

General: NAD, oriented x3
Pulm: On bipap, decreased breath sounds throughout
Cardiac: RRR, Grade III/VI pansystolic murmur that radiates to the back
Abd: bowel sounds present, soft, nontender, nondistended
Extremities: 2+ bilateral pulses, no edema
Skin: no Janeway lesions or splinter hemorrhages

Labs/Imaging:
ABG 0600: 7.45/35/152/24
18.9> 8.4/25.5 < 260
139/3.8/98/24/49/3.17 <183
Ca 8.7 Mg 2.3
Tprot 5.6 Alb 2.5 Tbili 1.3
AST 21 ALT 14 ALP 77
Gentamycin 1
Lactic acid 1

Assessment: 62 yo M with PMH of CVA (residual left facial droop), paroxysmal atrial fib, severe AS s/p valve replacement, CAD (anomalous right coronary from left sinus of valsalva) s/p CABGx1 (aorta to posterior descending), HTN, DM who underwent CABGx1 and AVR (23 mm bovine bioprosthesis) on 06/15 and now presents with mitral valve endocarditis with concern for possible perivalvular abscess.

Neuro:
-orientedx3, no focal deficits

BOP FOIA 2016-07384

DATE & TIME	
8/12/2016	UM CCU PROGRESS NOTE
7:15 AM	Pearlman, Louis

-consider CT scan for septic emboli if patient has acute change in mentation

Pulm:
-Patient has require intermittent use of bipap. He is currently on bipap. Most likely due to fluid overload from MR.
-C/w Diuresis as needed
-Continuous pulse ox and serial ABGs to assess respiratory status

Cardio:
#Endocarditis
-Blood cultures positive for coag negative staph at Larkin. Blood cultures positive for staph lungdenesis again here. Also positive for alloiococcus otis. F/u repeat blood cultures
- TEE shows aortic root abscess, vegetation on the mitral valve, and perforation of mitral valve
-Per ID:
-continue rifampin 300mg q8h
-Decrease daptomycin to 875 q48h
-Follow gentamycin level. Only order daily dose if level is <2. Yesterday level of 3 so held
-F/u HIV testing
-poor prognosis due to involvement of aortic root and perforation of valve ; transfer patient to Jackson to undergo surgery by Dr. [illegible]
-Continue to trend lactic acid, WBC

#HFpEF 2/2 to Mitral Valve Regurgitation
-Continue w/w diuresis at this time
-Afterload reduction with hydralazine 25 mg po tid
-Transfer for surgery

#HTN,
-C/w hydralazine 25 mg tid. Will attempt to increase for afterload reduction as bp tolerates
-Discontinue amlodipine and losartan due to AKI

#Atrial Fibrillation with CHADS2VASC Score of 4
-Continue amiodarone
-Not anticoagulating at this time due to plan for surgery and higher risk of septic emboli. Recent TEE showed no cardiac thrombus

#Hx of 2nd degree Type I and Junctional Rhythm
-2/2 to aortic root abscess
-followed by EP, patient is not currently having this at this time

Renal:
#AKI
-Consider cardiorenal vs gentamycin toxicity
-Adjustment to antibiotics as listed above. Following gentamycin level carefully
-Giving Lasix as appears to have cardiorenal element

Endocrine:

BOP FOIA 2016-07384

DATE & TIME	
8/12/2016	UM CCU PROGRESS NOTE
7:15 AM	Pearlman, Louis

-history of DM, glucose sticks reveal uncontrolled DM
-C/w detemir 20 mg IV bid, sliding scale to moderate
-Not giving prandial insulin due to reported poor po intake
-Reassess today and adjust insulin as appropriate

DVT prophylaxis:
-continue heparin 5000u subq bid
Diet: Cardiac
FULL CODE
Disposition: Transfer to JMH for definitive surgery by Dr. Loebe
Patient will be seen and discussed with the Attending Physician, Robert Hendel, MD. He agrees with the above assessment and recommendations except as documented below.

Harold Rivner, MD (PGY-2)
Resident Physician

Cardiology Attending: HENDEL
Date: 8/12/16
Time Interval: 830 - 905

I have seen and evaluated patient with the medicine resident and/or cardiology fellow, and performed a history and physical exam. I agree with the resident's findings and plan of care, as documented 8/12/16 and amended. The patient is critically ill and requires critical care for the following reason: continuous glucose to endocarditis.

Key factors and additional information:
Developed VT to 2 runs. Pt awake + alert, plans adjustment
Defibrillator Friday, surgery to be with Dr Loebe & Anesthesia surgery
by this is an option. JMH has devices, trauma, but Dr
Loebe is willing to accept pt at the surgery.
Has had poor adherence. Pharm has been working with.

Ron Hendel

UM CCU ADMISSION NOTE
Pearlman, Louis

Date of Admission: 08/09/2016

Chief Complaint:
Endocarditis

ID/HPI:
62 yo M with PMH of CVA, paroxysmal atrial fib, severe AS s/p valve replacement, Anomalous right coronary from left sinus of valsalva s/p CABGx1 (aorta to posterior descending), HTN, DM II who underwent CABGx1 and AVR (23 mm bovine bioprosthesis) on 06/15. In the postop period, he experienced atrial fibrillation and hypertension. Chemical cardioversion was unsuccessfully attempted with amiodarone. He was transferred to Larkin Hospital then to a correctional facility. He then developed SOB and was found to have positive blood cultures at Larkin. A TEE revealed aortic and mitral endocarditis; blood cultures were positive for staph lugdunensis (coag negative staph). He was transferred to UMH for treatment. He is receiving rifampin 300mg q8h, daptomycin 875mg q24h and gentamicin 125mg q24h. During this hospitalization, EP was consulted regarding 2nd degree Type I AV block and junctional rhythm. There was concern for perivalvular abscess as a cause of the block. Patient was on amiodarone and metoprolol succinate; metoprolol has been held. He was evaluated by Dr. Williams regarding his endocarditis; he did not believe patient is a surgical candidate at this time. Upon interview, patient is drowsy and obtunded. He is however, oriented to person, place and time and answers questions appropriately. He denies chest pain, palpitations, fevers, chills, headaches, shortness of breath, abdominal pain, nausea and vomiting. He reports worsening fatigue and thirst.

ROS: as stated in HPI, otherwise negative

HOME MEDICATIONS:
Protonix 40 mg.
Tylenol 650.
Metoprolol 25.
Norvasc 5 mg.
Levemir Insulin.
Cozaar 50.
Amiodarone 200

ALLERGIES: Penicillin

PAST MEDICAL HISTORY:
HTN
Anomalous right coronary from left sinus of valsalva s/p CABGx1
AS
Obesity
DM II (HbA1c 7.7 07/2016)

Pearlman, Louis

PAST SURGICAL HISTORY:
CABGx1
AVR
Melanoma resection

FAMILY HISTORY: noncontributory

SOCIAL HISTORY:
Patient is a federal prisoner who reports social use of alcohol. He denies use of cigarettes and illicit drugs.

Physical Examination:
Vitals: Temp 99.2 HR 97 RR 25 BP 140/73 O2sat 99

General: NAD, drowsy, oriented x3
HEENT: PEERL, EOMI, mild left facial droop, CN otherwise intact, dry mucosa
Pulm: CTAB
Cardiac: RRR, Grade III/VI pansystolic descrendo murmur heard throughout anterior chest with radiation to the back, no palpable thrill
Abd: bowel sounds present, soft, nontender, nondistended
Extremities: 2+ bilateral pulses, no edema
Skin: no janeway lesions or splinter hemorrhages

Labs/Imaging:
CBC:
13> 9/25.9 <306
136/3.6/99/24/20/1.08 <200
Ca 8 Ionized pending
Tprot 5.3 Alb 2.4 Tbili 2.7 Dbili 1.2
AST 22 ALT 18
Gentamicin 2
Glucose 08/08 0710 228
1052 182
1630 246
2215 215
08/09 1130 173

Blood cultures positive for staph lugdunensis
08/08 EKG: Nonspecific intraventricular conduction delay, Nonspecific T wave abnormality, Prolonged QT

08/06 ECHO: There is moderate concentric left ventricular hypertrophy.
Left ventricular systolic function is normal.
Ejection Fraction = 60-65%.
E/E' 15-20 cm/sec is suggestive of elevated left ventricular end diastolic pressure

BOP FOIA 2016-07384

Date and Time
8/9/2016
14:00

UM CCU ADMISSION NOTE
Pearlman, Louis

There is a bioprosthetic aortic valve.
The prosthetic aortic valve appears to open well.
The gradient is normal for this prosthetic aortic valve.
There is moderate mitral annular calcification.
There is mild mitral regurgitation.
Right ventricular systolic pressure is elevated at 46 - 50 mmHg.
There is no pericardial effusion

Prelim TEE: vegetation on native anterior leaflet of the mitral valve, no vegetations noted on aortic valve, aortic root abscess, perforation of anterior leaflet of mitral valve

A/P:
62 yo M with PMH of CVA (residual left facial droop), paroxysmal atrial fib, severe AS s/p valve replacement, CAD (anomalous right coronary from left sinus of valsalva) s/p CABGx1 (aorta to posterior descending), HTN, DM who underwent CABGx1 and AVR (23 mm bovine bioprosthesis) on 06/15 and now presents with mitral valve endocarditis with concern for possible perivalvular abscess.

Neuro:
-orientedx3, appropriate affect, no focal deficits
-lethargy may be secondary to sedation for TEE
-consider CT scan for septic emboli if patient has acute change in mentation

Cardio:
#Endocarditis
-Blood cultures positive for coag negative staph at Larkin. Prelim positive here now for GPC
-definitive vegetation on native mitral valve, concern for involvement of prosthetic valve continue rifampin x6 weeks, gentamicin x2 weeks and daptomycin x6 weeks. Due to proximity of bioprosthetic aortic valve, this regimen would also treat prosthetic valve endocarditis.
-per CT surgery, no surgical treatment at the moment
-poor prognosis due to involvement of aortic root and perforation of valve

#HTN
-continue losartan 50mg, amlodipine 5mg

#Atrial Fibrillation with CHADS2VASC Score of 4
-On amiodarone
-Will consider restarting heparin drip

#Hx of 2nd degree Type I and Juctional Rhythm
-Not currently in this since stopping metoprolol
-Consider to monitor
-EPS following case

Date and Time
8/9/2016
14:00

UM CCU ADMISSION NOTE
Pearlman, Louis

Pulm:
-Patient is saturating appropriately on room air, experiencing no difficulties with respiration

Renal:
-BUN, Cr at baseline

Endocrine:
-history of DM, glucose sticks reveal uncontrolled DM
-receiving detemir 34 units qhs and mild ISS (2 u aspart)
-patient was NPO today for TEE, reassess when ingesting adequate PO and adjust insulin as appropriate

DVT prophylaxis:
-heparin 5000u subq bid

Disposition: Admit to CCU. Possible transfer to the floor in AM
FULL CODE

The above patient will be presented to the attending on rounds in the morning.

Exam Comments

A1c 8.6

Comments

MRI- Brain

1. Involutional change and evidence of chronic microvascular disease with old infarcts as described.
2. Abnormal T2 and FLAIR signal hyperintensity within the periventricular white matter. Considerations would include a demyelinating process, the sequela of chronic microvascular change, or less likely a post inflammatory process. Please correlate with neurological exam.
3. Follow-up is recommended.

ASSESSMENT:

Cerebrovascular disease NOS, 437.9 - Current, Chronic, Not Improved/Same

Patient: PEARLMAN, LOUIS
Patient ID: FCI-02775-093
Date of Exam: Mar 31,2016 10:47
Study Description: MRI BRAIN W/DYE

Date of Birth: Jun 19,1954
Sex: M
Referring Physician: MARTHA CHIPI MD
Interpreting Physician: Modesto Sanchez Torres M.D. Board Certified Radiologist

OBSERVATION

MRI OF THE BRAIN WITH AND WITHOUT CONTRAST:

TECHNIQUE: MULTIPLANAR, MULTISEQUENCE MR IMAGING WAS OBTAINED THROUGH THE BRAIN WITH AND WITHOUT CONTRAST.

FINDINGS:

THERE IS CEREBRAL ATROPHY. NO SUPRASELLAR MASSES. BORDERLINE TO MILD CEREBELLAR ECTOPIA. CHRONIC CHANGE IN THE SINUSES WITH MUCOUS RETENTION CYSTS AND/OR POLYPS. CERVICAL LYMPH NODES ARE IDENTIFIED. THERE IS PROMINENCE OF THE RETROPHARYNGEAL SOFT TISSUES WITH EFFACEMENT OF THE AIRWAY. NO MIDLINE SHIFT OR MASS EFFECT. THE LATERAL VENTRICLES ARE DILATED, ESPECIALLY THE RIGHT. THE IV VENTRICLE IS INTACT. THE III VENTRICLE IS ALSO DISTENDED/DILATED. THERE ARE MULTIPLE AREAS OF INCREASED SIGNAL WHICH ARE LINEAR AND PERPENDICULAR TO THE LATERAL VENTRICLES.

LOW SIGNAL INTENSITY OF THE CALVARIUM MAY BE ON THE BASIS OF RED MARROW RECONVERSION/MARROW INFILTRATIVE PROCESS. THE RIGHT VERTEBRAL ARTERY IS DOMINANT. THE LEFT VERTEBRAL ARTERY IS NOT WELL SEEN. THE BASILAR ARTERY IS SMALL. MULTIFOCAL DARK AREAS ARE SEEN IN THE CEREBELLUM ON THE LEFT WHICH MAY BE ISCHEMIC OR RELATED TO A DEMYELINATING PROCESS. THE MESIAL TEMPORAL CORTICES ARE SYMMETRICAL IN SIZE AND SIGNAL INTENSITY. THERE IS NARROWING AND OPACIFICATION OF THE OSTEOMEATAL COMPLEXES BILATERALLY.

POST-CONTRAST IMAGES DO NOT REVEAL SIGNIFICANT ENHANCEMENT OR MASSES. FATTY LESION IS NOTED IN THE POSTERIOR PARIETAL CALVARIUM ON THE LEFT.

PLAN OF CARE SECTION

PATIENT CARE PLAN

Problem 1: RISK FOR FALLS - MODERATE TO HIGH

Description: RISK FOR FALLS - MODERATE TO HIGH

Goal 1: RISK FOR FALLS WITH INJURY WILL BE REDUCED
Expected Achievement Date: July 27, 2016 12:00:00 AM CDT
Status: active

INSTRUCTION/INTERVENTION	FREQUENCY	ASSIGNED DATE	STARTED DATE	ACHIEVED/DISCONTINUED DATE	STATUS
FREQUENT ROUNDING EVERY 2 HOURS		July 12, 2016 5:20:00 AM CDT	July 12, 2016 5:20:00 AM CDT		active

Problem 2: DIABETES MELLITUS: ALTERED NUTRITION, LESS THAN BODY REQUIRE

Description: DIABETES MELLITUS: ALTERED NUTRITION, LESS THAN BODY REQUIRE

Goal 1: WILL MAINTAIN ADEQUATE NUTRITION FOR BODY REQUIREMENT
Expected Achievement Date: July 27, 2016 12:00:00 AM CDT
Status: active

INSTRUCTION/INTERVENTION	FREQUENCY	ASSIGNED DATE	STARTED DATE	ACHIEVED/DISCONTINUED DATE	STATUS
MONITOR FINGER STICK GLUCOSE AS REQUIRED		July 12, 2016 5:21:00 AM CDT	July 12, 2016 5:21:00 AM CDT		active

Problem 3: PROTOCOL, SKIN CARE

Description: PROTOCOL, SKIN CARE

Goal 1: NURSING STAFF WILL MEET STANDARDS OF SKIN CARE PROTOCOL.
Expected Achievement Date: July 27, 2016 12:00:00 AM CDT
Status: active

INSTRUCTION/INTERVENTION	FREQUENCY	ASSIGNED DATE	STARTED DATE	ACHIEVED/DISCONTINUED DATE	STATUS
SKIN ASSESSED FOR BREAKDOWN		July 12, 2016 3:13:00 PM CDT	July 12, 2016 3:13:00 PM CDT		active

Problem 4: IMPAIRED SKIN INTEGRITY

Description: IMPAIRED SKIN INTEGRITY

Goal 1: WILL DEMONSTRATE PROGRESSIVE HEALING OF WOUND TISSUE
Expected Achievement Date: July 27, 2016 12:00:00 AM CDT
Status: active

INSTRUCTION/INTERVENTION	FREQUENCY	ASSIGNED DATE	STARTED DATE	ACHIEVED/DISCONTINUED DATE	STATUS
UTILIZE PRESSURE REDUCTION MEASURESDEVICES		July 15, 2016 5:43:00 PM CDT	July 15, 2016 5:43:00 PM CDT		active

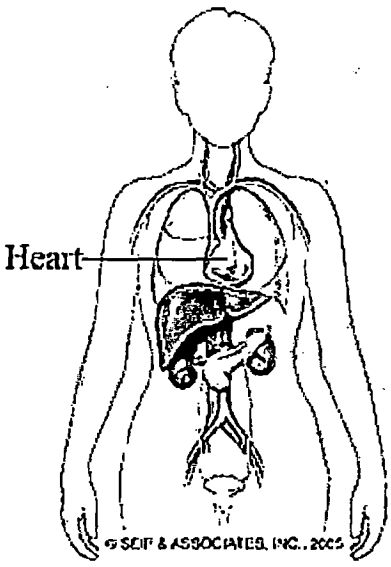
EXITCARE® PATIENT INFORMATION

Patient Name: LOUIS J PEARLMAN
Attending Healthcare Provider: MICHEL GEORGE J

Coronary Artery Bypass Grafting, Care After

These instructions give you information on caring for yourself after your procedure. Your doctor may also give you more specific instructions. Call your doctor if you have any problems or questions after your procedure.



HOME CARE

- Only take medicine as told by your doctor. Take medicines exactly as told. **Do not** stop taking medicines or start any new medicines without talking to your doctor first.
- Take your pulse as told by your doctor.
- Do deep breathing as told by your doctor. Use your breathing device (*incentive spirometer*), if given, to practice deep breathing several times a day. Support your chest with a pillow or your arms when you take deep breaths or cough.
- Keep the area clean, dry, and protected where the surgery cuts (*incisions*) were made. Remove bandages (*dressings*) only as told by your doctor. If strips were applied to surgical area, **do not** take them off. They fall off on their own.
- Check the surgery area daily for puffiness (*swelling*), redness, or leaking fluid.
- If surgery cuts were made in your legs:
  - Avoid crossing your legs.
  - Avoid sitting for long periods of time. Change positions every 30 minutes.
  - Raise your legs when you are sitting. Place them on pillows.
- Wear stockings that help keep blood clots from forming in your legs (*compression stockings*).
- Only take sponge baths until your doctor says it is okay to take showers. Pat the surgery area dry. **Do not** rub the surgery area with a washcloth or towel. **Do not** bathe, swim, or use a hot tub until your doctor says it is okay.
- Eat foods that are high in fiber. These include raw fruits and vegetables, whole grains, beans, and nuts. Choose lean meats. Avoid canned, processed, and fried foods.
- Drink enough fluids to keep your pee (*urine*) clear or pale yellow.
- Weigh yourself every day.
- Rest and limit activity as told by your doctor. You may be told to:
  - Stop any activity if you have chest pain, shortness of breath, changes in heartbeat, or dizziness. Get help right away if this happens.
  - Move around often for short amounts of time or take short walks as told by your doctor. Gradually become more active. You may need help to strengthen your muscles and build endurance.
  - Avoid lifting, pushing, or pulling anything heavier than 10 pounds (4.5 kg) for at least 6 weeks after surgery.
- **Do not** drive until your doctor says it is okay.

 ©2016 ExitCare, LLC BOP FOIA 2016-07384

- Ask your doctor when you can go back to work.
- Ask your doctor when you can begin sexual activity again.
- Follow up with your doctor as told.

GET HELP IF:

- You have puffiness, redness, more pain, or fluid draining from the incision site.
- You have a fever.
- You have puffiness in your ankles or legs.
- You have pain in your legs.
- You gain 2 or more pounds (0.9 kg) a day.
- You feel sick to your stomach (*nauseous*) or throw up (*vomit*).
- You have watery poop (*diarrhea*).

GET HELP RIGHT AWAY IF:

- You have chest pain that goes to your jaw or arms.
- You have shortness of breath.
- You have a fast or irregular heartbeat.
- You notice a "clicking" in your breastbone when you move.
- You have numbness or weakness in your arms or legs.
- You feel dizzy or light-headed.

MAKE SURE YOU:

- Understand these instructions.
- Will watch your condition.
- Will get help right away if you are not doing well or get worse.

Medication Summary / Reconciliation:

Drug Summary Sheet was selected to be printed

The Patient was instructed to take these medications:
NEW: Amiodarone Hydrochloride 200mg Tablet, 200 mg, DAILY, Amount: 0, Refills: 0
NEW: Atorvastatin Calcium 20mg Tablet, 20 mg, AT BEDTIME, Amount: 0, Refills: 0
NEW: Lovenox 40mg/0.4ml Solution for Injection, 40 mg, DAILY, Amount: 0, Refills: 0
NEW: Novolog 100unit/ml Solution for Injection, 20 unt, BEFORE MEALS, Amount: 0, Refills: 0
NEW: Losartan Potassium 25mg Tablet, 50 mg, DAILY, Amount: 0, Refills: 0
NEW: Amlodipine Besylate 5mg Tablet, 5 mg, DAILY, Amount: 0, Refills: 0
NEW: Levemir 100units/ml Solution for Injection, 34 unt, AT BEDTIME, Amount: 0, Refills: 0
NEW: Protonix 40mg Delayed-Release Tablet, 40 mg, BEFORE BREAKFAST, Amount: 0, Refills: 0
NEW: Toprol-XL 25mg Extended-Release Tablet, 25 mg, DAILY, Amount: 0, Refills: 0
NEW: ASPIRIN EC 81 MG 81 MG TBEC, 81 mg, DAILY, Amount: 0, Refills: 0
NEW: GLUCERNA SHAKE LIQD, 1 can, DAILY, Amount: 0, Refills: 0
NEW: Ferrous Sulfate 325mg Tablet, 325 mg, THREE TIMES A DAY, Amount: 0, Refills: 0
NEW: Novolin R 100units/ml Solution for Injection, ss unt, BEFORE MEALS AND AT BEDTIME, Amount: 0, Refills: 0
NEW: Mapap 325mg Tablet, 650 mg, EVERY 6 HOURS AS NEEDED, Amount: 0, Refills: 0

Based on current ExitMeds Drug Interaction settings (Show All Interactions) and information entered into ExitMeds, the following Drug Interactions were found:
1) GLUCERNA SHAKE LIQD is a custom/unknown drug - Unable to check for interactions. Interaction: Unable to check for interactions as this is a Custom/Unknown Drug Custom/Unknown Drug OKed by: Adelaida Alfonso, RN
2) ASPIRIN EC 81 MG 81 MG TBEC is a custom/unknown drug - Unable to check for interactions. Interaction: Unable to check for interactions as

this is a Custom/Unknown Drug Custom/Unknown Drug OKed by: Adelaida Alfonso, RN
3) (Amiodarone Hydrochloride 200mg Tablet) and (Toprol-XL 25mg Extended-Release Tablet) interact. Interaction: Amiodarone Hydrochloride 200mg Tablet (Amiodarone Hydrochloride) has an additive effect with Toprol-XL 25mg Extended-Release Tablet (Metoprolol) The use of these medications together may be contraindicated in a select group of patients. Further therapy and/or an alteration in therapy may be necessary to avoid or limit the potential for interaction. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
4) (Ferrous Sulfate 325mg Tablet) and (Protonix 40mg Delayed-Release Tablet) interact. Interaction: Ferrous Sulfate 325mg Tablet (Iron) have their absorption reduced by Protonix 40mg Delayed-Release Tablet (Proton pump inhibitors) The use of these medications together may be contraindicated in a select group of patients. Further therapy and/or an alteration in therapy may be necessary to avoid or limit the potential for interaction. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
5) (Amlodipine Besylate 5mg Tablet) and (Protonix 40mg Delayed-Release Tablet) interact. Interaction: Amlodipine Besylate 5mg Tablet (Amlodipine) may increase the serum concentration of Protonix 40mg Delayed-Release Tablet (Pantoprazole Sodium) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
6) (Novolog 100unit/ml Solution for Injection) and (Losartan Potassium 25mg Tablet) interact. Interaction: Novolog 100unit/ml Solution for Injection (Insulin) has its effect increased by Losartan Potassium 25mg Tablet (Angiotensin II receptor antagonists) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
7) (Levemir 100units/ml Solution for Injection) and (Toprol-XL 25mg Extended-Release Tablet) interact. Interaction: Levemir 100units/ml Solution for Injection (Insulin) effectiveness may be reduced due to aggravation of underlying condition by Toprol-XL 25mg Extended-Release Tablet (Beta-blockers) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
8) (Amiodarone Hydrochloride 200mg Tablet) and (Amlodipine Besylate 5mg Tablet) interact. Interaction: Amiodarone Hydrochloride 200mg Tablet (Amiodarone Hydrochloride) increases effect of Amlodipine Besylate 5mg Tablet (Amlodipine) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
9) (Novolin R 100units/ml Solution for Injection) and (Toprol-XL 25mg Extended-Release Tablet) interact. Interaction: Novolin R 100units/ml Solution for Injection (Insulin) effectiveness may be reduced due to aggravation of underlying condition by Toprol-XL 25mg Extended-Release Tablet (Beta-blockers) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
10) (Amiodarone Hydrochloride 200mg Tablet) and (Atorvastatin Calcium 20mg Tablet) interact. Interaction: Amiodarone Hydrochloride 200mg Tablet (Amiodarone Hydrochloride) may have side effects increased by Atorvastatin Calcium 20mg Tablet (Atorvastatin) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
11) (Atorvastatin Calcium 20mg Tablet) and (Protonix 40mg Delayed-Release Tablet) interact. Interaction: Atorvastatin Calcium 20mg Tablet (Atorvastatin) may increase the serum concentration of Protonix 40mg Delayed-Release Tablet (Pantoprazole Sodium) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
12) (Novolin R 100units/ml Solution for Injection) and (Losartan Potassium 25mg Tablet) interact. Interaction: Novolin R 100units/ml Solution for Injection (Insulin) has its effect increased by Losartan Potassium 25mg Tablet (Angiotensin II receptor antagonists) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
13) (Novolog 100unit/ml Solution for Injection) and (Toprol-XL 25mg Extended-Release Tablet) interact. Interaction: Novolog 100unit/ml Solution for Injection (Insulin) effectiveness may be reduced due to aggravation of underlying condition by Toprol-XL 25mg Extended-Release Tablet (Beta-blockers) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
14) (Amlodipine Besylate 5mg Tablet) and (Toprol-XL 25mg Extended-Release Tablet) interact. Interaction: Amlodipine Besylate 5mg Tablet (Calcium-channel blockers) have an additive effect with Toprol-XL 25mg Extended-Release Tablet (Beta-blockers) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
15) (Losartan Potassium 25mg Tablet) and (Levemir 100units/ml Solution for Injection) interact. Interaction: Losartan Potassium 25mg Tablet (Angiotensin II receptor antagonists) has its effect increased by Levemir 100units/ml Solution for Injection (Insulin) The use of these medications together may result in unintended clinical effects. Depending on the clinical situation, alterations in therapy may be required. The patient should be monitored for possible manifestations of the interaction. OKed by: Adelaida Alfonso, RN
16) (Amiodarone Hydrochloride 200mg Tablet) and (Losartan Potassium 25mg Tablet) interact. Interaction: Amiodarone Hydrochloride 200mg Tablet (Amiodarone Hydrochloride) may have its serum concentration increased by Losartan Potassium 25mg Tablet (Losartan Potassium) The use of these medications together does not usually result in clinically signficant interactions. Alterations in therapy or monitoring are not usually required. OKed by: Adelaida Alfonso, RN

Patient is allergic to: "Penicillin G Potassium 20,000,000unit Powder for Injection"
Based on information entered into ExitCare/ExitMeds, the following Drug Allergies were found:
1) ASPIRIN EC 81 MG 81 MG TBEC allergic reaction with Custom/unknown drug NOT checked for allergies OKed by: Adelaida Alfonso, RN
2) GLUCERNA SHAKE LIQD allergic reaction with Custom/unknown drug NOT checked for allergies OKed by: Adelaida Alfonso, RN

ACCESS SRECIAL CHEMISTRY

FERRITIN — 07/13/2016 5:27

Test	Result	Flag	Reference Range	Unit of Measure
FERRITIN	252		23 - 336	ng/mL

FOLATE (FOLIC ACID) — 07/13/2016 5:27

Test	Result	Flag	Reference Range	Unit of Measure
FOLIC	21.05		4.6 - 22.3	ng/mL

Based on method comparison between the current and restandardized Access Folate assays, Beckman Coulter anticipates patient samples will shift upward by approximately 30 to 45%.

PSA (PROSTATE SPECIFIC ANTIGEN — 07/13/2016 5:27

Test	Result	Flag	Reference Range	Unit of Measure
PSA	4.30	H	0 - 4.0	ng/mL

THYROID STIMULATING HORMONE — 07/12/2016 14

MINIVIDAS SPECIAL CHEM

PROCALCITONIN 07/12/2016 14

Test	Result	Flag	Reference Range	Unit of Measure
PCT	<0.05		0.0 - 0.50	ng/mL

PCT Concentration	Interpretation
<0.5 ng/mL	Low risk of severe sepsis and/or septic shock
>2.0 ng/mL	High risk of severe sepsis and/or septic shock.

Nevertheless, concentrations < 0.5 ng/mL do not exclude an infection, on account of localized infections (without systemic signs) which can be associated with such low concentrations, or a systemic infection in its initial stages (<6 hours). Furthermore increased procalcitonin can occur without infection. PCT concentrations between 0.5 and 2.0 ng/mL should be interpreted taking into account the patient's history. It is recommended to retest PCT within 6-24 hours if any concetrations <2 ng/mL are obtained.

Performing Location: LARKIN COMMUNITY HOSPITAL
7031 SW 62ND AVE.
SOUTH MIAMI, FL 33143

Assessments

Iron deficiency anemia
Anemia of chronic disease
Essential hypertension
Cerebrovascular accident
Hyperlipidemia
Malignant melanoma of skin
Atrial fibrillation
Diabetic - poor control
Replacement of aortic valve
Coronary artery bypass graft
Coronary arteriosclerosis

Plan

1. CAD s/p CABGx1/AV replacement, post op day #25
-Per Dr. Michel, patient's case was discussed with Dr. Concepcion whose recommendation was to continue patient on aspirin for anticoagulation
-1800 cal/low sodium/low fat diet
-Continue Toprol 25mg tabs PO Daily
-Continue Norvasc 5mg PO daily
-Continue Lovenox 40 mg SQ Daily
-Continue Aspirin 81mg tabs PO Daily

2. A/fib
-Continue home medication of amiodarone 200 mg daily

3. Diabetes Mellitus (improved control)
-Accucheck Q6HR
- Last accuchecks are 218, 169, 112, 137, 120, 189
-Continue Levemir 34 units
-Novolog R 20 units TID
-Continue Novolin R on moderate SS
-Continue strict monitoring of Glucose
-1800 cal/low sodium/low fat diet

4. Anemia of Chronic Disease (Normocytic Anemia)
-MCV 89.9, Fe 15 low, Ferritin 252 WNL, TIBC 200 Low
-Continue ferrous sulfate 325mg tab PO daily
-currently asymptomatic

5. Coronary Artery Disease
-Continue Toprol 25mg tabs PO Daily
-Continue Aspirin 81mg tabs PO Daily

6. Hypertension
- Monitor bp q8hrs, last VS were bp 137/63, HR 80.
-Cozaar currently at 50 mg PO daily
-Norvasc 5mg PO daily
-Low sodium diet

7. Malignant Melanoma
-Heme/Onc consult with Dr. Dominguez recommended further axillary lymph node dissection with follow up outpatient at Mount Sinai following discharge from hospital

8. Dyslipidemia
-Continue Atorvastatin 20mg QHS PO

9. Renal function monitoring

Admission History and Physical

Larkin Community Hospital

Name	Pearlman, Louis J	Date of Service	Jul-11-2016 2100	DOB	Jun-19-1954 (M)
Attending	MICHEL GEORGE J MD	Admitted	Jul-11-2016	Encounter	743953
Primary	MICHEL GEORGE J MD	Discharged	-	MRN	309861

Addendum

Patient will need for now DVT prophylaxis - Lovenox 40 mg sq daily
GI prophylaxis- Protonix 40mg daily.

Will monitor glucose level for critical labs and provide mild level of hydration IV by NS 70 ml/h continuously. Patient DM and hydration management will be re-evaluated and adjusted according to his labs and physical exam.

Electronically signed by ZAMOTA YURIY RESDI on Jul-11-2016 2309

Chief Complaint

Evaluation and observation s/p CABGx1/aortic valve replacement.
Patient resting in the bed, looks guarded and complaining of "im weak and hungry"

Last known as asymptomatic

Patient last asymptomatic (Date/Time) Jun-28-2016 @ 0000

HPI / Subjective

Patient was a direct admit to the ICU bed 6 and was notified about admission by day team FM. Patient started to be evaluated and admitted by senior night team resident doctor Yuriy Zamota and resident doctor Jesse Kemmerlin.

Patient well known at Larkin Community hospital and was seen on 05/2015 for Right axillary lymph node dissection for metastatic melanoma. Per previous records, one sentinel lymph node was positive for malignant melanoma.

Patient is a 62 year old male federal inmate with a PMHx of uncontrolled diabetes mellitus, CAD, malignant melanoma of back, dyslipidemia, history of atrial fibrillation and possible history of MI, was a direct admit to Larkin ICU from UM hospital for observation and evaluation s/p cardiac surgery. Patient was seen and examined at bedside AAOx3 resting comfortably in NAD. History was obtained via chart review of paperwork sent by UM hospital. Patient his a history of penicillin allergy.

On 06/28/2016, patient underwent procedure of CABG of aortic to posterior descending artery, aortic valve replacement with bovine pericardial bioprosthesis, and intraoperative transesophageal ultrasound by Dr. Donald Williams, MD at University of Miami hospital.

Post op day 1, patient was significant for hyperkalemia and hypermagnesemia. Plan was noted to rule out multiple sclerosis.

On 07/05, right upper extremity pain and acute limb ischemia was ruled out by US Doppler arterial.

On 07/06 per note, evidence of extensive white matter disease of the brain whether this is related to demyelinating disease or severe chronic leukomalacia. It was also noted that patient had normal sinus rhythm on monitor with no complaints, surgical wounds intact with no drainage and external pacing was removed.

On 07/07, per medication list patient received dextrose 50% and glucagon for hypoglycemic treatment. We are unable to exclude poor control of glucose with high and low levels to critical values.

On 07/08, patient's blood pressure of 134/60, Temperature 98.1, Pulse rate 69, respiratory rate of 20, glucose of 167 (am). Also per that note, patient was receiving Levemir 25 HS, Regular insulin at 18U, 12U, 12U ACHS respectively. Per chart review, discharge from UM medications include Insulin mild ss,Toprol 25mg PO daily, Amiodarone 200mg PO Daily, Amlodipine 5mg PO daily, Atorvastatin 20mg PO HS, and Hydrochlorothiazide 25mg PO daily.

Home Medications

Levemir 25 HS
Regular insulin at 18U, 12U, 12U ACHS respectively
Toprol 25mg PO daily
Amiodarone 200mg PO Daily
Amlodipine 5mg PO daily
Atorvastatin 20mg PO HS
Hydrochlorothiazide 25mg PO daily.

Peripheral Vascular/Extremities

Negative For: Cold extremities, Peripheral cyanosis, Edema of upper extremity, Venous ulcer of leg, Red extremities, Homans' sign, Edema of lower extremity, Gangrene, Discoloration of skin

Patient received arterial work up for right upper extremity at UM hospital which returned negative for findings. Physical examination today, without diminished pulses.

Neurological

Normal cranial nerves

CN II-XII grossly intact. Documentation from previous hospital noted plan to workup for leukomalacia vs multiple sclerosis.

Psychiatric

Stable, Apathetic
Negative For: Inappropriate behavior, Inappropriate affect, Euphoria, Agitated, Anxiety, Angry

Skin/Integumentary

General Skin Appearance

Skin appearance normal, Normal capillary filling
Negative For: Nonpitting edema, Pitting edema, Dehydrated, Diaphoresis, Telangiectasis

PMHx positive for malignant melanoma workup.

Skin Color

Pink

Skin Temperature

Warm

Skin Lesions

Lesions - Shape/Appearance

Examination of the skin on patient's back, negative for skin findings.

No lesions noted on patient's back.

Lesions - Pattern

None

Lymphatic

Lymphadenopathy absent

PMHx noted for lymph node dissection, lymph nodes must be evaluated on a regular basis.

Nails

Normal

Comments

Physical examination positive for guarded behavior, generalized weakness and mild level of chest pain after surgery. Despite history of melanoma, no lymphadenopathy or skin lesions noted.

Lab Results

Currently, unavailable. Will monitor as soon as labs become available.

12 lead EKG - pending
Chest X ray - pending

Assessments

Coronary arteriosclerosis
Coronary artery bypass graft
Replacement of aortic valve
Diabetic - poor control

Plan

Patient admitted to ICU bed 6 under Dr. George Michel.

Low sodium diet
Bed privileges
Elopement precautions
HOB 45 degrees
Fall precautions
Monitor vital signs and O2 sat continuously.

1. CAD s/p CABGx1/aortic valve replacement
- low sodium diet
- continue previous medications:
Toprol 25mg PO daily
Amiodarone 200mg PO Daily
- Cardiology evaluation by Dr. Concepcion

2. Diabetes mellitus - poorly controlled
- Continue Levemir 25mg HS
- Continue Novolin R mild SS
-monitor blood glucose via ACC Q6H
- If glucose is uncontrollable, consider Endocrinology evaluation.

3. Hypertension
- Continue medication from previous institution:
Amlodipine 5mg PO daily
Hydrochlorothiazide 25mg PO daily.

4. Dyslipidemia
-Continue medication from previous institution:
Atorvastatin 20mg PO HS

5. Leukomalacia/Multiple sclerosis/CVA history
-Evaluation neurology exam at regular basis.
-Consider
neurological evaluation if any neurological findings will be positive.
6. Malignant melanoma of the back
-No findings noted on physical examination
-Consider dermatology evaluation on need basis level.

Consultations

Cardiology - Dr. Concepcion
OT/PT evaluation
Nutrition consult

PEARLMAN, LOUIS J
MRN: 309861
ACCT: 743953

GILBERTO CONCEPCION, M.D.

CARDIOLOGY CONSULTATION

DOS: 07/12/2016

REFERRING PHYSICIAN: Dr. George Michel.

Louis Pearlman is a 62-year-old white male with a history of metabolic syndrome as well as malignant melanoma with previous resection of his back, underwent one-vessel aortic bypass graft surgery to the right coronary artery and aortic valve replacement with a Bovine pericardial bioprosthesis valve due to his severe aortic stenosis. The patient was transferred to Larkin Hospital for postop care. The patient denies any chest pain. There is some soreness over the sternal wound. However, no dyspnea, palpitations, diaphoresis. He also denies any orthopnea, paroxysmal nocturnal dyspnea, lower extremity edema or claudication. The patient had postoperative atrial fibrillation, for which he was treated with amiodarone and currently he is in sinus rhythm.

PAST MEDICAL HISTORY: History of coronary artery disease, aortic stenosis, chronic systemic arterial hypertension, insulin-dependent diabetes mellitus, dyslipidemia, malignant melanoma. He had a CVA six years ago.

PAST SURGICAL HISTORY: He had a resection of melanoma of his back with right axillary lymph node dissection due to metastatic melanoma. He is status post one-vessel CABG and aortic valve replacement with a Bovine bioprosthetic valve on June 28, 2016 at University of Miami Hospital. He has had tonsillectomy.

GILBERTO CONCEPCION, M.D.

CARDIOLOGY CONSULTATION

DOS: 07/12/2016

ALLERGIES: To penicillin.

PERSONAL/SOCIAL HISTORY: Nonsmoker, nondrinker. No history of recreational drug use. The patient is incarcerated and is a prison inmate.

FAMILY HISTORY: His father died of myocardial infarction.

MEDICATIONS: He is on Levemir, amiodarone, Toprol, amlodipine, atorvastatin, hydrochlorothiazide.

REVIEW OF SYSTEMS:
DERMATOLOGIC: No pruritus or rashes.
MUSCULOSKELETAL: He has some soreness overlying his anterior chest.
PULMONARY: No hemoptysis or cough.
NEUROLOGIC: No seizure disorder, headaches or diplopia.
CARDIOVASCULAR: No chest pain, dyspnea, palpitations.
GASTROINTESTINAL: No nausea, vomiting, melena or hematochezia.
GENITOURINARY: No dysuria or hematuria.

PHYSICAL EXAMINATION:
GENERAL: Reveals a middle-aged white male who is awake, alert, and oriented, in no apparent distress.
HEAD: Atraumatic and normocephalic. Eyes: PERRLA. EOMI. Conjunctiva pink and non-injected. Sclerae white and anicteric. ENT: Unremarkable.
NECK: Supple. No evidence of JVD at a 45-degree angle. There are no palpable masses, lymphadenopathy or thyromegaly appreciated. Carotid upstrokes are 2+ bilaterally without the presence of bruits.
CHEST: Reveals equal excursion of both hemithoraces. No chest wall deformity or tenderness. There is a well-healed mid-sternotomy surgical scar.
LUNGS: Clear to auscultation and percussion.

MRN: 309861
ACCT: 743953

GILBERTO CONCEPCION, M.D.

CARDIOLOGY CONSULTATION

DOS: 07/12/2016

CARDIAC EXAM: The PMI was not localized. S1 and S2 are regular. No S3 or S4 gallop. There are no parasternal lifts, precordial heaves, pericardial rubs, midsystolic clicks or diastolic murmurs. There is a grade 1/6 systolic murmur along the left sternal border.
ABDOMEN: Protuberant, soft, and nontender. Bowel sounds are normoactive. There are no palpable masses or viseromegaly.
EXTREMITIES: Reveal no cyanosis, clubbing or edema. The patient has freckles throughout both upper and lower extremities.
NEUROLOGIC EXAMINATION: Grossly intact.

CARDIAC DATA: Electrocardiogram reveals normal sinus rhythm, T wave inversions in V1 through V5.

IMPRESSION:
1. Atherosclerotic heart disease, coronary artery disease. The patient is status post CABG, single vessel to the posteriorly sitting artery branch of the right coronary artery.
2. Status post aortic valve replacement due to aortic valvular stenosis with a Bovine bioprosthetic valve. This was done in University of Miami hospital on June 28, 2006 by Dr. Tom Williams.
3. Abnormal electrocardiogram.
4. Chronic systemic arterial hypertension, presently controlled.
5. Diabetes mellitus.
6. Dyslipidemia.
7. Central obesity.

CARDIOLOGY CONSULTATION

DOS: 07/12/2016

8. Metabolic syndrome.
9. History of CVA, six years ago.
10. History of melanoma over the back with resection as well as metastatic melanoma with actually dissection in 2015 and that was right axillary lymph node dissection.
11. Postoperative atrial fibrillation, the patient remains in sinus rhythm, currently on oral amiodarone.

PLANS AND RECOMMENDATIONS: The patient is currently in the telemetry unit bed. We will monitor symptoms, rhythm, and hemodynamics closely. I would recommend continuation of his amiodarone, although this will be for several months postoperatively if he remains in sinus rhythm. I will continue his current combination antihypertensive therapy consisting of Toprol, amlodipine as well as oral statin. I did recommend discontinuing hydrochlorothiazide at the present time. The patient should also be on a daily aspirin for antiplatelet activity. Lastly, he should continue increasing his activities with postoperative cardiac rehab here at the hospital. Additionally, the patient should also continue to adhere to restricted 2 g sodium, low-fat 1800-calorie diet.

CARDIOLOGY CONSULTATION

DOS: 07/12/2016

ALLERGIES: To penicillin.

PERSONAL/SOCIAL HISTORY: Nonsmoker, nondrinker. No history of recreational drug use. The patient is incarcerated and is a prison inmate.

FAMILY HISTORY: His father died of myocardial infarction.

MEDICATIONS: He is on Levemir, amiodarone, Toprol, amlodipine, atorvastatin, hydrochlorothiazide.

REVIEW OF SYSTEMS:
DERMATOLOGIC: No pruritus or rashes.
MUSCULOSKELETAL: He has some soreness overlying his anterior chest.
PULMONARY: No hemoptysis or cough.
NEUROLOGIC: No seizure disorder, headaches or diplopia.
CARDIOVASCULAR: No chest pain, dyspnea, palpitations.
GASTROINTESTINAL: No nausea, vomiting, melena or hematochezia.
GENITOURINARY: No dysuria or hematuria.

PHYSICAL EXAMINATION:
GENERAL: Reveals a middle-aged white male who is awake, alert, and oriented, in no apparent distress.
HEAD: Atraumatic and normocephalic. Eyes: PERRLA. EOMI. Conjunctiva pink and non-injected. Sclerae white and anicteric. ENT: Unremarkable.
NECK: Supple. No evidence of JVD at a 45-degree angle. There are no palpable masses, lymphadenopathy or thyromegaly appreciated. Carotid upstrokes are 2+ bilaterally without the presence of bruits.
CHEST: Reveals equal excursion of both hemithoraces. No chest wall deformity or tenderness. There is a well-healed mid-sternotomy surgical scar.
LUNGS: Clear to auscultation and percussion.

CARDIOLOGY CONSULTATION

DOS: 07/12/2016

CARDIAC EXAM: The PMI was not localized. S1 and S2 are regular. No S3 or S4 gallop. There are no parasternal lifts, precordial heaves, pericardial rubs, midsystolic clicks or diastolic murmurs. There is a grade 1/6 systolic murmur along the left sternal border.
ABDOMEN: Protuberant, soft, and nontender. Bowel sounds are normoactive. There are no palpable masses or viseromegaly.
EXTREMITIES: Reveal no cyanosis, clubbing or edema. The patient has freckles throughout both upper and lower extremities.
NEUROLOGIC EXAMINATION: Grossly intact.

CARDIAC DATA: Electrocardiogram reveals normal sinus rhythm, T wave inversions in V1 through V5.

IMPRESSION:
1. Atherosclerotic heart disease, coronary artery disease. The patient is status post CABG, single vessel to the posteriorly sitting artery branch of the right coronary artery.
2. Status post aortic valve replacement due to aortic valvular stenosis with a Bovine bioprosthetic valve. This was done in University of Miami hospital on June 28, 2006 by Dr. Tom Williams.
3. Abnormal electrocardiogram.
4. Chronic systemic arterial hypertension, presently controlled.
5. Diabetes mellitus.
6. Dyslipidemia.
7. Central obesity.

GILBERTO CONCEPCION, M.D.

CARDIOLOGY CONSULTATION

DOS: 07/12/2016

8. Metabolic syndrome.
9. History of CVA, six years ago.
10. History of melanoma over the back with resection as well as metastatic melanoma with actually dissection in 2015 and that was right axillary lymph node dissection.
11. Postoperative atrial fibrillation, the patient remains in sinus rhythm, currently on oral amiodarone.

PLANS AND RECOMMENDATIONS: The patient is currently in the telemetry unit bed. We will monitor symptoms, rhythm, and hemodynamics closely. I would recommend continuation of his amiodarone, although this will be for several months postoperatively if he remains in sinus rhythm. I will continue his current combination antihypertensive therapy consisting of Toprol, amlodipine as well as oral statin. I did recommend discontinuing hydrochlorothiazide at the present time. The patient should also be on a daily aspirin for antiplatelet activity. Lastly, he should continue increasing his activities with postoperative cardiac rehab here at the hospital. Additionally, the patient should also continue to adhere to restricted 2 g sodium, low-fat 1800-calorie diet.

BOP FOIA 2016-07384

Patient Name: Louis, Pearlman
MR Number: 309861
Acct Number: 743953
Date of Study: 07/11/2016
DOB: 06/19/1954
Exam Description: XR CHEST 1 VIEW
DX: chest pain after surgery

FINAL REPORT

INDICATION: Chest pain after surgery.

TECHNIQUE: Portable AP radiograph of the chest was obtained.

COMPARISON: 05/20/2015

FINDINGS:

Patient is post OP for cardiac valve replacement.

AP view of the chest demonstrates clear lungs without focal consolidations or effusions. No pneumothorax or pulmonary nodules are appreciated. The cardiomediastinal silhouette is prominent. The osseous and soft tissue structures are unremarkable. There is interval placement of midline sternotomy wires and right-sided PICC line with tip projecting into the anatomical area of superior vena cava.

IMPRESSION:

No acute cardiopulmonary process. Interval placement of a midline sternotomy wires and a right-sided PICC line with tip projecting into the anatomical area of superior vena cava.

HPI / Subjective

62 yo male presented to LCH from federal prison complaining of dizziness and shortness of breath. Pt is s/p coronary bypass x1 and aortic valve replacement 6/2015 at UM and has a recent admission to LCH for cardiac rehab. Pt was brought back to LCH due to dizziness and SOB.

He was seen and examined this morning at bedside. He is AA0x3. He has asthenia, but denies chest pain, dyspnea, abd pain, constipation, diarrhea, hematuria, dysuria. Patient had a TEE this morning done by cardiologist Dr. Dylewski. He was found to have vegetations in the aortic and mitral valves. He tolerated the procedure well. At this point patient is pending transfer to UM for continuation of his medical care for bacterial endocarditis. Patient has been treated with Vancomycin, ID Dr. Mendez Mullet has changed antibiotic treatment to Daptomycin.

Objective

Physical Exam

AA0x3, NAD, resting in bed at 45 degree angle

Assessments

Endocarditis
Decompensated cardiac failure
Paroxysmal atrial fibrillation
Hypokalemia
Dizziness
Diabetes mellitus
Normocytic anemia
Acute injury of kidney
Weakness present
Dyspnea
Acute respiratory distress

Plan

1) Endocarditis
- WBC 8.4
- Blood cultures x2 3/4 bottles + Staphylococcus lugdunensis
- Daptomycin IV 700 MG q 24 hrs per ID recommendations
- Dr. John Dylewski Cardiologist performed TEE this morning that showed vegetations in the aortic and mitral valve.
- Patient is pending transfer to UM for continuation of his medical care

BOP FOIA 2016-07384

Progress Note

Larkin Community Hospital

Name	Pearlman, Louis J	Date of Service	Aug-04-2016 2136	DOB	Jun-19-1954 (M)
Attending	MICHEL GEORGE J MD	Admitted	Jul-28-2016	Encounter	745421
Primary	MICHEL GEORGE J MD	Discharged	Aug-05-2016	MRN	309851

2) Generalized weakness
-Most likely secondary to bacterial endocarditis
-Trop x 3 negative
-CXR: no acute cardiopulmonary process
-EKG T wave inversion and PR prolongation, no changes from previous EKG on last admission last month.
-Echo: preliminary report shows LV EF of 50% with mild diastolic impairment. No pericardial effusion. Previous ECHO 4/9/2015 limited normal chamber sizes preserved LV systolic function EF: 55% no stenosis no MVP no pericardial effusion
-Consulted cardiology Dr. Ortiz
- Put patient on Telemetry
- continue PT/OT
- Previous TSH in July 2016 was WNL

3) AKI
- BUN 24.1, Cr 1.5
- Will re-evaluate CBC and BMP in AM
- NS 0.9% at 75 cc/hour

4) Normocytic anemia
-likely secondary to chronic disease
-Hb 8.7, hct 24.3 today
-Continue ferrous sulfate 325mg tab PO daily
-Continue to monitor daily. Pt denies any active bleeding.

5. Paroxysmal Afib
- pt had only one episode of afib s/p CABG
-CHADSVASC: 4
-Continue home medication of amiodarone 200 mg daily
-Per cardiology recs at previous admission, continue ASA 81 MG daily PO

6. Diabetes Mellitus (improved control)
-Accucheck ACHS
-Continue Levemir 34 units
-Novolog R 20 units TID
-Continue Novolin R on moderate SS
-Continue strict monitoring of Glucose
-Low fat/Diabetic diet

7. Hypokalemia
- K 3.6 today in the am
- Repeat K level in the morning
- Klor-kon 20 meq if needed
- continue to monitor

8. Hypertension- controlled
-Monitor vitals q6hrs
- Continue Norvasc 5 mg QD
-Low fat/Diabetic diet

9. CVA (old CVA 2010)
-Continue with aspirin 81 mg and statin QDaily
-Continue to monitor for neurological deficits

10. Musculoskeltal shoulder pain
- Tylenol 650 q 6 hrs PRN
- Will assess pain in next visit

INFECTIOUS DISEASE PROGRESS NOTE

DOS: 08/04/2016

Case was discussed with the team, they have informed me that the transesophageal echo is positive at this point in time. The patient looks to have endocarditis.

VITAL SIGNS: Heart rate is 63.

ALLERGIES: Allergic to penicillin.

MEDICATIONS: See MAR.

ANTIBIOTICS: Vancomycin IV.

PHYSICAL EXAM:
LUNGS: Clear.
CARDIOVASCULAR: Positive for murmur.
ABDOMEN: Soft.
EXTREMITIES: Showed no clubbing, cyanosis or edema.

LABORATORIES: Chemistry shows a glucose of 180, BUN 24, creatinine 1.5, sodium 132, potassium 3.7, chloride 102, bicarb 23 and a calcium of 8.

IMPRESSION: Endocarditis.

PLAN: I am going to DC the vancomycin.

Cubicin 700 mg IV q.24h.

I am just going to go ahead for now and again stress the need to get this gentleman transferred back to the University of Miami. He needs a followup with the physicians that did his cardiac surgery.
We will begin to discuss transfer and discharge planning with Dr. Michel.

HPI / Subjective

62 yo male presented to LCH from federal prison complaining of dizziness and shortness of breath. Pt is s/p coronary bypass x1 and aortic valve replacement 6/2015 at UM and has a recent admission to LCH for cardiac rehab. Pt was brought back to LCH due to dizziness and SOB.

Patient seen and examined this morning. Patient reported feeling well. He admitted to fatigue overnight. He is tolerating PO, urinating well. Patient with decreased ambulation.

Objective

Physical Exam

Gen AOx3 NAD
Car RRR murmurs to left sternal border 2/4 systolic
Pul CTAB
GI soft non tender non distended
Skin warm and dry. cap refill <2sec, no splint hematomas, no ostar nodes noted.

Vital Signs

Aug-05-2016 1601
T 97.8, RR 18, BP 121/51, PULS2 58

Assessments

Endocarditis
Paroxysmal atrial fibrillation
Normocytic anemia
Acute injury of kidney
Acute respiratory distress
Decompensated cardiac failure

Plan

1. Infective endocarditis
Patient with infective endocarditis s/p replacement. Patient with blood cultures positive for Staph Lugdunesis. ID has changed Vancomycin for Daptomycin at this point. Dr. Raul Ros from UMH has been contacted and has accepted the transfer of the patient. Patient is pending bed availability at UMH for transport. Patient requires a higher level of care. Transfer is priority at this point. He is hemodynamically stable. TEE echo demonstrating Severe aortic stenosis and MV/ AV valve vegetation. EF 50%
- Transfer to UMH.
- Continue current care

2. Acute on chronic kidney injury
Patient with increased BUN and creatine during since re-admission. Patient is producing a good amount of urine. Started patient on gentle hydration. LVEF 50%. He is tolerating PO hydration well.
- NS at 60ml/hr
- Trend renal function

TRANSESOPHAGEAL ECHOCARDIOGRAM REPORT

DOS: 08/04/2016

PREPROCEDURE DIAGNOSIS: Significant bacteremia.

POSTPROCEDURE DIAGNOSIS: Aortic and mitral valve endocarditis.

OPERATIVE SURGEON: John R. Dylewski, M.D.

REFERRING PHYSICIAN: George Michel, M.D.

CLINICAL INFORMATION: The patient is a 62-year-old gentleman who presents and was found to have severe bacteremia. The patient would now undergo a transesophageal echocardiogram for further evaluation.

PROCEDURE:
1. Transesophageal echocardiogram.
2. Color and spectral Doppler study.
3. Telemetry monitoring.
4. Conscious sedation with oximetry monitoring.

PROCEDURE: After informed consent was obtained, the patient was brought to the procedure suite. Sedation was achieved with Versed 3 mg and fentanyl 25 mcg intravenous in divided doses with continuous oximetry and hemodynamic monitoring. Subsequently, the oral cavity was anesthetized with topical anesthetic spray. A transesophageal probe was passed into the esophagus without complications.

JOHN DYLEWSKI, M.D.

TRANSESOPHAGEAL ECHOCARDIOGRAM REPORT

DOS: 08/04/2016

Multiple echocardiographic images were obtained of all cardiac tumors and valves. Detailed Dopplers studies for atrial appendages. Atrial appendage was not well visualized. Subsequently, aorta was studied. The probe was then removed from the esophagus, and the patient was allowed to awake from sedation. He tolerated the procedure without any complications.

ESTIMATED BLOOD LOSS: Zero.

FINDINGS:
1. Telemetry monitor revealed sinus rhythm throughout the duration of study.

Blood pressure range between 104/23 mmHg to 115/30 mmHg, heart rate in the 90s.

2. Cardiac chambers: Right atrium was enlarged measuring 5.4 cm in diameter without evidence of mass or thrombi. The left atrium was mildly enlarged measuring 4.6 cm in diameter without evidence of mass or thrombi. The left atrial appendage was not well visualized.

The right ventricle was normal in size and systolic function. The left ventricle is normal in size and systolic function with estimated ejection fraction of approximately 50%. There are no mass or thrombi. There is no significant pericardial effusion. There is no evidence of an atrial or ventricular septal defect.

ACCT: 745421

JOHN DYLEWSKI, M.D.

TRANSESOPHAGEAL ECHOCARDIOGRAM REPORT

DOS: 08/04/2016

3. Cardiac valves: The tricuspid valve appeared to be normal without evidence of vegetations and there was mild tricuspid regurgitation. A gradient was not obtained.

The pulmonic valve with normal structure, leaflet thickness and excursion with evidence of mild pulmonic insufficiency. There are no vegetations attached to this valve. The aortic valve was a prosthetic tissue valve with evidence of very finely attached vegetations to the ventricle side of the aortic valve. They were highly mobile.

Clinical correlation is highly recommended.

There was at least mild aortic insufficiency.

The mitral valve was normal in structures. The leaflet thickness was mildly thickened. There was a large vegetation on the anterior mitral valve leaflet at its attachment to the mitral ring measuring 0.7 cm at its greatest dimensions. It was multilobar and mobile. This is highly consistent with the patient's clinical course and is consistent with a vegetation. There was at least mild mitral regurgitation. Clinical correlation is highly recommended.

4. The aorta was normal in dimension _____.

CONCLUSION:
1. Bivalvular bacterial endocarditis involving both aortic and mitral valve.
2. Mild-to-moderate insufficiency of the aortic and mitral valves.
3. Preserved ejection fraction.

COMMENTS AND RECOMMENDATIONS: This patient will require intensive therapy for his underlying infection. He needs to be managed from an Infectious Disease standpoint aggressively and requires afterload reduction to prevent further decompensation secondary to valvular insufficiency. Consideration for a cardiothoracic surgery evaluation is recommended in the event that the patient has decompensation. Further recommendation will be forthcoming.

INFECTIOUS DISEASE PROGRESS NOTE

DOS: 08/05/2016

The patient is seen and examined at bedside. Chart was reviewed in detail. Case was discussed with the nursing staff at length.

This is a 62-year-old male seen from an Infectious Disease standpoint due to history of endocarditis. At this time the patient is on Cubicin. No acute events reported in the past 24 hours.

ALLERGIES: Penicillin.

MEDICATIONS: See MAR.

ANTIMICROBIALS: Cubicin 700 mg IV daily.

VITAL SIGNS: Temperature 97.7, pulse 58, respirations 19, blood pressure 133/58.

PHYSICAL EXAM:
LUNGS: Clear.
CARDIOVASCULAR: Positive for murmur.
ABDOMEN: Soft.
EXTREMITIES: No clubbing, cyanosis or edema.

LABORATORY DATA: No laboratory data from today.

IMPRESSION: Endocarditis.

PLAN: At this time the patient is to continue with Cubicin. The patient is pending at this time transfer to the University of Miami for possible surgical intervention due to the patient's endocarditis.

DISCHARGE SUMMARY

DOS: 08/05/2016

ADMITTING DATE: 07/26/2016

DISCHARGE DATE: 08/05/2016

Mr. Louis Pearlman is a 62-year-old male patient admitted to Larkin Community Hospital with admitting diagnoses of:
1. Acute and subacute infective endocarditis.
2. Anemia.
3. Leukocytosis.
4. Type-2 diabetes mellitus.
5. Hypocalcemia.
6. Hypertension.
7. Coronary artery disease.
8. Paroxysmal atrial fibrillation.

HISTORY OF PRESENT ILLNESS: Mr. Pearlman is a 62-year-old male patient who presented to Larkin Community Hospital from the Federal Prison, complaining of dizziness and shortness of breath. The patient is a prisoner. The patient has been admitted at this time with acute and subacute infective endocarditis.

PAST MEDICAL HISTORY: The patient has a history of hyperlipidemia, malignant melanoma of the back, diabetes mellitus, cerebrovascular accident, hypertensive disorder.

For admitting medications, please refer to MAR.

Please be advised, the patient is allergic to penicillin.

DISCHARGE SUMMARY

DOS: 08/05/2016

The consultants in this case are Dr. Luis Mendez-Mulet, Dr. John Dylewski.

On 07/30/2016, the patient has been seen. The chart has been reviewed. The patient is seen today at bedside by PCP and medical resident and student. The patient is in no acute distress, alert, oriented x3, stable and uncooperative with exam. The patient reported feeling well rested. The patient deny any fever, dizziness, chest pain, shortness of breath at this time or any urinary or interstitial issues. The patient's vital signs today show blood pressure of 124/69, pulse rate 80, respiration rate 18, temperature 98.6. Labs show glucose of 134.2, BUN 24, creatinine 1.54. Sodium 131, potassium 3.5, chloride 97, carbon dioxide 25, calcium 8.3. WBCs 9.9, RBC 3.15, hemoglobin 9.2, hematocrit 26.0, platelet count 249.

On 08/02/2016, Dr. Mendez-Mulet saw and evaluated the patient. The patient is seen today at bedside. The patient today denies any shortness of breath, nausea, vomiting or diarrhea. No headaches, no dizziness, no chest pain. The patient as part of his workup, blood culture was performed as 3/4 with gram-positive cocci in the blood. The patient's vital signs today show blood pressure of 106/56, heart rate 73, temperature 98.1. Chemistry shows a glucose 133, BUN of 30, creatinine 1.8. Sodium 130, potassium 3.7, chloride 98, bicarbonate 23, calcium 8.

On 08/04/2016, Dr. John Dylewski saw and evaluated the patient. At this point in time, after obtaining informed consent, the patient is going to be taken for a procedure. The procedure at this time is:
1. Transesophageal echocardiogram.
2. Color and spectral Doppler study.

3. Telemetry monitoring.
4. Conscious sedations and oximetry monitoring.

Postoperative diagnoses: Aortic and mitral valve endocarditis. After the procedure, patient tolerated the procedure well and was taken to recovery room stable.

DISCHARGE SUMMARY

DOS: 08/05/2016

On 08/05/2016, the patient has been seen today at bedside. The patient chart reviewed. Case was discussed with the staff. The patient at this time is on Cubicin. No acute events reported over the past 24 hours. The patient is stable, afebrile. The patient today is going to be transferred to the University of Miami for possible surgical intervention due to patient's endocarditis.

For discharge medications, please refer to MAR.

This information has been provided to the patient and caretaker. The patient today is going to be transferred to the University of Miami Hospital for possible treatment of endocarditis. Please be advised, this information has been provided to the patient and caretaker. The patient was discharged today back to the University of Miami for further treatment and evaluation. Please be advised, the patient needs to follow up with a PCP within 3 to 10 days from discharge date.

Discharge diagnoses are as follows:
1. Acute and subacute infective endocarditis.
2. Anemia in other chronic disease.
3. Type-2 diabetes mellitus.
4. Hypokalemia.

APPROVED REPORT

EXAM: Comprehesive 2D, Doppler, and color-flow Echocardiogram.

INDICATION
S/P CABG

2D Dimensions
LVOT Diameter 2.1 (1.8-2.4cm)

M-Mode DIMENSIONS
LVEF(%) 50 (;50%)

Aortic Valve
AoV Peak Vel. 327 m/s

Left Ventricle
The left ventricle is normal size. Due to the poor quality of the echocardiogram, the left ventricular ejection fraction cannot be assessed. LV thickness not well seen Regional wall motion is not well visualized. Regional wall motion abnormalities cannot be excluded. Mild diastolic dysfunction is present (impaired relaxation pattern). LVEF is estimated to be 50%.

Right Ventricle
The right ventricle is normal size. The right ventricular systolic function is normal.

Atria
The left atrium size is normal. The right atrium size is normal.

Aortic Valve
Aortic valve is not well visualized. Aortic valve replaced (bovine) Aortic valve area is at 0.89cm2 with a pressure gradiant of 42mmhg Severe aortic stenosis. No aortic regurgitation is present.

Mitral Valve
Mitral valve is not well visualized. Mild mitral regurgitation.

Tricuspid Valve
Tricuspid valve is not well visualized. There is no tricuspid valve regurgitation noted.

BOP FOIA 2016-07384

Pulmonic Valve
The pulmonary valve is normal in structure. There is no pulmonic valvular regurgitation.

Great Vessels
The aortic root is normal in size.

Pericardium
There is no pericardial effusion.

Other Information
Study Quality: Technically Limited
Technically limited study due to poor acoustic windows

;Conclusion;
Due to the poor quality of the echocardiogram, the left ventricular ejection fraction cannot be assessed.
Regional wall motion is not well visualized.
Regional wall motion abnormalities cannot be excluded.
LVEF is estimated to be 50%.
Mild diastolic dysfunction is present (impaired relaxation pattern).
LV thickness not well seen
Aortic valve is not well visualized.
Aortic valve replaced (bovine)
Aortic valve area is at 0.89cm2 with a pressure gradiant of 42mmhg
Severe aortic stenosis.
Mitral valve is not well visualized.
Mild mitral regurgitation.
Tricuspid valve is not well visualized.
There is no pericardial effusion.

DOB: 06/19/1954
Exam Description: XR CHEST 1 VIEW
DX: dizziness

FINAL REPORT

INDICATION: Dizziness.

TECHNIQUE: Portable AP radiograph of the chest was obtained.

COMPARISON: Chest x-ray dated 07/11/2016.

FINDINGS:

AP view of the chest demonstrates clear lungs without focal consolidations or effusions. No pneumothorax or pulmonary nodules are appreciated. The cardiomediastinal silhouette is within normal limits. Overlying sternotomy wires are present. The osseous and soft tissue structures are unremarkable.

IMPRESSION:

No acute cardiopulmonary process.

Assessments

Hypokalemia
Diabetes mellitus
Paroxysmal atrial fibrillation
Normocytic anemia
Acute injury of kidney
Weakness present
Acute respiratory distress
Decompensated cardiac failure
Dyspnea
Dizziness

Plan

1. Generalized weakness
-Most likely secondary to chronic deconditioning after recent CABGx1 and aortic valve replacement.
-Trop x 3 negative
-CXR: no acute cardiopulmonary process
-EKG: showed no changes from previous EKG on 7/16
-Echo: preliminary report shows LV EF of 50% with mild diastolic impairment. No pericardial effusion. Previous ECHO 4/9/2015 limited normal chamber sizes preserved LV systolic function EF: 55% no stenosis no MVP no pericardial effusion
-Consulted cardiology
-continue to monitor on tele
-continue PT/OT

- Previous TSH in July 2016 was WNL

2. AKI
-8/1/16 BUN 19.5, Creatinine 1.3
-Will re-evaluate CBC and BMP in the morning.

3. Leukocytosis
- WBC 11.6 decreased from 12.4 yesterday
-UA and Urine culture ordered
- Procalcitonin 2.52
- CXR ordered
- Blood cultures x2 ordered
- Monitor CBC in the morning

4. Normocytic anemia
-likely secondary to chronic disease
-Hb 8.9, hct 25.3, MCV 81.9
-Continue ferrous sulfate 325mg tab PO daily
-Continue to monitor daily. Pt denies any active bleeding.

5. Paroxysmal Afib
- pt had only one episode of afib s/p CABG
-CHADSVASC: 4
-Continue home medication of amiodarone 200 mg daily
-Per cardiology recs at previous admission, continue ASA

6. Diabetes Mellitus (improved control)
-Accucheck ACHS
-Glucose 184 at admission
-Continue Levemir 34 units
-Novolog R 20 units TID
-Continue Novolin R on moderate SS
-Continue strict monitoring of Glucose
-Low fat/Diabetic diet

7. Hypokalemia (resolved)
- K 4.1
-continue to monitor

8. Hypertension- controlled
-Monitor vitals q8hrs , BP currently 122/66, HR 75
-Continue Cozaar 50 mg QD and Norvasc 5 mg QD
-Low fat/Diabetic diet

9. CVA (old CVA 2010)
-Continue with aspirin 81 mg and statin QDaily
-Continue to monitor for neurological deficits

HPI / Subjective

62 yo male presented to LCH from federal prison complaining of dizziness and shortness of breath. Pt is s/p coronary bypass/aortic valve replacement 6/2015 and has a recent admission to LCH for cardiac rehab. Pt was brought back to LCH due to dizziness and SOB after walking and getting up.

Patient was seen and examined today at bedside. He is AA0x3, he c/o dizziness and dyspnea. He denies chest pain, fever, nausea, emesis, constipation, diarrhea, cold or heat intolerance, hematuria, dysuria, hematochezia, melena. His last bowel movement was this morning. Bp taking at bedside is 110/62. He c/o pain in his shoulders b/l and back, patient asking for Tylenol PRN for this pain.

Objective

Physical Exam

Patient is AA0x3, NAD, posture is sitting on bed leaning forward, appears short of breath.

Vital Signs

Aug-02-2016 1707
T 97.3, RR 18, BP 112/60, PULS2 64

PE - General

Awake, Alert, Oriented to time, Oriented to place (finding), Oriented to person
Positive For: Mentally alert.
Negative For: Respiratory Distress, Disorientation, Coma, Lethargic, Delirium, Distress, Somnolence, Stupor

PE - Skin/Integumentary

Skin Moisture

Moist Skin

Skin Color

Pink skin

PE - Respiratory

No adventitious sounds, Decreased breath sounds
Positive For: SOB - Shortness of breath.
Negative For: Accessory Muscle Use, Stridor, Tachypnea, Rales, Rhonchi, Wheezing, Barrel chest

PE - Cardiovascular

Regular, Heart sounds (Present S1 and S2)
Negative For: Bradycardia, Tachycardia

PE - Abdomen

Soft (Soft), Flat
Positive For: Obese.
Negative For: Abdominal mass, Hernia, Distention, Tenderness, Bruit

PE - Peripheral Vascular

Pulse (2+ b/l UE radial), Warm skin
Negative For: Petechiae of skin, Ischemic, Loss of hair, Edema of lower extremity

Other Results

CXR- No acute cardiopulmonary process

Assessments

Hypokalemia
Diabetes mellitus
Paroxysmal atrial fibrillation
Normocytic anemia
Acute injury of kidney
Weakness present
Acute respiratory distress
Decompensated cardiac failure
Dyspnea
Dizziness

Plan

1) Leukocytosis
- WBC 12.7 today, 12.3 yesterday
- CMP, CBC ordered
- Blood cultures x2 collected
- UA WNL
- Amylase and Lipase
- CXR no acute cardiopulmonary process
- Start Vancomycin per pharmacy protocol, Can not do Zosyn because patient allergy to Penicillin.
- ID Dr. Mendez Mullet has been consulted

2) Generalized weakness
-Most likely secondary to chronic deconditioning after recent CABGx1 and aortic valve replacement.
-Trop x 3 negative
-CXR: no acute cardiopulmonary process
-EKG
-Echo: preliminary report shows LV EF of 50% with mild diastolic impairment. No pericardial effusion. Previous ECHO 4/8/2015 limited normal chamber sizes preserved LV systolic function EF: 55% no stenosis no MVP no pericardial effusion
-Consulted cardiology
-continue to monitor on tele
-continue PT/OT
- Previous TSH in July 2016 was WNL

3) AKI
- BUN 27.3, Cr 1.4
- Will re-evaluate CBC and BMP in the morning.

4) Normocytic anemia
-likely secondary to chronic disease
-Hb 9, hct 26.9 today

PROGRESS NOTE

DOS: 08/02/2016

SUBJECTIVE: Atrial fibrillation, status post coronary artery bypass graft, coronary artery disease.

HISTORY OF PRESENT ILLNESS: The patient remains generally ill. He was found sitting up on a recliner. He continues with shortness of breath with minimal to moderate exertion. BUN and creatinine continue elevated.

OBJECTIVE: Vital signs: Blood pressure 110/62, heart rate 68, respiratory rate 18, temperature 97.7.

LABS: Glucose 148, BUN 30, creatinine 1.76, sodium 128. WBC 12.2, hemoglobin 9.1, hematocrit 25.5, platelet count 276. Chest x-ray that was done yesterday shows no focal consolidation, no pleural effusion.

PHYSICAL EXAM:
GENERAL: Ill-looking male. No distress noted. Obese.
HEENT: Eyes: Pupils are equal, round, reactive to light. Nose: No epistaxis noted.
NECK: Supple. No JVD.
HEART: S1, S2, irregular rhythm.
LUNGS: Diminished breath sounds in bilateral lower lobes. Even and unlabored breathing.
ABDOMEN: Bowel sounds x4. Soft, nontender, nondistended.

ASSESSMENT: Congestive heart failure, shortness of breath, atrial fibrillation, coronary artery disease.

PLAN: We will continue treatment and monitor labs. We will continue to monitor cardiovascular status.

INFECTIOUS DISEASE CONSULT

DOS: 08/03/2016

The patient is a 62-year-old male seen through the Federal Prison System. He is status post valve replacement. He comes in now, he states that he just basically is feeling weak, run down. As part of his workup blood culture performed, he as 3/4 with gram-positive cocci in the blood.

PAST MEDICAL HISTORY: The patient has a past medical history of atrial fibrillation, aortic valvular disease.

PAST SURGICAL HISTORY: Positive for an aortic valve replacement.

SOCIAL HISTORY: He is an inmate seen through Correction.

FAMILY HISTORY: Noncontributory.

VITAL SIGNS: Temperature is 98.1, heart rate 73, blood pressure 106/56.

PHYSICAL EXAM:
HEENT: Showed normocephalic, atraumatic. Pupils are equal, round and reactive to light. He has got a bounded carotid but no JVD.
LUNGS: Clear.
CARDIOVASCULAR: Regular rate and rhythm. Normal S1, S2. No murmur, gallops or rubs.
ABDOMEN: Soft.
EXTREMITIES: Showed no clubbing, cyanosis or edema.

LABORATORIES: Chemistry shows a glucose of 133, BUN of 30, creatinine 1.8, sodium 130, potassium 3.7, chloride 98, bicarb 23 and a calcium of 8.
